Stephen Viele, Chairman
Town of Florida Planning Board
Town of Florida Town Hall
214 Fort Hunter Road
Amsterdam, New York 12010

Re: BMG Albany, LLC – Amazon Warehouse/Distribution Facility
NYS Route 5S, Town of Florida, Montgomery County, NY (SBL # 54-1-36)

Dear Chairman Viele and Members of the Planning Board:

This firm represents BMG Albany, LLC ("BMG") with respect to its amended applications to the Planning Board (the "Planning Board") for the development of the above-referenced parcel on NYS Route 5S in the Town (the "Property") with an advanced e-commerce logistics and distribution center with a building footprint of 652,060 square feet (consisting of five floors with approximately 3.2 million square feet of gross floor area) (the "Project").

Amended Site Plan Review and Special Permit approvals are required from the Planning Board for the Project pursuant to the Town of Florida Zoning Ordinance (the "Zoning Ordinance") and NYS Town Law §§ 274-a and 274-b. Accordingly, an application for the Project was made to the Planning Board in January 2025, followed by a supplemental submission in February 2025.

To support the Planning Board's SEQRA review of the Project, BMG has prepared and respectfully submits the enclosed site plans and extensive SEQRA documentation in support of the application for the Project. This submission includes a binder with narratives and studies and

attached site plans entitled "MSV1 Amazon Distribution Facility, SEQRA Expanded Environmental Assessment Form and Narrative."

As requested by the Planning Board Secretary, we are emailing a digital copy of the entire submission to her. Ten binder sets of our full submission (except for the SWPPP and Preliminary Site Assessment) with attached, folded maps will be delivered to the Planning Board Secretary as specified. If you would like additional electronic or hard copies of the submission, please let me know.

At the Planning Board's May 5th meeting, we respectfully ask that the Board formally establish itself as SEQRA lead agency for coordinated environmental review of the Project, since the 30-day period for other agencies to object to the Board's February 5, 2025 Notice of Intent to serve as SEQRA lead agency has expired. See 6 NYCRR § 617.6(b)(3)(i).

We look forward to the Planning Board's continued review of the Project at the May 5th meeting. Please let me know if you have any questions on the materials submitted.

Very truly yours,

/s/ David R. Everett

VI. CONCLUSION

I. PROPOSED ACTION

BMG Albany, LLC ("BMG") is proposing to develop property between N.Y.S. Route 5S ("Route 5S") and the New York State Thruway ("I-90") with an e-commerce logistics, storage and distribution facility on lands comprising approximately 137.24± acres in the Town of Florida (the "Town"), Montgomery County, New York (the "Project" or "MSV1"). The Project will be served by a new electric substation (the "Substation") to be separately owned by the user and operated by National Grid pursuant to an easement.

The Project will be entirely built in the Town's Commercial ("C-2") zoning district on SBL # 54-1-36 (the "Project Site"), where warehouse/distribution centers are an allowed use subject to Special Permit and Site Plan approvals by the Town of Florida Planning Board (the "Planning Board") pursuant to the Town's Zoning Ordinance. Accordingly, to meet the needs of a new, specific user, BMG applied to the Planning Board for approval of MSV1 in January 2025, which together with a supplemental submission on February 20, 2025 and this SEQRA Expanded EAF submission comprise the Application for MSV1.

As discussed further below, the proposed Project represents an amendment to a warehouse/distribution center project (the "2019 Project") that was conditionally approved by the Planning Board in December 2019, after the Board's determination pursuant to the New York State Environmental Quality Review Act and its implementing regulations in 6 NYCRR Part 617 (collectively, "SEQRA") that the project would not have any significant adverse impacts on the environment. For that project, the Planning Board issued a conditional Special Use Permit and granted conditional Site Plan Review approval for the proposed approximately 1,000,000 square foot ("SF") warehouse/ distribution center.

Project Description

MSV1 will have a footprint of approximately 652,000 SF with five stories and a total floor area of approximately 3.2 million SF. See Appendix 4, Site Plans. Each story will provide floor space for operational needs, along with associated office space on the mezzanine level. The height of the building will be 103.5'. As proposed, the facility will meet the user's objective of a multi-story e-commerce logistics, storage and distribution facility that maximizes the scale and efficiency of operations within a substantially smaller footprint than the footprint that was previously approved by the Planning Board for the 2019 Project.

The multi-story facility is designed with lower floor-to-ceiling distances due to lower storage heights of bins operated by robots. This results in a more efficient design for the total amount of square-footage without wasted space. The extra floors not only add space to keep a larger amount of goods on hand close to customers in the distribution area, but they also provide the floor area required for the state-of-the-art equipment and robotics required to efficiently facilitate the storing, picking, and packaging of customer orders. The upper floors are strategically designed to optimize the building's height and use gravity to route inventory to the distribution system on the first floor for outbound shipments.

There is no feasible alternative to the requested building height for MSV1 that meets the user's goals for an e-commerce logistics, storage and distribution facility with enough useable square footage to provide the required scale and maximum efficiency for its operations. The only feasible way to achieve the goal of approximately 3.2 million SF of floor space that will meet Project 's scale, operational and logistics needs is through the proposed 5-story, 652,000± SF footprint building.

Spreading the building's footprint to reduce the height of the building would cause logistical issues and adversely impact the operational efficiency of MSV1, preventing the defined user from achieving its goals. It would substantially increase impacts to the 16.5± acres of wetlands on the Project Site, as compared to the 1.8± acres of wetlands that will be impacted by MSV1. Moreover, spreading the 3.2 million SF of floor space horizontally over the Project Site would require substantial area variances for lot coverage and building coverage and would not be feasible in any case because of the lack of required space on the Project Site for parking, internal driveways, stormwater controls, etc. See Appendix 4, Site Plans. Further, any reduction of the Project's floor space would prevent MSV1's user from achieving its operational requirements. Finally, the costs of constructing a shorter facility that provides the required approximately 3.2 million SF of floor space, along with the substantially increased operational costs associated with a much less efficient design, are not economically feasible.

Accessory features proposed for MSV1 include 2 guard shacks (with 1 operating seasonally); 990 car parking spaces (including 8 motorcycle parking spaces); 417 trailer stalls and 59 loading docks; 2 water storage tanks; stormwater management practices and improvements; site driveways; lighting, landscaping; signage; and other related improvements. Once constructed, operational activities will take place within the proposed building in a secured environment that is not open to the public.

Access to and from Project Site will occur from three driveways along Route 5S. Primary access by passenger vehicles only would be provided from the center driveway, across from the eastern driveway from the existing Target distribution facility. BMG proposes to install a new traffic signal at this driveway intersection, with the addition of a new left-hand turn lane onto the Site, which will improve traffic conditions on Route 5 once the Project is operational. To the west of the primary driveway, a second driveway for trucks will provide a stop-controlled, full-movement intersection with Route 5S. The third driveway, to the east of the primary driveway, will be stop-controlled and provide right-in/right-out access only. This driveway will primarily be used by passenger vehicles, however, it will also be used for trucks leaving the Project Site during limited seasonal peak periods. Overall, it is anticipated that this design will reduce potential impacts from the Project on the Route 5S corridor and adjacent properties by providing efficient access and appropriate on-site circulation.

To connect MSV1 to public water and sewer, new service laterals will be connected to the existing Town of Florida water and sewer mains located along Route 5S. The Project Site is located within existing water/sewer districts. Water will be provided to the Project for both potable and fire service purposes.

MSV1 will be built on vacant lands between Route 5S and I-90. As described above, traffic from the Project would enter onto Route 5S, an established east/west state highway with a direct connection via N.Y.S. Route 30 ("Route 30") to I-90 approximately 1.5 miles away to the east through a mostly commercial corridor. MSV1's layout is oriented towards I-90, with the building and parking areas located as far away from adjoining properties as possible. As

discussed below, through the Project's design, including site layout, set-backs, architecture and landscaping, impacts to surrounding lots and the environment will be minimized while supporting the Town's long-term planning objectives to locate commercial/industrial development in the C-2 zoning district along the Route 5S corridor next to I-90.

Finally, MSV1 will result in substantial local benefits with minimal impact on local services due in significant part to the Project's use of Routes 5S/30, state-maintained highways, for access to I-90. These benefits would include:

- Substantial building permit fees for the Project paid to the Town;
- Creation of a minimum of 300 construction jobs through the construction of the Project;
- Creation of a minimum of 750 permanent jobs with full comprehensive benefits and educational opportunities, plus hundreds of part-time and seasonal jobs;
- Productive use of a vacant industrial site in the C-2 zoning district long-targeted for industrial development;
- Significant increase in the taxable value of the Project Site, with a total capital investment in excess of several hundred million dollars;
- Indirect employment resulting from the build-out of Project ;
- Local procurement opportunities for small businesses;
- Ancillary economic output due to employment and construction; and
- Positive impact creating substantial new opportunities with fiscal benefits supporting local public schools and community infrastructure.

II. BACKGROUND

In 2019, as discussed above, a SEQRA negative declaration and conditional approvals were granted by the Planning Board for the 2019 Project. The Planning Board's conditional Special Permit and Site Plan Review approvals of the 2019 Project remain valid, allowing for the development of the 1,000,000± SF warehouse/distribution center as previously approved by the Planning Board once all conditions of the approvals are satisfied. However, a new, preferred user has been identified by BMG for the project that is prepared to move forward with construction of MSV1 based on timely receipt of amended approvals. Accordingly, the successful development of the Project Site for MSV1 requires the proposed amendments of the conditionally approved Special Permit and Site Plan for the 2019 Project by the Planning Board.

III. SEQRA COMPLIANCE

SEQRA Review of MSV1 is Required

Even though there was an extensive, prior SEQRA review of the 2019 Project by the Planning Board that was coordinated with other agencies, the amended Project's potential environmental impacts must be reviewed pursuant to SEQRA. Pursuant to 6 NYCRR § 617.6(a)(1)(iv), "as soon as an agency receives an application for...approval of an action, it must … make a preliminary classification of the action as Type 1, Type 2 or Unlisted." This "preliminary classification" assists agencies in determining whether a full Environmental Assessment Form ("FEAF") and coordinated review are necessary.

For the Planning Board, review of the amended Project is the SEQRA "action" based on the application submitted by BMG. Because the amended Project involves the disturbance of

over 10 acres of land, the Planning Board has properly classified it as a Type 1 action pursuant to 6 NYCRR § 617.4(b)(i). As a result, coordinated environmental review of MSV1 is required under SEQRA. For this submission, BMG has completed an updated Part 1 of the FEAF which is attached as Appendix 5. It has also submitted this expanded EAF narrative to discuss the environmental criteria listed in Part 2 of the FEAF consistent with the scope of the Planning Board's SEQRA review as discussed below. Finally, this submission includes the evaluation of the potential impacts of MSV1 on a nearby designated Disadvantaged Community ("DAC") based upon proposed amendments by NYSDEC to the SEQRA regulations and the criteria in the FEAF Part 2. The Project Site is not located in the DAC but traffic from the Project will travel through the DAC to and from I-90. A DAC report for MSV1 is attached as Appendix 20.

SEQRA requires agencies to make a determination as early as possible in the review process as to whether the involved action has the potential to have a significant adverse impact on the environment. Pursuant to 6 NYCRR § 617.6(b)(2), when more than one agency is involved in the review of a Type 1 action, this determination must be made by a "lead agency" that is normally the agency principally responsible for approving the action. After a coordinated review, if the SEQRA lead agency issues a negative declaration concluding that the action will not have a significant adverse impact on the environment, then that negative declaration is binding upon all other involved or interested agencies.

The Planning Board had previously served as SEQRA lead agency with respect to its review of the 2019 Project. At its February 2025 meeting, the Planning Board stated its intention to continue to serve as SEQRA lead agency for review of Project and notice of that intent was circulated to other involved and interested agencies identified in the FEAF Part 1. At its May 2025 meeting, it is anticipated that the Planning Board will establish itself as SEQRA lead agency for the coordinated environmental review of MSV1.

On December 12, 2019, the Planning Board issued the Negative Declaration for the 2019 Project after its review of the project's potential environmental impacts, concluding that no significant adverse environmental impacts would occur and that no environmental impact statement would be required. See Appendix 1. Thereafter, the Planning Board granted conditional approval of the 2019 Project, foreclosing any amendment or recission of the Negative Declaration pursuant to 6 NYCRR §§ 617.7(e) and (f), respectively.

Pursuant to 6 NYCRR § 617.6(b)(3)(iii), the Negative Declaration for the 2019 Project remains binding upon the Planning Board and other involved and interested agencies with respect to the 2019 Project. See Appendix 1. The approved site plan for the 2019 Project is attached as Appendix 2.

Accordingly, the appropriate scope of SEQRA review of amended MSV1 is limited to the review of any additional or different impacts that may occur from the Project, as compared to the 2019 Project. To the extent that the Project has the same or less impacts than the 2019 Project, the Planning Board is constrained by its prior Negative Declaration. This narrative compares and evaluates the potential impacts of the modified Project with those of the 2019 Project in the prior Negative Declaration. The chart comparing the two projects' site plans, attached as Appendix 6, provides much of the information that the Planning Board needs in order to properly evaluate whether any additional or different impacts from MSV1 may result in a significant adverse environmental impact that requires preparation of an environmental impact statement.

Finally, as required by recently enacted New York State law regarding SEQRA review, this submission provides an evaluation of whether MSV1 "may cause or increase a disproportionate pollution burden on a disadvantaged community"[1] While the Project Site is not in an area that has been designated by New York State as a disadvantaged community ("DAC"), it is adjacent to a DAC and its traffic will travel through a DAC to I-90, triggering this new, additional SEQRA review requirement.

IV. INVOLVED AND INTERESTED AGENCIES

In the FEAF Part 1, BMG identified the following agencies that may be involved or interested in the environmental review and approval of MSV1:

Town of Florida Town Board;
Town of Florida Highway Department;
Montgomery County Planning Department;
Montgomery County Health Department;
Montgomery County Industrial Development Agency;
NYS Department of Environmental Conservation, Region 4 ("NYSDEC");
NYS Department of State;
NYS Office of Parks, Recreation and Historic Preservation ("SHPO"); and
NYS Department of Transportation, Region 1 ("NYSDOT").

V. EVALUATION OF POTENTIAL ENVIRONMENTAL IMPACTS

The SEQRA lead agency must consider the criteria for determining the significance of potential environmental impacts from the Project as set forth in the SEQRA regulations at 6 NYCRR § 617.7(c). To accomplish this, the lead agency reviews all relevant information and completes Parts 2 and 3 of the FEAF to provide the basis for its SEQRA determination.

For MSV1, the identification and assessment of potential environmental impacts based on FEAF Part 2 (including the proposed FEAF Part 2 criteria for DACs) is discussed below. Based on the following discussion, it is BMG's opinion that MSV1's potential impacts are consistent with those of the 2019 Project as previously reviewed by the Planning Board in its 2019 SEQRA Negative Declaration. Accordingly, MSV1 will not create any significant adverse environmental impacts, and it is respectfully submitted that a Negative Declaration is warranted under SEQRA.

[1] Recent developments to SEQRA review procedures in and around environmental justice communities have expanded the scope of SEQRA review in designated DACs. In 2023, SEQRA was amended to add to the criteria for whether an action may require an EIS "whether it may cause or increase a disproportionate pollution burden on a disadvantaged community" (see 2023 N.Y. ALS 49, 2023 N.Y. Laws 49, 2023 N.Y. Ch. 49, 2023 N.Y. AB 1286). The law took effect on December 30, 2024, and covers impacts from all forms of "pollution," as the term is defined in ECL 1-0303. In January 2025, NYSDEC proposed changes to 6 NYCRR Part 617 and the FEAF Part 2 to implement the amendments to SEQRA: https://dec.ny.gov/regulatory/regulations/proposed-emergency-recently-adopted-regulations/state-environmental-quality-review-act-regulatory-revisions. The public comment period for these proposed amendments remains open until May 7, 2025.

1. Impact on Land

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Land.

MSV1's potential for impacts on Land are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Land.

Consistent with the 2019 Project, based upon review of the FEAF Part 2, MSV1 will involve construction on land where depth to water table is less than 3 feet; slopes are 15% or greater; and bedrock is exposed, or generally within 5 feet of existing ground surface. Further, it is expected that construction of the Project will take 18-24 months. As discussed below, however, none of these potential impacts will result in any significant adverse impacts and, critically, the Project will not result in any increased erosion.

It is not anticipated that the Project will involve the excavation and removal of significant amounts natural material from the Project Site. Any topsoil that cannot be reused for landscaping purposes and/or other rock or unsuitable soils, if any, will be stockpiled on Site in accordance with the Site Plans.

As was the case for the 2019 Project, construction of MSV1 will require the removal of shallow bedrock through a combination of ripping via a large track mounted backhoe and controlled blasting. Where blasting is determined to be necessary, it would be completed in accordance with all applicable state and federal regulations. At a minimum, the blasting protocol will include preparing pre-blast surveys; preparing a blasting plan; performing the work within regulatory limits for vibration and overpressure (noise); field monitoring for vibration and overpressure using seismographs; and maintaining logs of the drilling and blasting work. A figure in Appendix 7 containing the Geotechnical Engineering Report shows the area of potential blasting on the Site and land within 500' of the area. There are no sensitive receptors within the area of blasting or within 500' of the area.

The Project will involve impacts to 1.8± acres of wetlands "where depth to water table is less than 3 feet." In comparison (See Appendix 6), the 2019 Project involved impacts to 6.5± acres of wetlands, which were approved pursuant to an individual permit issued by the U.S. Army Corps of Engineers ("USACE") that is included as Appendix 2. MSV1, which will involve 4.7± less acres of wetland impacts than the 2019 Project, will be undertaken in accordance with the USACE wetlands permit that was recently renewed. See Appendix 2. In other areas of the Site, perched groundwater may be encountered, which may require dewatering measures and/or diversion ditches that will be undertaken in accordance with the Project's Geotechnical Engineering Report (Appendix 7). Finally, the Project will also require grading and/or filling involving "slopes of 15% or greater" in some areas of the Project Site (particularly the southwestern portion) where those steep slopes exist, in order achieve the elevations required for construction of the Project.

As discussed in Impact on Surface Water below, all Project construction will be undertaken in accordance with the approved Stormwater Pollutions Prevention Plan ("SWPPP") for MSV1 in order to prevent impacts from erosion. See Appendix 8. During Project construction, erosion and sediment control, soil stabilization, dewatering and pollution prevention measures will be installed, implemented and maintained on the Property as set forth

in the SWPPP to minimize the discharge of erosion of sediment and prevent a violation of the State's water quality standards.

Finally, while MSV1 is anticipated to require 18-24 months for completion of construction after receipt of all required approvals, this is entirely consistent with the expected construction time for the 2019 Project that was previously considered by the Planning Board. Construction will be limited to daylight hours and will not occur on Sundays or major holidays. Furthermore, construction traffic onto and leaving the Site will be minimized due to the limited amount of material expected to be excavated and removed from the Site.

Accordingly, for the foregoing reasons, MSV1 will not result in any significant adverse environmental impacts on Land.

2. Impact on Geological Features

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Geological Features.

As reflected in the FEAF Part 1 for MSV1 (See Appendix 5), there are no unique landforms on the Project Site that will be impacted by MSV1. Accordingly, MSV1 will not have any significant adverse impact on Geological Features.

3. Impact on Surface Water

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Surface Water.

MSV1's potential for impacts on Surface Water are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Surface Water.

Consistent with the 2019 Project, based upon review of the FEAF Part 2, MSV1 will involve construction within a freshwater wetland and has the potential to "cause soil erosion, or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies" and to "affect the water quality of any water bodies within or downstream of the site."

As discussed above, MSV1 will involve impacts to 1.8± acres of wetlands "where depth to water table is less than 3 feet."[2] The 2019 Project involved impacts to 6.5± acres of wetlands (See Appendix 6), which were approved pursuant to a permit issued the U.S. Army Corps of Engineers ("USACE") that is included as Appendix 2. MSV1 will thus involve 4.7± less acres of wetland impact and will be undertaken in accordance with the USACE wetlands permit that was recently renewed. See Appendix 2.

Avoidance and/or mitigation of turbidity or erosion will occur through the Project's implementation of the SWPPP (See Appendix 8) which includes modern stormwater management controls designed to ensure that any stormwater discharged from the Project Site

[2] NYSDEC has confirmed that MSV1 is a transitional project that is not subject to the agency's revised wetlands jurisdiction

will meet NYSDEC water quality standards, both during and after construction, resulting in minimal impacts to surface waters. Stormwater from the Project will be managed, treated and discharged in accordance with the requirements set forth in the 2025 NYSDEC State Pollution Discharge Elimination System general stormwater permit and the Project's SWPPP, subject to prior review and oversight by the Town's engineer and continuing regulatory oversight and enforcement by NYSDEC. Stormwater will be collected and treated to protect water quality prior to discharge. As required by law, stormwater will be managed to control the rate of stormwater runoff to less than pre-development rates for a full range of storm events from the 1-year storm to the 100-year storm.

During the Project's construction, erosion and sediment control, soil stabilization, dewatering and pollution prevention measures will be installed, implemented and maintained on the Project Site as set forth in the SWPPP and as required by law to minimize the discharge of erosion of sediment and prevent a violation of the State's water quality standards. These mitigation measures are designed to limit erosion of land by controlling the flow of water until permanent stormwater control measures are installed and pervious surfaces are stabilized with vegetation and/or buildings and parking areas.

Measures will include, but not be limited to, installation of silt-fencing to control disturbed areas; stockpiling soils and vegetative soil stabilization; seeding and mulching of all disturbed surfaces; dust control (as necessary); and ongoing inspection and maintenance of erosion control measures to ensure their effectiveness until all disturbed surfaces are stabilized. The Project's SWPPP and Site Plans will comply with the requirements of NYSDEC General Stormwater Permit GP-0-25-001 and the adopted New York State Stormwater Management Design Manual, dated July 31, 2024.

Post-construction, MSV1's stormwater management system will collect stormwater run-off from the Project Site through a series of catch basins and pipes and convey the water to the proposed stormwater management areas (including surface and Floridaurface areas) depicted on the Project's Site Plans and in the SWPPP. Mitigation of potential impacts will occur through the treatment of sediments and other contaminants in the run-off as described in the SWPPP to ensure the stormwater discharges meet applicable water quality standards and have minimal impacts on the downstream water courses and wetlands. As required by the NYSDEC stormwater regulations, the peak rate of run-off from the Project Site will be essentially the same or less than the peak rate of run-off under the existing conditions.

As a result of these mitigation measures, potential surface water impacts from MSV1 will be significantly less than from existing conditions. By their nature, exposed soils and disturbed lands on the Project Site have greater potential for erosion and sedimentation in surface waters than the more stable status of the Project Site after the Project is constructed with its state-of-the-art stormwater controls.

Overall, MSV1's SWPPP and erosion and stormwater controls that will be undertaken during and post-construction will provide the same level of minimization of potential impacts on Surface Water and the same level of compliance with NYSDEC requirements as previously reviewed for the 2019 Project.

Based on the foregoing, the Project will not create any significant adverse environmental impacts on Surface Water.

4. Impact on Groundwater

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Groundwater.

MSV1's potential for impacts on Groundwater are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Groundwater.

The Project is estimated to require 65,000 gallons per day of water and to involve the discharge of 55,000 gallons per day of wastewater. BMG proposes to obtain water and wastewater services from the Town of Florida and to connect to existing water mains along Route 5S. BMG's engineer has provided a report on Water & Sewer Services for the Project (See Appendix 9), demonstrating that the Town should have sufficient capacity to provide these services.

The Project will not discharge wastewater into the ground. No subsurface disposal systems will be used on the Project Site. It should also be noted that the Project Site is not located over or adjoining any primary or principal aquifer, nor over or adjoining any aquifers used as a community drinking water source. The Project will not require any wells or involve the use of groundwater. See FEAF Part 1, Appendix 5.

Furthermore, stormwater run-off from the truck parking areas on the Project Site will be collected separately and treated as "hot-spot" areas as identified by NYSDEC stormwater regulations. These areas will be collected and discharged through a series of stormwater treatment practices suitable to treat stormwater from hot-spot areas in accordance with the NYSDEC Stormwater Design Manual. Hot-spot run-off is directed to onsite oil-water separators followed by hydrodynamic separator quality treatment structures and ultimately to a proposed stormwater extended detention wetland/pond to adequately clean and remove any potential contaminates prior to discharge.

A Phase 1 Preliminary Site Assessment ("PSA") conducted on the Property did not indicate the presence of any known or suspected current or historic sources of soil or groundwater contamination on the Project Site. See Appendix 10. The PSA identified miscellaneous non-hazardous debris on the Site which will be cleaned up during construction of the Project.

Finally, Project construction will not have any significant impact on groundwater, as demonstrated by the Geotechnical Report (See Appendix 7). The Geotechnical Report indicates that perched groundwater conditions may be encountered at some locations, which may require some limited dewatering as part of some excavations.

Based on the foregoing, the Project will not create any significant adverse impacts on Groundwater.

5. Impact on Flooding

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Flooding.

MSV1's potential for impacts on Flooding are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Flooding.

The Project will not have any significant adverse impacts on Flooding. As discussed in detail above and shown on the Site Plans, all storm water from the Site will be collected, managed and treated by a stormwater management system in accordance with the NYSDEC General SPDES permit for stormwater discharges and SWPPP. Also, the Federal Emergency Management Administration Flood Insurance Rate Maps ("FIRM") covering the Town of Florida show that the Property is located outside any designated floodway, 100-year floodplain or 500-year floodplain (See FIRM Map, Appendix 11).

Based on the foregoing, MSV1 will not create any significant adverse impacts on Flooding.

6. Impact on Air

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Air.

MSV1's potential for impacts on Air are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Air. The Project does not have any air emission sources that require permits or registrations. Further, as required by law truck idling for more than 5 minutes on the Project Site is prohibited and subject to enforcement by NYSDEC and other state and local police.

BMG also evaluated the potential for MSV1 to result in impacts on Air from on-site operations and vehicle and truck traffic. To evaluate the potential air quality impacts of MSV1, both at the Project Site and between the Project's driveway access onto Route 5S to the I-90 interchange, BMG prepared an air quality report (the "Study") attached as Appendix 12.

The Study estimated the projected future cumulative emissions from mobile sources (i.e., passenger vehicles and long-haul trucks) using Environmental Protection Agency ("EPA") approved modeling software and the traffic volume projections provided in the Traffic Impact Study ("TIS") for MSV1 discussed below. The TIS considered MSV1's mobile sources and other existing and projected sources based upon a 2027 expected operational timeframe for the Project. The air quality dispersion modeling results were compared to EPA's National Ambient Air Quality Standards ("NAAQS") to determine if there are potential air quality impacts to nearby sensitive receptors (i.e., local residential areas and schools).

The potential impacts of mobile source emissions on sensitive receptors focused on areas that would also be affected by MSV1's mobile sources. Specifically, these areas include the Routes 5S/30 corridor between the MSV1 site and I-90, areas of public access and residential areas along Routes 5S/30. Modelling receptors were conservatively placed along this corridor.

The surrounding area was reviewed for sensitive locations, such as schools, hospitals, and nursing homes, including a medical clinic located on Route 5S.

With respect to potential impacts on air quality from MSV1 and existing and projected mobile air emission sources along the Routes 5S/30 corridor to I-90, the Study found that projected emissions associated with mobile sources in 2027, added to background concentrations, would not result in an exceedance of the applicable air quality standards at any receptor locations, including at sensitive receptor locations. This includes from mobile sources operating on MSV1's site as well as between the Site and I-90 along the Routes 5S/30 corridor.

In addition to the analysis discussed above, the potential for cumulative air quality impacts from mobile sources on ozone was considered. Ozone is a colorless gas composed of three oxygen atoms, known chemically as O_3. It occurs both in the Earth's upper atmosphere and at ground level. Ground-level ozone is a major component of smog and poses health risks to humans, animals, and vegetation. The formation of ground-level ozone is a photochemical process involving precursor pollutants such as NO_X and volatile organic compounds ("VOCs").

The Study found that projected emissions of NOx associated with projected mobile sources in 2027, added to background concentrations, would not result in an exceedance of applicable air quality standards and therefore, projected contributions of NOx to the formation of ozone are expected to be minor. Additionally, the Study included consideration of four pollutants which are VOCs. These VOCs are projected to be below the respective regulatory thresholds; therefore, projected contributions of VOCs to the formation of ozone are also expected to be minor.

Based on the foregoing, it is not anticipated that MSV1 will have any significant adverse impact on Air.

7. Impact on Plants and Animals

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Plants and Animals.

MSV1's potential for impacts on Plants and Animals are consistent with those reviewed by the Planning Board for the 2019 Project and based on the Application habitat assessment provided as Appendix 13 will not have a significant adverse impact on Plants and Animals for the following reasons:

- The Project Site is located between Route 5S and I-90 and is predominantly a disturbed, open area providing minimal habitat for Plant and Animal species. The Site's potential habitat has been extensively disturbed by farming activities.
- Of the only 20± acres of forest on the Project Site, only 8± acres are proposed to be removed. Accordingly, there is limited terrestrial habitat on the Project Site that may potentially provide minimal habitat for large mammals.
- The 12± acres of freshwater wetlands on the Site, which will be minimally impacted by the Project, may provide habitat for small mammals. Terrestrial species may also utilize the freshwater wetlands on the Property for foraging, cover, or migration. All but 1.8± acres of the wetlands on the Site will remain intact as potential wetland habitat.

- State and federally protected species identified in the FEAF Part 1 and the USFWS IPaC GIS tool for the Project Site include Northern Long-eared Bats and Tri-colored Bats.
    - These protected bat species share the same overwintering and summer roosting habitat requirements. No overwintering habitat for protected bat species has been identified on the Project Site and minimal potential summer roosting habitat for bats was identified on the Project Site that would be impacted by tree clearing for MSV1. Since MSV1 will not involve any additional tree clearing of potential bat habitat than those projects based on the Project's site plans, no different or additional impacts to potential bat habitat on the Project Site will occur.
    - Any potential impacts to bats that may use the Project Site for summer roosting will be avoided by limiting any tree cutting to winter months from November through March.
- Monarch Butterflies are proposed for federal protection. The FEAF Part 1 for the Project indicates that potential preferred habitat for Monarch Butterflies (i.e., Meadows, grasslands or brushlands) will only decrease by approximately 4 acres as a result of the undertaking of the Project, minimizing the potential for impacts to this species. As mitigation, milkweed will be planted on the Project Site wherever possible. Also, other open field areas in the vicinity of the Project Site will continue to provide potential habitat for this species.
- General wildlife species are not anticipated to be significantly impacted by the Project as wildlife occurrences and habitation within the Project Site is expected to be very limited due to the existing uses and disturbed and open nature of the Site. Wildlife should be able to disperse to and use other nearby habitats.

For the foregoing reasons, MSV1 will not have any significant adverse impact on Plants and Animals.

8. Impact on Agricultural Resources

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Agricultural Resources.

MSV1's potential for impacts on Agricultural Resources are consistent with those reviewed by the Planning Board for the 2019 Project and will not have any significant adverse impact.

The impacts of MSV1 are mitigated by the location of the project between I-90 and Route 5S in a commercial/industrial zoning district designated by the Town for precisely the use proposed by BMG. The Town's Comprehensive Plan and zoning map reflect the community's priorities of protecting agricultural land in the Town through land use controls while also encouraging the development of lands in the C-2 district for commercial/industrial purposes. See Section17, Consistency with Community Plans below. Most of the land in the Town is zoned to encourage agricultural uses and, by contrast, lands in the C-2 zoning district only comprise a small portion of the Town.

For the foregoing reasons, MSV1 will not result in any significant adverse impact on Agricultural Resources.

9. Impact on Aesthetic Resources

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Aesthetic Resources.

MSV1's potential for impacts on Aesthetic Resources are generally consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Aesthetic Resources.

Consistent with the 2019 Project, based upon review of the FEAF Part 2, MSV1 will likely be visible from publicly accessible vantage points both seasonally (e.g., screened by summer foliage, but visible during other seasons) and year-round; and that visibility will occur during routine travel by residents, including to and from work and during recreational or tourism-based activities. As discussed below, however, none of these potential impacts will result in any significant adverse impacts for the following reasons:

- The Project is an allowed use under the Zoning Ordinance that will be located in a growing commercial/industrial zoning district in the Town, where some visibility of proposed uses similar to the Project is to be reasonably expected and is permitted by the Zoning Ordinance.
- Based on the FEAF Part 1 and the SEQRA Comparison Chart submitted in support of the Application, Project will be taller but will provide a smaller footprint than the 2019 Project.
- Overall, the Project Site is uniquely situated near the I-90 right-of-way and the Project Site's layout is purposefully oriented to be as far away as possible from residential uses to the north and east of the Project Site. Existing trees and other vegetation on the Project Site and adjacent properties, proposed landscaping, together with distance and topography, combine to reduce potential views of the Project Site from offsite residential uses.
- The Project will not be visible from any officially designated federal, state, or local scenic or aesthetic resources nearby, nor will it impact any officially designated scenic views.
- The Visual Impact Assessment submitted in support of the Application (See Appendix 15) sufficiently demonstrates that any potential visibility of the 103.5' tall building will not result in a significant adverse impact due to distance, topography and intervening vegetation. Further, any partial views of the Project by the traveling public will be short in duration along both highways, where vehicles are traveling at high speeds.
- To further minimize aesthetic impacts, based upon the Application a building design will be used for MSV1 that is more representative of a high-tech R&D production facility than a warehouse, with projecting first-floor glass entry elements at the office area, attractive paint schemes to add depth and character, varied roof lines on the amended Project's elevations, decorative aluminum composite material that will highlight the primary and secondary office entries, horizontal reveals to add dimension to the building's façade, and decorative parapets that include glass clerestory windows on the north and south elevations. This design and diverse paint scheme will make the building more visually appealing when viewed from off-site locations.

For the foregoing reasons, MSV1 will not have any significant adverse impacts on Aesthetic Resources.

10. Impact on Historic and Archeological Resources

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Historic and Archeological Resources.

MSV1's potential for impacts on Historic and Archeological Resources are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Historic and Archeological Resources.

The potential for impacts on Historical and Archeological Resources was thoroughly evaluated during the original review of the 2019 Project (See Appendix 16). Moreover, by letter of February 20, 2025, the NYS Historic Preservation Office determined that the development of the Project on the Site would not impact any Historic and Archeological Resources listed in or eligible for listing in the New York State and National Registers of Historic Places.

Based on the foregoing, MSV1 will not result in any significant adverse impacts on Historic and Archeological Resources.

11. Impact on Open Space and Recreation

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Open Space and Recreation.

MSV1's potential for impacts on Open Space and Recreation are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Open Space and Recreation.

MSV1 will not result in any loss of recreational opportunities, or any reduction of an open space resource designated in a governmental open space plan. The Project Site is located in a zoning district intended for commercial/industrial development such as the Project. The Project Site is privately owned and is not used for public recreation. Moreover, it is not designated by any governmental plans as open or recreation space.

Based on the foregoing, MSV1 will not have any significant adverse impact on Open Space and Recreation.

12. Impact on Critical Environmental Areas

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Critical Environmental Areas.

MSV1's potential for impacts on Critical Environmental Areas are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Critical Environmental Areas ("CEAs"). The Project Site does not contain any CEAs and there are no CEAs in the Town of Florida or Montgomery County.

Accordingly, MSV1 will not have any significant adverse impact on any CEA.

13. Impact on Transportation

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Transportation.

Based on the Traffic Impact Study ("TIS") prepared for MSV1 (See Appendix 17), MSV1's will not have a significant adverse impact on Transportation.

Site access is proposed via three driveway locations along the Project Site's approximately 4,000 feet of frontage on Route 5S. The primary access is the central driveway, proposed to intersect Route 5S opposite Target Drive East, and will be used by passenger vehicles only. This driveway will be full-movement and signalized to improve intersection operation. As discussed below, a traffic signal warrant analysis of the Route 5S and Target Driveway East intersection under future traffic conditions indicates that a signal is warranted for this intersection, which MSV1 will install subject to NYSDOT review and approval. The western driveway will be a stop-controlled full-movement intersection for trucks only. The eastern driveway will be used by passenger vehicles only except during limited seasonal peak periods when outbound site trucks may use it as well. The eastern driveway will be a stop-controlled right-in/right-out only access.

These three driveways are proposed in order to reduce onsite interaction between passenger vehicles and trucks. This layout provides for separate access to the parking area for trucks and the western driveway will also provide sufficient room for truck stacking before the guardhouse.

Further, due to site constraints and to avoid unnecessary impacts, the layout of the employee parking area results in the necessity of two access points, one on each end of the parking areas. Overall, this layout is expected to minimize impacts to the Route 5S corridor and adjacent properties by providing efficient access/egress and appropriate on-site circulation.

Offsite, the TIS evaluated the potential traffic impact of the Project on the Routes 5S/30 corridor and nearby roadways. Thee TIS analyzed roadway volumes under two conditions, including the "Roadway Peak Hour Condition" and "Generator Peak Hour Condition". Since a user has been identified for MSV1, actual trip rates based upon staggered employee shift times and operations at other, similar facilities were able to be used for the TIS. This provides more accurate data for purposes of the MSV1 TIS and the Planning Board's review.

Since the user's required timing of shift changes and corresponding loading/unloading operations do not correspond to the peak hours for traffic on surrounding roadways, MSV1's traffic impact during the Roadway Peak Hour Condition is reduced. For the Roadway Peak Hour Condition, the weekday morning peak hour of the adjacent roadway system occurs from 7:30 AM to 8:30 AM and the weekday evening peak of the adjacent roadway system occurs from 3:30 PM to 4:30 PM. MSV1 will have two general shifts for employees with peak traffic occurring from 6:30 AM to 7:30 AM and from 5:30 PM to 6:30 PM, representing the Generator Peak Hour Condition.

The TIS conducted a capacity analysis at the following intersections:

- 5S and NYS Route 30 Southbound Ramps / P.S. Street;
- 5S and NYS Route 30 Northbound Ramps;

- NYS Route 30 and Route 5S Ramps;
- NYS Route 30 and I-90 Exit 27 Ramps;
- Route 5S and Target Driveway East / Proposed Central Driveway;
- Route 5S and Proposed West Driveway; and
- Route 5S and Proposed East Driveway.

MSV1 is expected to be operational in 2027, so the TIS analyzes the capacity of local roadways and intersections to handle the addition of MSV1 traffic in 2027 during the Roadway Peak Hour Condition and Generator Peak Hour Condition based on projected future traffic levels. For this analysis, the TIS used current traffic counts and estimated a 1.8% per year increase in future traffic to develop projected "2027 No-Build" traffic volumes that do not include MSV1's anticipated traffic.

MSV1's site-generated trips were then added to the 2027 No-Build traffic volumes to provide the 2027 Build traffic volumes. Based on a review of the analysis, with the addition of the improvements recommended in the TIS, the TIS concludes that the adjacent roadway network and proposed driveway system have the capacity to accommodate the anticipated traffic from MSV1 without resulting in any significant adverse impact on Transportation. Specifically, with the anticipated addition of MSV1 traffic in 2027, all of the studied intersections (except for the proposed intersection between MSV1's central driveway and Target's eastern driveway on Route 5S) will continue to provide acceptable levels of service without any additional mitigation measures.

Proposed mitigation measures to minimize traffic impacts from MSV1 are only recommended for the proposed intersection of the Project's central driveway and Target's eastern driveway on Route 5S. To improve traffic conditions at this new intersection, a traffic signal will be provided. In addition, the TIS recommends the widening of Route 5S at this intersection to provide a dedicated, 400-foot westbound left turn lane into the Project's central driveway. The TIS has been submitted to NYSDOT for its review and these improvements will be undertaken subject to NYSDOT review and approval. `

For the foregoing reasons, MSV1 will not result in any significant adverse impacts on Transportation.

14. Impact on Energy

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Energy.

MSV1's potential for impacts on Energy are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Energy.

The Project will require the use of electricity subject to the specific needs of the user. Increased electricity usage will be required for lighting, HVAC systems, office/warehouse equipment, etc. See FEAF Part 1, Appendix 5. This energy usage will be similar in amount to the energy used for comparable commercial buildings in the Town, County, and across the State. The Substation will be built on the Project Site to serve the Project and National Grid has indicated that it can serve the Project. Overall, the Project will not result in a significant increase in the use of energy.

Accordingly, no significant adverse impact on Energy will occur from MSV1.

15. Impact on Noise, Odor and Light

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Noise, Odor and Light.

MSV1's potential for impacts on Noise, Odor and Light are consistent with those reviewed by the Planning Board for the 2019 Project and will not have a significant adverse impact on Noise, Odor and Light.

As with the 2019 Project, no significant adverse noise, odor or light impacts are expected from MSV1. During construction, any noise and odor impacts from construction equipment will be temporary, of short duration and non-significant. MSV1, when operational, is not anticipated to generate any odor impacts and any noise and lighting impacts will be substantially mitigated so that no significant adverse impacts will occur.

During construction, like the 2019 Project, blasting would occur during the initial phases of MSV1's construction in order to establish necessary elevation grades for the building and other improvements. This blasting will be very limited in duration during the first several months of construction. All blasting during construction would be performed pursuant to a program developed by a qualified geotechnical engineer to minimize impacts, including noise.

Proposed measures to reduce potential noise from blasting include only conducting blasting activities during weekday working hours and not blasting when weather conditions, including wind direction, are unfavorable for avoiding noise impacts. As noted above, no sensitive receptors, including residences are located within 500 feet of where blasting will occur on the Project Site. Notwithstanding, prior notice of planned blasting activities will be provided to all landowners within 500 feet of the overall Project Site's boundaries.

To evaluate potential onsite noise impacts based upon MSV1's proposed operations, BMG conducted a sound study (the "Sound Study") that demonstrates that the Project will comply with NYSDEC's noise guidelines and have no adverse impact on nearby residential uses. See Appendix 18. The Project Site is uniquely situated adjacent to I-90 and the Project's layout is purposefully oriented to be as far away as possible from residential uses to the north and east of the Project Site. This distance is a critical factor for reducing potential noise impacts from the Project. Further, MSV1's loading docks will face away from nearby residences, so the intervening building will block noise associated with truck activities at those loading docks. Also, the Sound Study found that existing ambient sound levels are heavily affected by the constant noise of passing traffic on Route 5S and I-90.

The Study also evaluated the potential for off-site noise impacts from MSV1 due to increased traffic based upon the TIS. See Appendix 17. This offsite sound study demonstrates that the projected noise impacts from increased traffic will not have any significant adverse impact on the residential or other sensitive receptors along the Routes 5S commercial/industrial corridor between the Project Site and I-90. Specifically, based upon NYSDEC's noise guidance, the supplemental study found that all receptors would not experience any significant adverse impact from sound levels as compared to existing ambient conditions.

Similarly, MSV1's lighting will not result in any significant adverse impacts. New, dark-sky compliant, modern and energy-efficient lighting will be used throughout the Project Site. See Appendix 4, Site Plans. Exterior site lighting will comply with the Zoning Ordinance and will be the minimum necessary while ensuring a safe and secure facility. All proposed lighting will be downward facing and will minimize sky glow and light pollution from the Project Site. Where appropriate, lighting fixtures will be of a full cutoff type or provided with shields to reduce glare and light pollution. As shown on the Photometric Plan (See Appendix 4), the fixture locations have been sited to avoid any light trespass onto adjacent properties. These measures have been incorporated to minimize otherwise potential adverse impacts from site lighting of the new building and parking facilities. Though MSV1 involves a taller building, mitigation measures including interior blinds will be employed to ensure that any higher windows do not contribute to new lighting impacts. Also, since the building involves a substantially smaller footprint than the 2019 Project, it is likely that fewer windows overall will be provided.

Based on the foregoing, the Project will not cause any significant adverse impacts involving Noise, Odor or Light.

16. Impact on Human Health

Proposed Finding: The Project will not result in any significant adverse environmental impacts on Human Health.

MSV1's potential for impacts on Human Health are consistent with those reviewed by the Planning Board for the 2019 Project and will not result in any significant adverse impact.

As discussed in Impact on Air, the Project will not involve any stationary air emission sources requiring NYSDEC permits and cumulative mobile source air emissions will comply with the NAAQS and not contribute significantly to Ozone pollution. Nor will the Project involve the generation, treatment or storage of hazardous wastes. Further, the Project will not involve the bulk storage of over 1,100 gallons of petroleum or chemical products and no pesticides or herbicides are proposed to be used for the Project.

Additionally, there are no environmental conditions existing on the Project Site indicating the presence of contamination requiring any remediation. Public water will be provided for the Project and wastewater will be pumped to an existing public wastewater treatment plant and treated prior to discharge subject to a NYSDEC SPDES permit. No septic system will be used. Further, the Project's SWPPP provides for "hotspot" treatment to prevent any ground or surface water contamination from Project-generated stormwater.

Finally, all construction and operational activities will be undertaken in accordance with and in compliance with all pertinent environmental and land development regulations and related permit and approval procedures and requirements.

Accordingly, no significant adverse impacts on Human Health will occur from MSV1.

17. Consistency with Community Plans

Proposed Finding: The Project is consistent with Community Plans.

The Project has been designed in accordance with the Town of Florida's Zoning Ordinance and to comply with its standards for a special permit and site plan approval.

For the reasons noted in the chart below, the Project is consistent with the Town's Zoning Ordinance and its 1996 Comprehensive Plan. The 2011 Amendment to the Town's Comprehensive Plan provides further support for consistency of MSV1 with Community Plans.

Community Plan Consistency	**Source**
The Project Site is located in the C-2 zoning district, where warehouse/distribution centers are allowed uses.	Town of Florida Zoning Map
"To promote health and general welfare." The Project would promote the general welfare by supporting development of a new business in the Town of Florida with accompanying jobs and direct and indirect economic benefits to the community.	Town of Florida Zoning Ordinance Section 2(3)
"To encourage the most appropriate use of land throughout the Town." The Project is consistent with the uses already allowed for lands in the C-2 zoning district, where the Site is located.	Town of Florida Zoning Ordinance Section 2(9)
"Improve employment opportunities for residents of the area." The Project would provide substantial employment opportunities to residents of the Town.	Town of Florida Comprehensive Plan (1996), Goal #2, Objective #1, Page 48
"Limit industrial…development to an area of the town where it will have the least impact…as close as possible to existing built up areas." The Project will be located on lands in the C-2 district between Route 5S and I-90 and across Route 5S from the IBP district. There is existing commercial and industrial development in the C-2 district to the east and west of the Project Site and two warehouse/distribution centers in the IBP district to the north of the Site across Route 5S, with I-90 bounding the Project Site to the south.	Town of Florida Comprehensive Plan (1996), Goal #3, Objective #3, Page 50
"Institute land use policies, where practical, that also promote regional economic development and environmental goals." The Project would support the Town's objective of economic development.	Town of Florida Comprehensive Plan (1996), Goal #4, Objective #1, Page 51
The Town of Florida Comprehensive Plan (1996) contemplated the development of warehouses and distribution centers along Route 5S west of Amsterdam, including the lands comprising the Project Site. The Project is consistent with the Comprehensive	Town of Florida Comprehensive Plan (1996), Preferred Land Use Development Map; Town of Florida Zoning Map (2016)

Community Plan Consistency	Source
Plan's goal of allowing these types of uses in this portion of the Town, including on the Project Site.	
In its Comprehensive Plan, the Town selected a preferred future land use/zoning pattern which includes "new industrial business zones to accommodate potential new businesses and jobs." The Project is consistent with this preference for new industrial development in the Town, including on the Project Site.	Town of Florida Comprehensive Plan (1996), Page 60 and Preferred Land Use Development Map
In its 2011 Comprehensive Plan Amendment, the Town envisioned that development such as the Project would "continue in the concentrated area around the IBP zoning district, away from the more rural and residential portions of the Town." The Project Site is immediately adjacent to the Town's IBP district across Route 5S, fulfilling this community planning goal.	Town of Florida Comprehensive Plan Amendment (2011), Page 5

Overall, MSV1 is consistent with the adopted vision for industrial development in the Town in the C-2 district that will reduce the property tax burden on local residents with a Project that will produce many jobs, provide substantial private and public revenues and have minimal local impacts. MSV1 will significantly contribute to the achievement of the community's goals through:

- Substantial building permit fees for the Project will be paid to the Town for the Project;
- Creation of a minimum of 300 construction jobs through the construction of the Project;
- Creation of a minimum of 750 permanent jobs with full comprehensive benefits and educational opportunities, plus hundreds of part-time and seasonal jobs;
- Productive use of a vacant site in the C-2 zoning long-targeted for industrial development;
- Significant increase in the taxable value of the Project Site, with a total capital investment in excess of several hundred million dollars;
- Indirect employment resulting from the build-out of Project;
- Local procurement opportunities for small businesses;
- Ancillary economic output due to employment and construction; and
- Positive impact creating substantial new opportunities with fiscal benefits supporting local public schools and community infrastructure.

For the foregoing reasons, MSV1 will support and substantially further the goals and objectives of local community plans and will not have a significant adverse impact on them.

18. Consistency with Community Character

Proposed Finding: The Project is consistent with Community Character.

MSV1 conforms to the existing and planned character of the area where the Project Site is located between I-90 and Route 5S in the Town's C-2 zoning district and directly across Route 5S from the IBP district . The Project Site is situated with immediate access to Route 5S. Further, in the C-2 district where the Site is located, new residential uses are not allowed, so no further development of homes may occur there. As discussed above, impacts on existing residential properties will be minimized by the Project's design.

The Project Site is located in an area zoned for such uses that includes a growing number of warehouses and other commercial buildings located along the Route 5S commercial/industrial corridor. In this context, MSV1 is entirely consistent with, and will improve, the immediately surrounding C-2 zoning district's primarily nonresidential community character.

As discussed above, while the Project's building is taller than the building approved by the Planning Board for the 2019 Project, the potential visual impacts of the Project on nearby residential uses will be lessened by intervening vegetation, along with an attractive architectural design for the Project. Further, due to the location of the Project Site in the C-2 commercial/industrial zoning district, some visibility of the Project from surrounding uses is to be reasonably expected.

Similarly, as discussed in relation to potential Project impacts on Noise, the Project will result in minimal increases in the noise experienced by nearby residential receptors neighbors above existing, ambient levels. Finally, as discussed above regarding impacts on Light, the Project's proposed lighting will be dark-sky compliant, minimize sky glow and light pollution and, as shown on the Site Plans, will substantially avoid any light trespass onto adjacent properties.

As designed, MSV1 will be consistent with the character of this area of the C-2 zoning district along I-90 and the Town's existing and planned Route 5S commercial/industrial corridor. The Project Site will be repurposed with a use appropriate to its location in that district, substantially benefitting the Town.

Accordingly, the Project will be consistent with the Town's expectations for the community character of the C-2 district.

19. Impact on Disadvantaged Communities

Proposed Finding: The Project will not result in any significant adverse environmental impacts on a Disadvantaged Community.

MSV1 is located outside of but within ½ mile of a designated Disadvantaged Community and Project traffic will travel through the DAC on Routes 5S/30 to I-90. Accordingly, the Planning Board has evaluated the potential for Project impacts on the DAC based upon the questions presented in NYSDEC's proposed addition to the FEAF Part 2 for DACs as part of proposed changes to the SEQRA regulations in 6 NYCRR Part 617. MSV1 will not have any significant adverse impact on the DAC involving the Project for the following reasons:

Question 19(a) – Is the potentially affected disadvantaged community identified as having comparatively higher burdens or vulnerabilities by the Disadvantaged Community Assessment Tool (https://on.ny.gov/DACAT)?

Yes. The DAC potentially affected by the Project is identified as having comparatively higher burdens of vulnerabilities by the Disadvantaged Community Assessment Tool.

Question 19(b) – The proposed action may create new air emissions or increase existing air emissions within a disadvantaged community.

Yes. MSV1 will create new air emissions or increase existing air emissions that may affect a disadvantaged community, however, air emissions associated with MSV1 will not result in any significant adverse impact on the DAC for the reasons discussed in relation to Impacts on Air (Section 6) above. Based upon this conservative analysis that considered the potential for cumulative impacts beyond those of MSV1 alone, MSV1 will not result in any significant adverse impacts to air quality in the nearby DAC through which Project traffic will travel along Route 5S to I-90.

Question 19(c) – The proposed action may create new wastewater treatment or discharges, or expand existing wastewater treatment or discharges, within a disadvantaged community.

Yes. MSV1 will expand existing wastewater treatment or discharges, within a disadvantaged community. As noted above, wastewater from the Project will be pumped from the Project Site through an underground force main through the Town's sanitary infrastructure, ultimately to the City of Amsterdam wastewater treatment plant, where it will be treated prior to discharge in accordance with a NYSDEC SPDES permit. The Amsterdam plant is located in an adjoining DAC census tract and wastewater discharges are not identified as a significant pollution burden in that DAC. The discharge from Project will not require any pretreatment because it will consist only of sanitary wastewater from a limited number of restrooms. Accordingly, MSV1 will have a minimal impact on the DAC as a result of its expansion of the wastewater discharge at the Amsterdam wastewater treatment plant.

Question 19(d) – The proposed action creates or expands a solid or hazardous waste management facility, or involves the generation of solid or hazardous waste, within or near a disadvantaged community.

No. As reflected in the FEAF Part 1 provided in support of the Application, MSV1 will not result in the generation of any hazardous waste and will not be a solid waste management facility. Per the FEAF 1, MSV1 will generate an estimated 1-2 tons per month of solid waste during operations that will be hauled offsite and disposed of by a private carting business at a license and permitted solid waste management facility subject to NYSDEC permit requirements. No waste will be disposed of on the Project Site**.**

Question 19(e) – The proposed action may increase traffic within a disadvantaged community.

Yes. MSV1 will increase traffic within a disadvantaged community but will not result in any significant adverse impact to the DAC for the reasons discussed above in regard to Impact on Transportation (Section 13).

Question 19(f) – The proposed action affects or involves one or more of the following facility types: landfill; other industrial, manufacturing, or mining land uses; major oil or chemical bulk storage facility; municipal waste combustor; power generation facility; risk management plan site; remediation site; or scrap metal processor.

Yes. MSV1 result in the development of a warehouse/distribution facility on lands between Route 5S and I-90 in the C-2 zoning district, where commercial and industrial uses such as the Project are allowed by the Town's Zoning Ordinance and are consistent with the Town's Comprehensive Plan. Based on the proposed findings that MSV1 is consistent with Community Plans (Section 17) and Community Character (Section 18), MSV1 will not have a significant adverse impact on the nearby DAC through which Project traffic will travel along Route 5S to I-90.

Question 19(g) – Other "pollution" impacts

For the following reasons and based upon the SEQRA Expanded EAF Narrative and its appendices, MSV1 will not have any significant adverse impacts on the DAC from the following other forms of pollution as follows:

Noise

Consistent with the Planning Board's findings set forth in Impacts to Noise, Odor and Light provided in Section 15 above, MSV1 will not result in any significant adverse impacts on Noise in the DAC either from Project operations or as a result of offsite traffic along Routes 5S/30 to I-90. In particular, based upon the study provided by BMG's qualified noise expert in support of the Application, MSV1 will comply with NYSDEC's noise guidance and will not result in any significant adverse noise impacts on the residential properties in the DAC.

Further, projected noise impacts from increased traffic will comply with the NYSDEC noise guidance for the residential or other sensitive receptors in the DAC along the Route 5S commercial/industrial corridor between the Project Site and I-90. Based upon NYSDEC's noise guidance, the sound impact information by BMG's qualified expert consultant concluded that no receptors within that area would experience any significant adverse impact from sound levels as compared to existing ambient conditions.

For the foregoing reasons, the potential impacts of MSV1 on Noise will not result in any significant adverse impact on the DAC.

Odors

With respect to Odors, MSV1 is not anticipated to result in more than minimal impacts to the DAC associated with construction and operation. During construction, any odor impacts from construction equipment will be temporary, of short duration and non-significant. MSV1, when operational, is not anticipated to generate any odor impacts and any odor impacts from mobile sources on the DAC will be no different than existing traffic along the Route 5S commercial/industrial corridor.

Light

MSV1's lighting will be substantially consistent with the lighting analyzed by the Planning Board for the 2019 Project and will not have more than a minimal impact on the DAC.

New, dark-sky compliant, modern and energy-efficient lighting will be used for the Project, consistent with what would reasonably be expected for an industrial use in the C-2 zoning district. Exterior site lighting will comply with the Zoning Ordinance and will be the minimum necessary while ensuring a safe and secure facility. All proposed lighting will be downward facing and will minimize sky glow and light pollution from the Project. Where appropriate, lighting fixtures will be of a full cutoff type or provided with shields to reduce glare and light pollution. As shown on MSV1's Site Plans, the fixture locations have been sited to avoid any light trespass onto adjacent properties. These measures have been incorporated to minimize otherwise potential adverse impacts from site lighting of the new building and parking facilities. Though MSV1 involves a taller building, mitigation measures including interior blinds will be employed to ensure that any higher windows do not contribute to new lighting impacts. Accordingly, no significant adverse impact on the DAC from MSV1's lighting is expected to occur.

VI. CONCLUSION

Based on the foregoing discussion, MSV1 is generally consistent with the impacts reviewed by the Planning Board for the 2019 Project for which a SEQRA Negative Declaration was issued and will not create any significant new or additional adverse environmental impacts. Consistent with the SEQRA Negative Declaration issued for the 2019 Project and based on the review of the Application by the Planning Board and its consultants and the Planning Board's review of the FEAF Part 2 for MSV1, BMG respectfully submits that MSV1 will not result in any significant adverse impacts and that a Negative Declaration for the Project is warranted under SEQRA.

APPENDICES

Appendix 1 – 2019 Project Approvals

Appendix 2 – Wetland approvals

Appendix 3 – 2019 Project Overall Site Plan

Appendix 4 – MSV1 Proposed Site Plans

TOWN OF FLORIDA

Eric M. Mead, Supervisor
Emily Staley, Town Clerk
Steven Anderson, Hwy. Superintendent

214 Ft. Hunter Rd.
Amsterdam, NY 12010

Office: **518-843-6372**
Fax: **518-843-3324**

Part II of the SEQRA was read by Douglas Cole of Prime Engineering and all questions were answered. Since there was no moderate to large impact found a motion was made by Rudy Horlbeck and seconded by Mike Taylor to find that the proposed action will not result in any significant adverse environmental impacts and therefore constitutes a negative declaration for the SEQRA. All other members present were in favor.

Roll Call:
Mike Taylor – Yes
Richard Romeo – Yes
Don Perretta – Yes
Rudy Horlbeck – Yes
Rich Romeo – Yes
Christopher Holloway – Yes
Matt Gogis - Yes

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Route 5S Warehouse/Storage Facility		
Project Location (describe, and attach a general location map): Approximately 1.5 miles west of Interchange 27 on the south side of Route 5S		
Brief Description of Proposed Action (include purpose or need): The Applicant is proposing to construct a 1,000,000 SF warehouse. The project would include approximately 700 tractor trailer spaces and 150 loading docks. A separate driveway from Route 5S would provide access to an approximately 250 automobile parking lot for employees and visitors. The project would include a new stormwater management system, lighting, and landscaping. Project would connect to municipal water and sewer located along Route 5S.		
Name of Applicant/Sponsor: WE Acquisitions	Telephone: E-Mail:	
Address: 300 George Street		
City/PO: New Haven	State: CT	Zip Code: 06511
Project Contact (if not same as sponsor; give name and title/role): Steven Wilson, Project Manager, Bohler Engineering	Telephone: 519-438-9900 E-Mail: steven.wilson@bohlereng.com	
Address: 17 Computer Drive West		
City/PO: Albany	State: NY	Zip Code: 12205
Property Owner (if not same as sponsor): see attached list	Telephone: E-Mail:	
Address:		
City/PO:	State:	Zip Code:

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)		
Government Entity	**If Yes: Identify Agency and Approval(s) Required**	**Application Date (Actual or projected)**
a. City Counsel, Town Board, or Village Board of Trustees ☐Yes☑No		
b. City, Town or Village Planning Board or Commission ☑Yes☐No	Planning Board - Site Plan Review; Special Use Permit; Subdivision/Lot Consolidation	4/24/19
c. City, Town or Village Zoning Board of Appeals ☐Yes☑No		
d. Other local agencies ☐Yes☑No		
e. County agencies ☑Yes☐No	Montgomery County Planning Board - 239M Review	
f. Regional agencies ☐Yes☑No		
g. State agencies ☑Yes☐No	NYSDOT - Highway Work Permit NYSDEC - SPDES NOI & Section 401 WQC, OPR	
h. Federal agencies ☑Yes☐No	Corps of Engineers - Section 404 Wetland Permit	

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes☐No

If Yes, identify the plan(s):

NYS Heritage Areas:Mohawk Valley Heritage Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☑Yes☐No

If Yes, identify the plan(s):

A portion of the site is listed in the Draft 2017 Agricultural and Farmland Protection Plan for Montgomery County; plan is still in draft.

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
C-2 Commercial

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Greater Amsterdam

b. What police or other public protection forces serve the project site?
Montgomery County Sheriff, New York State Police

c. Which fire protection and emergency medical services serve the project site?
Florida Volunteer Fire Department

d. What parks serve the project site?
N/A

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Warehouse/Storage

b. a. Total acreage of the site of the proposed action? 140 acres
b. Total acreage to be physically disturbed? 100+/- acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 140+/- acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☑ Yes ☐ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
Consolidation of 12 lots and subdivision of two lots
ii. Is a cluster/conservation layout proposed? ☐ Yes ☑ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 18-24 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____ year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☐Yes ☑No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				
At completion of all phases				

g. Does the proposed action include new non-residential construction (including expansions)? ☑Yes ☐No

If Yes,

i. Total number of structures 2

ii. Dimensions (in feet) of largest proposed structure: 30-35' height; 2000' width; and 500' length

iii. Approximate extent of building space to be heated or cooled: 1,000,000 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑Yes ☐No

If Yes,

i. Purpose of the impoundment: Stormwater management

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑Other specify: Stormwater Runoff

iii. If other than water, identify the type of impounded/contained liquids and their source. N/A

iv. Approximate size of the proposed impoundment. Volume: 7 million gallons; surface area: 12+/- acres

v. Dimensions of the proposed dam or impounding structure: N/A height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete): Earth fill

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐Yes ☑No

If Yes:

i. What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐Yes ☐No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____ acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☑Yes ☐No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☑Yes ☐No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): Project will impact federally regulated wetlands.

_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:
6.5 acres of wetland impacts are expected by this project.

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐Yes ☑No
If Yes, describe: _____

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐Yes ☑No
If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____
- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____
Project will replace wetlands >>>>>

c. Will the proposed action use, or create a new demand for water? ☑Yes ☐No
If Yes:

i. Total anticipated water usage/demand per day: 6,850 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑Yes ☐No
If Yes:

- Name of district or service area: Town of Florida Water District; City of Amsterdam water supply
- Does the existing public water supply have capacity to serve the proposal? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☑Yes ☐No
- Do existing lines serve the project site? ☑Yes ☐No

iii. Will line extension within an existing district be necessary to supply the project? ☐Yes ☑No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____
- Source(s) of supply for the district: _____

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑No
If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑Yes ☐No
If Yes:

i. Total anticipated liquid waste generation per day: 6,850 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____
Sanitary wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑Yes ☐No
If Yes:

- Name of wastewater treatment plant to be used: City of Amsterdam
- Name of district: Town of Florida Sewer District
- Does the existing wastewater treatment plant have capacity to serve the project? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No

- Do existing sewer lines serve the project site? ☑Yes ☐No
- Will a line extension within an existing district be necessary to serve the project? ☐Yes ☑No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐Yes ☑No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑Yes ☐No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

2.4M Square feet or 55 +/- acres (impervious surface)

6M Square feet or 138+/- acres (parcel size)

ii. Describe types of new point sources. Stormwater discharge from treatment system

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

New stormwater management areas

- If to surface waters, identify receiving water bodies or wetlands: Unnamed tributary of Chuctanunda Creek
- Will stormwater runoff flow to adjacent properties? ☐Yes ☑No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑Yes ☐No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑Yes ☐No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Delivery vehiilces and tractor trailers

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

N/A

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

N/A

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐Yes ☑No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐Yes ☐No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐Morning ☐Evening ☐Weekend
☑ Randomly between hours of 7am to 7pm.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): TBD

iii. Parking spaces: Existing 10-15+/- Proposed 1,050 Net increase/decrease 1,035

iv. Does the proposed action include any shared use parking? ☐Yes ☑No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:
TBD

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☑No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☑Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action:
7,600,000 KWH

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):
National Grid

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7 am to 6 pm
- Saturday: 7 am to 5 pm
- Sunday: closed
- Holidays: closed

ii. During Operations:

- Monday - Friday: 24 hours per day
- Saturday: 24 hours per day
- Sunday: 24 hours per day
- Holidays: Closed

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Blasting will be require for shale removal; blasting will be during the initial phase of construction and will be approximately 90 days in duration

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Parking lot lighting will be needed for safety; closest structure is approximately 600' away. All light fixtures will be dark sky friendly.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: 10+ tons per 18-24 month (unit of time)
- Operation : 1-2 tons per monthly (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Recyclable materails (e.g., wood, metal, etc.) would be seperated from solid waste
- Operation: Recyclable materails (e.g., paper, cardboard, plastic bottles, etc.) would be seperated from solid waste

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: Commercial waste hauler will transfer solid waste and recycables to appropriate facility
- Operation: Commercial waste hauler will transfer solid waste and recycables to appropriate facility

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☑ Industrial ☐ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☑ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	< 1	55 +/-	+ 54 +/-
• Forested	6 +/-	1 +/-	- 5 +/-
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	TBD	TBD	TBD
• Agricultural (includes active orchards, field, greenhouse etc.)	75	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	TBD	TBD	TBD
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Lawn/landscape areas	5 +/-	10+/-	+ 5

c. Is the project site presently used by members of the community for public recreation? ☐Yes ☑No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐Yes ☑No

If Yes,

i. Identify Facilities:

_____

_____

e. Does the project site contain an existing dam? ☐Yes ☑No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐Yes ☑No

If Yes:

i. Has the facility been formally closed? ☐Yes ☐No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐Yes ☑No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐Yes ☑ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐Yes ☐No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____

☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures: _____

_____

_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐Yes ☑No

If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

_____

_____

v. Is the project site subject to an institutional control limiting property uses? ☐Yes ☑No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐Yes ☐No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 8'+/- feet

b. Are there bedrock outcroppings on the project site? ☑Yes ☐No
If Yes, what proportion of the site is comprised of bedrock outcroppings? 5 %

c. Predominant soil type(s) present on project site:

Appleton Silt Loam	40 %
Palatine Silt Loam	20 %
Lansing Silt Loam	10 %

d. What is the average depth to the water table on the project site? Average: 0-10' feet

e. Drainage status of project site soils:
☑ Well Drained: 20 % of site
☑ Moderately Well Drained: 60 % of site
☑ Poorly Drained 20 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 50 % of site
☑ 10-15%: 40 % of site
☑ 15% or greater: 10 % of site

g. Are there any unique geologic features on the project site? ☐Yes ☑No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☑Yes ☐No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑Yes ☐No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑Yes ☐No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name 876-162 Classification C
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Waters, Federal Waters, Federal Waters,... Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐Yes ☑No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐Yes ☑No

j. Is the project site in the 100-year Floodplain? ☐Yes ☑No

k. Is the project site in the 500-year Floodplain? ☐Yes ☑No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐Yes ☑No
If Yes:

i. Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site:
White tail deer, squirrel
raccoon, skunk
variety of birds

n. Does the project site contain a designated significant natural community? ☐Yes ☑No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation):
ii. Source(s) of description or evaluation:
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑No
If Yes:
i. Species and listing (endangered or threatened):

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐Yes ☑No
If Yes:
i. Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐Yes ☑No
If yes, give a brief description of how the proposed action may affect that use:

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☑Yes ☐No
If Yes, provide county plus district name/number: MONT003

b. Are agricultural lands consisting of highly productive soils present? ☑Yes ☐No
i. If Yes: acreage(s) on project site? 60+/-
ii. Source(s) of soil rating(s): NRCS

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐Yes ☑No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐Yes ☑No
If Yes:
i. CEA name:
ii. Basis for designation:
iii. Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☑ Yes ☐ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☑ Historic Building or District

ii. Name: J Houck Historic Site

iii. Brief description of attributes on which listing is based:

19th century homestead

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☑ Yes ☐ No

If Yes:

i. Describe possible resource(s): J Houck Historic Site

ii. Basis for identification: Phase 1 and 2 Cultural Resource Investigation

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Riverlink Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): City Park

iii. Distance between project and resource: 2+/- miles.

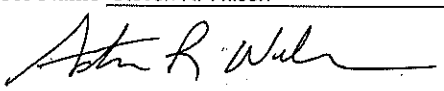
i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation:

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information



Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

EAF Mapper Summary Report

Tuesday, March 12, 2019 12:48 PM

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:Mohawk Valley Heritage Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	Yes
E.2.h.ii [Surface Water Features]	Yes
E.2.h.iii [Surface Water Features]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
E.2.h.iv [Surface Water Features - Stream Name]	876-162
E.2.h.iv [Surface Water Features - Stream Classification]	C
E.2.h.iv [Surface Water Features - Wetlands Name]	Federal Waters
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No

E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No
E.2.o. [Endangered or Threatened Species]	No
E.2.p. [Rare Plants or Animals]	No
E.3.a. [Agricultural District]	Yes
E.3.a. [Agricultural District]	MONT003
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Agency Use Only [If applicable]
Project : Interchange 27 Warehouse
Date : 8/21/19

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer "**Yes**" to a numbered question, please complete all the questions that follow in that section.
- If you answer "**No**" to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box "Moderate to large impact may occur."
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the "whole action".
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

1. Impact on Land
Proposed action may involve construction on, or physical alteration of, the land surface of the proposed site. (See Part 1. D.1)
If "Yes", answer questions a - j. If "No", move on to Section 2.

☐ NO ☑ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may involve construction on land where depth to water table is less than 3 feet.	E2d	☑	☐
b. The proposed action may involve construction on slopes of 15% or greater.	E2f	☐	☐
c. The proposed action may involve construction on land where bedrock is exposed, or generally within 5 feet of existing ground surface.	E2a	☐	☐
d. The proposed action may involve the excavation and removal of more than 1,000 tons of natural material.	D2a	☐	☐
e. The proposed action may involve construction that continues for more than one year or in multiple phases.	D1e	☑	☐
f. The proposed action may result in increased erosion, whether from physical disturbance or vegetation removal (including from treatment by herbicides).	D2e, D2q	☑	☐
g. The proposed action is, or may be, located within a Coastal Erosion hazard area.	B1i	☐	☐
h. Other impacts: _____		☐	☐

2. Impact on Geological Features

The proposed action may result in the modification or destruction of, or inhibit access to, any unique or unusual land forms on the site (e.g., cliffs, dunes, minerals, fossils, caves). (See Part 1. E.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - c. If "No", move on to Section 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Identify the specific land form(s) attached: _____	E2g	☐	☐
b. The proposed action may affect or is adjacent to a geological feature listed as a registered National Natural Landmark. Specific feature: _____	E3c	☐	☐
c. Other impacts: _____		☐	☐

3. Impacts on Surface Water

The proposed action may affect one or more wetlands or other surface water bodies (e.g., streams, rivers, ponds or lakes). (See Part 1. D.2, E.2.h) ☐ NO ☑ YES

If "Yes", answer questions a - l. If "No", move on to Section 4.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may create a new water body.	D2b, D1h	☑	☐
b. The proposed action may result in an increase or decrease of over 10% or more than a 10 acre increase or decrease in the surface area of any body of water.	D2b	☑	☐
c. The proposed action may involve dredging more than 100 cubic yards of material from a wetland or water body.	D2a	☐	☐
d. The proposed action may involve construction within or adjoining a freshwater or tidal wetland, or in the bed or banks of any other water body.	E2h	☐	☐
e. The proposed action may create turbidity in a waterbody, either from upland erosion, runoff or by disturbing bottom sediments.	D2a, D2h	☑	☐
f. The proposed action may include construction of one or more intake(s) for withdrawal of water from surface water.	D2c	☐	☐
g. The proposed action may include construction of one or more outfall(s) for discharge of wastewater to surface water(s).	D2d	☐	☐
h. The proposed action may cause soil erosion, or otherwise create a source of stormwater discharge that may lead to siltation or other degradation of receiving water bodies.	D2e	☑	☐
i. The proposed action may affect the water quality of any water bodies within or downstream of the site of the proposed action.	E2h	☑	☐
j. The proposed action may involve the application of pesticides or herbicides in or around any water body.	D2q, E2h	☑	☐
k. The proposed action may require the construction of new, or expansion of existing, wastewater treatment facilities.	D1a, D2d	☐	☐

l. Other impacts: _____ _____		☐	☐

4. Impact on groundwater

The proposed action may result in new or additional use of ground water, or may have the potential to introduce contaminants to ground water or an aquifer. (See Part 1. D.2.a, D.2.c, D.2.d, D.2.p, D.2.q, D.2.t) ☑ NO ☐ YES

If "Yes", answer questions a - h. If "No", move on to Section 5.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may require new water supply wells, or create additional demand on supplies from existing water supply wells.	D2c	☐	☐
b. Water supply demand from the proposed action may exceed safe and sustainable withdrawal capacity rate of the local supply or aquifer. Cite Source: _____	D2c	☐	☐
c. The proposed action may allow or result in residential uses in areas without water and sewer services.	D1a, D2c	☐	☐
d. The proposed action may include or require wastewater discharged to groundwater.	D2d, E2l	☐	☐
e. The proposed action may result in the construction of water supply wells in locations where groundwater is, or is suspected to be, contaminated.	D2c, E1f, E1g, E1h	☐	☐
f. The proposed action may require the bulk storage of petroleum or chemical products over ground water or an aquifer.	D2p, E2l	☐	☐
g. The proposed action may involve the commercial application of pesticides within 100 feet of potable drinking water or irrigation sources.	E2h, D2q, E2l, D2c	☐	☐
h. Other impacts: _____ _____		☐	☐

5. Impact on Flooding

The proposed action may result in development on lands subject to flooding. (See Part 1. E.2) ☑ NO ☐ YES

If "Yes", answer questions a - g. If "No", move on to Section 6.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in development in a designated floodway.	E2i	☐	☐
b. The proposed action may result in development within a 100 year floodplain.	E2j	☐	☐
c. The proposed action may result in development within a 500 year floodplain.	E2k	☐	☐
d. The proposed action may result in, or require, modification of existing drainage patterns.	D2b, D2e	☐	☐
e. The proposed action may change flood water flows that contribute to flooding.	D2b, E2i, E2j, E2k	☐	☐
f. If there is a dam located on the site of the proposed action, is the dam in need of repair, or upgrade?	E1e	☐	☐

g. Other impacts: _____ _____		☐	☐

6. Impacts on Air

The proposed action may include a state regulated air emission source. (See Part 1. D.2.f., D.2.h, D.2.g) ☑ NO ☐ YES

If "Yes", answer questions a - f. If "No", move on to Section 7.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. If the proposed action requires federal or state air emission permits, the action may also emit one or more greenhouse gases at or above the following levels:			
i. More than 1000 tons/year of carbon dioxide (CO_2)	D2g	☐	☐
ii. More than 3.5 tons/year of nitrous oxide (N_2O)	D2g	☐	☐
iii. More than 1000 tons/year of carbon equivalent of perfluorocarbons (PFCs)	D2g	☐	☐
iv. More than .045 tons/year of sulfur hexafluoride (SF_6)	D2g	☐	☐
v. More than 1000 tons/year of carbon dioxide equivalent of hydrochloroflourocarbons (HFCs) emissions	D2g	☐	☐
vi. 43 tons/year or more of methane	D2h	☐	☐
b. The proposed action may generate 10 tons/year or more of any one designated hazardous air pollutant, or 25 tons/year or more of any combination of such hazardous air pollutants.	D2g	☐	☐
c. The proposed action may require a state air registration, or may produce an emissions rate of total contaminants that may exceed 5 lbs. per hour, or may include a heat source capable of producing more than 10 million BTU's per hour.	D2f, D2g	☐	☐
d. The proposed action may reach 50% of any of the thresholds in "a" through "c", above.	D2g	☐	☐
e. The proposed action may result in the combustion or thermal treatment of more than 1 ton of refuse per hour.	D2s	☐	☐
f. Other impacts: _____ _____		☐	☐

7. Impact on Plants and Animals

The proposed action may result in a loss of flora or fauna. (See Part 1. E.2. m.-q.) ☐ NO ☑ YES

If "Yes", answer questions a - j. If "No", move on to Section 8.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may cause reduction in population or loss of individuals of any threatened or endangered species, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2o	☑	☐
b. The proposed action may result in a reduction or degradation of any habitat used by any rare, threatened or endangered species, as listed by New York State or the federal government.	E2o	☐	☐
c. The proposed action may cause reduction in population, or loss of individuals, of any species of special concern or conservation need, as listed by New York State or the Federal government, that use the site, or are found on, over, or near the site.	E2p	☐	☐
d. The proposed action may result in a reduction or degradation of any habitat used by any species of special concern and conservation need, as listed by New York State or the Federal government.	E2p	☐	☐

e. The proposed action may diminish the capacity of a registered National Natural Landmark to support the biological community it was established to protect.	E3c	☐	☐
f. The proposed action may result in the removal of, or ground disturbance in, any portion of a designated significant natural community. Source: _____	E2n	☐	☐
g. The proposed action may substantially interfere with nesting/breeding, foraging, or over-wintering habitat for the predominant species that occupy or use the project site.	E2m	☐	☐
h. The proposed action requires the conversion of more than 10 acres of forest, grassland or any other regionally or locally important habitat. Habitat type & information source: _____ _____	E1b	☐	☐
i. Proposed action (commercial, industrial or recreational projects, only) involves use of herbicides or pesticides.	D2q	☐	☐
j. Other impacts: _____ _____		☐	☐

8. Impact on Agricultural Resources

The proposed action may impact agricultural resources. (See Part 1. E.3.a. and b.) ☐NO ☑YES

If "Yes", answer questions a - h. If "No", move on to Section 9.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may impact soil classified within soil group 1 through 4 of the NYS Land Classification System.	E2c, E3b	☑	☐
b. The proposed action may sever, cross or otherwise limit access to agricultural land (includes cropland, hayfields, pasture, vineyard, orchard, etc).	E1a, E1b	☐	☐
c. The proposed action may result in the excavation or compaction of the soil profile of active agricultural land.	E3b	☐	☐
d. The proposed action may irreversibly convert agricultural land to non-agricultural uses, either more than 2.5 acres if located in an Agricultural District, or more than 10 acres if not within an Agricultural District.	E1b, E3a	☑	☐
e. The proposed action may disrupt or prevent installation of an agricultural land management system.	El a, E1b	☑	☐
f. The proposed action may result, directly or indirectly, in increased development potential or pressure on farmland.	C2c, C3, D2c, D2d	☑	☐
g. The proposed project is not consistent with the adopted municipal Farmland Protection Plan.	C2c	☑	☐
h. Other impacts: _____		☐	☐

9. Impact on Aesthetic Resources

The land use of the proposed action are obviously different from, or are in sharp contrast to, current land use patterns between the proposed project and a scenic or aesthetic resource. (Part 1. E.1.a, E.1.b, E.3.h.)

☐ NO ☑ YES

If "Yes", answer questions a - g. If "No", go to Section 10.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Proposed action may be visible from any officially designated federal, state, or local scenic or aesthetic resource.	E3h	☑	☐
b. The proposed action may result in the obstruction, elimination or significant screening of one or more officially designated scenic views.	E3h, C2b	☑	☐
c. The proposed action may be visible from publicly accessible vantage points: i. Seasonally (e.g., screened by summer foliage, but visible during other seasons) ii. Year round	E3h	☑ ☐	☐ ☑
d. The situation or activity in which viewers are engaged while viewing the proposed action is: i. Routine travel by residents, including travel to and from work ii. Recreational or tourism based activities	E3h E2q, E1c	☑ ☑	☐ ☐
e. The proposed action may cause a diminishment of the public enjoyment and appreciation of the designated aesthetic resource.	E3h	☐	☐
f. There are similar projects visible within the following distance of the proposed project: 0-1/2 mile ½ -3 mile 3-5 mile 5+ mile	D1a, E1a, D1f, D1g	☑	☐
g. Other impacts: _____		☐	☐

10. Impact on Historic and Archeological Resources

The proposed action may occur in or adjacent to a historic or archaeological resource. (Part 1. E.3.e, f. and g.)

☐ NO ☑ YES

If "Yes", answer questions a - e. If "No", go to Section 11.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may occur wholly or partially within, or substantially contiguous to, any buildings, archaeological site or district which is listed on the National or State Register of Historical Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places.	E3e	☐	☑
b. The proposed action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory.	E3f	☐	☐
c. The proposed action may occur wholly or partially within, or substantially contiguous to, an archaeological site not included on the NY SHPO inventory. Source: _____	E3g	☐	☐

d. Other impacts: _____		☐	☐
e. If any of the above (a-d) are answered "Moderate to large impact may occur", continue with the following questions to help support conclusions in Part 3:			
i. The proposed action may result in the destruction or alteration of all or part of the site or property.	E3e, E3g, E3f	☐	☑
ii. The proposed action may result in the alteration of the property's setting or integrity.	E3e, E3f, E3g, E1a, E1b	☐	☐
iii. The proposed action may result in the introduction of visual elements which are out of character with the site or property, or may alter its setting.	E3e, E3f, E3g, E3h, C2, C3	☐	☐

11. Impact on Open Space and Recreation

The proposed action may result in a loss of recreational opportunities or a reduction of an open space resource as designated in any adopted municipal open space plan.
(See Part 1. C.2.c, E.1.c., E.2.q.)
If "Yes", answer questions a - e. If "No", go to Section 12.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in an impairment of natural functions, or "ecosystem services", provided by an undeveloped area, including but not limited to stormwater storage, nutrient cycling, wildlife habitat.	D2e, E1b E2h, E2m, E2o, E2n, E2p	☐	☐
b. The proposed action may result in the loss of a current or future recreational resource.	C2a, E1c, C2c, E2q	☐	☐
c. The proposed action may eliminate open space or recreational resource in an area with few such resources.	C2a, C2c E1c, E2q	☐	☐
d. The proposed action may result in loss of an area now used informally by the community as an open space resource.	C2c, E1c	☐	☐
e. Other impacts: _____		☐	☐

12. Impact on Critical Environmental Areas

The proposed action may be located within or adjacent to a critical environmental area (CEA). (See Part 1. E.3.d)
If "Yes", answer questions a - c. If "No", go to Section 13.

☑ NO ☐ YES

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may result in a reduction in the quantity of the resource or characteristic which was the basis for designation of the CEA.	E3d	☐	☐
b. The proposed action may result in a reduction in the quality of the resource or characteristic which was the basis for designation of the CEA.	E3d	☐	☐
c. Other impacts: _____		☐	☐

13. Impact on Transportation
The proposed action may result in a change to existing transportation systems. ☐ NO ☑ YES
(See Part 1. D.2.j)
If "Yes", answer questions a - f. If "No", go to Section 14.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. Projected traffic increase may exceed capacity of existing road network.	D2j	☑	☐
b. The proposed action may result in the construction of paved parking area for 500 or more vehicles.	D2j	☐	☑
c. The proposed action will degrade existing transit access.	D2j	☐	☐
d. The proposed action will degrade existing pedestrian or bicycle accommodations.	D2j	☑	☐
e. The proposed action may alter the present pattern of movement of people or goods.	D2j	☐	☑
f. Other impacts: _____		☐	☐

14. Impact on Energy
The proposed action may cause an increase in the use of any form of energy. ☐ NO ☑ YES
(See Part 1. D.2.k)
If "Yes", answer questions a - e. If "No", go to Section 15.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action will require a new, or an upgrade to an existing, substation.	D2k	☐	☐
b. The proposed action will require the creation or extension of an energy transmission or supply system to serve more than 50 single or two-family residences or to serve a commercial or industrial use.	D1f, D1q, D2k	☑	☐
c. The proposed action may utilize more than 2,500 MWhrs per year of electricity.	D2k	☑	☐
d. The proposed action may involve heating and/or cooling of more than 100,000 square feet of building area when completed.	D1g	☑	☐
e. Other Impacts: _____		☐	☐

15. Impact on Noise, Odor, and Light
The proposed action may result in an increase in noise, odors, or outdoor lighting. ☐ NO ☑ YES
(See Part 1. D.2.m., n., and o.)
If "Yes", answer questions a - f. If "No", go to Section 16.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may produce sound above noise levels established by local regulation.	D2m	☑	☐
b. The proposed action may result in blasting within 1,500 feet of any residence, hospital, school, licensed day care center, or nursing home.	D2m, E1d	☑	☐
c. The proposed action may result in routine odors for more than one hour per day.	D2o	☑	☐

d. The proposed action may result in light shining onto adjoining properties.	D2n	☑	☐
e. The proposed action may result in lighting creating sky-glow brighter than existing area conditions.	D2n, E1a	☑	☐
f. Other impacts: _____ _____		☐	☐

16. Impact on Human Health

The proposed action may have an impact on human health from exposure to new or existing sources of contaminants. (See Part 1.D.2.q., E.1. d. f. g. and h.) ☑ NO ☐ YES

If "Yes", answer questions a - m. If "No", go to Section 17.

	Relevant Part I Question(s)	No,or small impact may cccur	Moderate to large impact may occur
a. The proposed action is located within 1500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community.	E1d	☐	☐
b. The site of the proposed action is currently undergoing remediation.	E1g, E1h	☐	☐
c. There is a completed emergency spill remediation, or a completed environmental site remediation on, or adjacent to, the site of the proposed action.	E1g, E1h	☐	☐
d. The site of the action is subject to an institutional control limiting the use of the property (e.g., easement or deed restriction).	E1g, E1h	☐	☐
e. The proposed action may affect institutional control measures that were put in place to ensure that the site remains protective of the environment and human health.	E1g, E1h	☐	☐
f. The proposed action has adequate control measures in place to ensure that future generation, treatment and/or disposal of hazardous wastes will be protective of the environment and human health.	D2t	☐	☐
g. The proposed action involves construction or modification of a solid waste management facility.	D2q, E1f	☐	☐
h. The proposed action may result in the unearthing of solid or hazardous waste.	D2q, E1f	☐	☐
i. The proposed action may result in an increase in the rate of disposal, or processing, of solid waste.	D2r, D2s	☐	☐
j. The proposed action may result in excavation or other disturbance within 2000 feet of a site used for the disposal of solid or hazardous waste.	E1f, E1g E1h	☐	☐
k. The proposed action may result in the migration of explosive gases from a landfill site to adjacent off site structures.	E1f, E1g	☐	☐
l. The proposed action may result in the release of contaminated leachate from the project site.	D2s, E1f, D2r	☐	☐
m. Other impacts: _____ _____			

17. Consistency with Community Plans

The proposed action is not consistent with adopted land use plans. ☑ NO ☐ YES
(See Part 1. C.1, C.2. and C.3.)
If "Yes", answer questions a - h. If "No", go to Section 18.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action's land use components may be different from, or in sharp contrast to, current surrounding land use pattern(s).	C2, C3, D1a E1a, E1b	☐	☐
b. The proposed action will cause the permanent population of the city, town or village in which the project is located to grow by more than 5%.	C2	☐	☐
c. The proposed action is inconsistent with local land use plans or zoning regulations.	C2, C2, C3	☐	☐
d. The proposed action is inconsistent with any County plans, or other regional land use plans.	C2, C2	☐	☐
e. The proposed action may cause a change in the density of development that is not supported by existing infrastructure or is distant from existing infrastructure.	C3, D1c, D1d, D1f, D1d, E1b	☐	☐
f. The proposed action is located in an area characterized by low density development that will require new or expanded public infrastructure.	C4, D2c, D2d D2j	☐	☐
g. The proposed action may induce secondary development impacts (e.g., residential or commercial development not included in the proposed action)	C2a	☐	☐
h. Other: _____ _____		☐	☐

18. Consistency with Community Character

The proposed project is inconsistent with the existing community character. ☑ NO ☐ YES
(See Part 1. C.2, C.3, D.2, E.3)
If "Yes", answer questions a - g. If "No", proceed to Part 3.

	Relevant Part I Question(s)	No, or small impact may occur	Moderate to large impact may occur
a. The proposed action may replace or eliminate existing facilities, structures, or areas of historic importance to the community.	E3e, E3f, E3g	☐	☐
b. The proposed action may create a demand for additional community services (e.g. schools, police and fire)	C4	☐	☐
c. The proposed action may displace affordable or low-income housing in an area where there is a shortage of such housing.	C2, C3, D1f D1g, E1a	☐	☐
d. The proposed action may interfere with the use or enjoyment of officially recognized or designated public resources.	C2, E3	☐	☐
e. The proposed action is inconsistent with the predominant architectural scale and character.	C2, C3	☐	☐
f. Proposed action is inconsistent with the character of the existing natural landscape.	C2, C3 E1a, E1b E2g, E2h	☐	☐
g. Other impacts: _____ _____		☐	☐

Agency Use Only [IfApplicable]

Project :

Date :

Full Environmental Assessment Form
Part 3 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:
To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

Mitigation of potentially moderate to large impacts:

10. Impact on Historic and Archaeological Resources: The proposed loss of the J. Houck historic site will be mitigated by the completion of a Phase III Retrieval Plan and issuance of a Phase III Report within 18 months of USACE authorization.

13. Impact on Transportation: The large impervious parking area will have runoff treated by the proposed on-site stormwater management facility. The need for a traffic signal at the employee parking entrance on Route 5S did not meet the NYSDOT threshold, but will be further studied after the project is complete.

Determination of Significance - Type 1 and Unlisted Actions

SEQR Status: ☑ Type 1 ☐ Unlisted

Identify portions of EAF completed for this Project: ☑ Part 1 ☑ Part 2 ☑ Part 3

Upon review of the information recorded on this EAF, as noted, plus this additional support information provided by the applicant

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the Town of Florida Planning Board as lead agency that:

☑ A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

☐ B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

☐ C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.

Name of Action: Route 5S Warehouse/Storage Facility

Name of Lead Agency: Town of Florida Planning Board

Name of Responsible Officer in Lead Agency: Michael Taylor

Title of Responsible Officer: Chairman

Signature of Responsible Officer in Lead Agency: Michael Taylor Date: 6/20/20

Signature of Preparer (if different from Responsible Officer) Date:

PRINT FULL FORM

Town of Florida
Planning Board
Thursday, December 12, 2019
7:00pm

MEMBERS PRESENT:
Mike Taylor, Chairman
Richard Romeo, Vice Chairman
Chris Holloway, Member
Don Perretta, Member
Rudy Horlbeck, Member
Matt Gogis, Alternate Member

ABSENT:
Kim Graff, Member
Charles Saul, Member

OTHERS PRESENT:
Amanda Bearcroft, Secretary/Consultant
Deb Slezak, Town Attorney
Paul Slansky, Town Code Enforcement Officer
John Sampone, Town Building Inspector

I. Call to Order

A meeting of the Town of Florida Planning Board was called to order at 7:01pm by Chairman Mike Taylor.

II. Adoption of the Agenda

Motion was made by Rudy Horlbeck and seconded by Chris Holloway to accept the Agenda. All other members present were in favor.

III. Adoption of Minutes

Motion was made by Don Perretta and seconded by Richard Romeo to accept the minutes from November 4, 2019. All other members present were in favor.

IV. Correspondence

There was no correspondence.

V. Interchange 27 Warehouse - Bohler Engineering

Steve Wilson from Bohler Engineering and Val Farro were present. They discussed the status of studies and next steps involved in the Interchange 27 warehouse project. Ms. Farro discussed the viewsheds of the site on neighboring properties. Mr. Wilson stated that the change in topography helps hide the building from the neighboring residential properties. The landscaping along the parking lot and building will also help to hide the activity. Tops of buildings will be able to be seen but not the whole site. Ms. Farro stated that they are not using moderately mature vegetation. They will be planting a mix of deciduous and year-round trees. If the tenant needs a smaller space that illustrated that will orientate the building closer to the topography that hides the building, so you would see less of the site.

Ms. Slezak wanted to know if the board was satisfied with the plan as it is laid out, especially after the last month's public hearing on the project. She wanted to know if all of the residents' concerns were reviewed and satisfied. Mr. Horlbeck stated that he thinks the concerns were addressed.

The board agreed that once a tenant was identified the tenant and firm would meet again with the Town Planning Board to go over their plan.

Douglas Cole of Prime Engineering, the TDE on the project, went through the two additional comment letters that were received and the SEQR Part II on the project along with the board. The TDE supplied the Board with a letter stating all of the conditions he believes the Town Planning Board should include with their approval of the project. That letter was submitted to the board as part of the final packet.

Part II of the SEQRA was read by Douglas Cole of Prime Engineering and all questions were answered. Since there was no moderate to large impact found a motion was made by Rudy Horlbeck and seconded by Mike Taylor to find that the proposed action will not result in any significant adverse environmental impacts and therefore constitutes a negative declaration for the SEQRA. All other members present were in favor.

Roll Call:
Mike Taylor – Yes
Richard Romeo – Yes
Don Perretta – Yes
Rudy Horlbeck – Yes
Rich Romeo – Yes
Christopher Holloway – Yes
Matt Gogis - Yes

A Resolution was proposed by Kim Graff and seconded by Rudy Horlbeck to approve the subdivision, special use permit, and site plan application for the Interchange Warehouse 27 Project. Whereas the formal resolution was read in front of the board.

Roll Call:
Mike Taylor – Yes
Richard Romeo – Yes
Don Perretta – Yes
Rudy Horlbeck – Yes
Rich Romeo – Yes
Christopher Holloway – Yes
Matt Gogis - Yes

VI. Winery/Brewery/Distillery/Cider Code Amendments

Mike Taylor wanted to know if the Town Planning Board could supply the Town Board with language to review. Matt Gogis spoke about doing research on other communities with micro beverage language in their zoning codes. He stated that most of them had language on a micro or a farm which focused on how much they were making or how large the building is. Ms. Bearcroft stated that since the Town's code is mostly zoned Agriculture to take a broader approach. It was suggested to look at just alcohol production as a definition and determine where in our zoning map this should be included or a special use permit. The approach might be to look at allowing alcohol production in certain zones as a special permit rather than a site plan approval. The

first step would be to draft up language for the Town Board to be presented at the next meeting to hear their comments and move forward with drafting up language for the code.

VII. Public Comment:

Terri Phillips, 189 Pattersonville Road: She had a question about where farm tourism and camping fell into the zoning code. Ms. Bearcroft stated that it would fall under the permitted farming use, or through the code under commercial recreation as a special permitted use. It should be under the farm use because tourists would be paying to stay and work on the land as a means of farm tourism.

VIII. Adjournment

A **Motion** was made by Richard Romeo and seconded by Rudy Horlbeck to adjourn at 8:44pm. All in favor.

Respectfully Submitted
Amanda Bearcroft

EXTERNAL: Use caution with attachments and links.

Thank you for the clarification. Since this project received a town neg dec prior to the Freshwater Wetland Jurisdiction and Classification regulations change and the project did not change to include more, but less impacts, this project will not need a freshwater wetland jurisdiction and can proceed with just a Water Quality Certification. Myself and Ron will still be reviewing this project to make sure it will fit our standards for the Water Quality Certification.

Thank you,

All,

To finish the thought for total clarity, the Army Corp permit was approved for 1.9 acres, and yes we will be amending to 1.5 acres, to be under both the Town's Approval, and the Corps.

Thank you,

Sean

DEPARTMENT OF THE ARMY
U.S. ARMY CORPS OF ENGINEERS, NEW YORK DISTRICT
JACOB K. JAVITS FEDERAL BUILDING
26 FEDERAL PLAZA
NEW YORK NEW YORK 10278-0090

Regulatory Branch December 9, 2024

SUBJECT: Modification (M1) Request for Department of the Army Permit No. NAN-2019-00679-USH
WE 5S, LLC
Commercial Development
Town of Florida, Montgomery County, New York

Adam Winstanley
WE 5S, LLC
300 George Street
New Haven, Connecticut 06511

Dear Mr. Winstanley:

In accordance with the provisions of Section 404 of the Clean Water Act (33 U.S.C. 1344), WE 5S, LLC, was issued Department of the Army (DA) Permit Number NAN-2019-00679-USH by the District Engineer on January 10, 2021. This permit authorized the discharge of fill material into 1.90 acres of waters of the United States, including wetlands, to facilitate the construction of an 800,000 square foot warehouse and distribution facility, in the Town of Florida, Montgomery County, New York.

The New York District has reviewed your submittal dated May 31, 2024, in which you requested a two-year extension of DA Permit No. NAN-2019-00679-USH to allow additional time to complete the project. This would make the new expiration date January 10, 2027. On July 22, 2024, the New York District received a response to the request for additional information, dated June 6, 2024, from your consultant, Bohler Engineering and Landscape Architecture, PLLC in a letter dated July 22, 2024. This was done to address specific concerns related to impacts to an endangered species, the Northern long-eared bat; to confirm that the purpose and need of the project is unchanged; to inquire about how much work has been completed to-date; and to clarify any potential changes in the project plans.

Based upon our evaluation of the submitted materials, we hereby approve your request to modify the subject permit. The modification of this permit shall be known as Department of the Army Permit Number NAN-2019-00679-M1. Apart from General Condition (1) and the additional special condition (F) that has been added to address potential impacts to the Northern long-eared bat, all other permit conditions to which the

authorized work was made subject shall remain in effect (copies enclosed). This letter shall be added to all copies of the permit, including those at the work site. The following General Condition (1) shall supersede General Condition (1) from the DA Permit Modification No. NAN-2019-00679-USH.

1. **The time limit for completing the work authorized ends on <u>January 10, 2027</u>. If you find that you need more time to complete the authorized activity, submit your request for a time extension to this office for consideration at least one month before the above date is reached.**

This condition (Special Condition F) related to tree clearing has been added to address the potential impact to an endangered species the Northern long-eared bat (*Myotis septentrionalis*) has been added to your authorization.

F. The permittee shall ensure that all tree cutting necessary to complete the authorized work shall only occur during the period from October 1 through March 31 in any year this verification is in effect.

In order for us to better serve you, please complete our Customer Service Survey located at:

http://www.nan.usace.army.mil/Missions/Regulatory/CustomerSurvey.aspx

If any questions should arise concerning this matter, please contact John Short, of my staff, at (518) 266-6354.

Sincerely,

Amy L. Mitchell

MEMORANDUM OF AGREEMENT AMONG THE UNITED STATES ARMY CORPS OF ENGINEERS, THE NEW YORK STATE HISTORIC PRESERVATION OFFICER, AND WE 5S, LLC REGARDING THE PROPOSED WAREHOUSE FACILITY, NYS ROUTE 5S, TOWN OF FLORIDA, MONTGOMERY COUNTY, NEW YORK

USACE PERMIT APPLICATION NUMBER NAN-2019-00679-USH

WHEREAS, the WE 5S, LLC proposes to construct a warehouse and distribution facility along NYS Route 5S in the Town of Florida, Montgomery County, New York ("the Project"); and

WHEREAS, pursuant to Section 404 of the Clean Water Act, 33 U.S.C. § 1344, USACE has been requested to issue a permit authorizing the discharge of fill material into approximately 1.90 acres of waters of the United States, including wetlands to facilitate construction of the Project; and

WHEREAS, the construction of 800,000 square foot warehouse and distribution facility with approximately 188 loading docks, 339 tractor trailer spaces, and parking spaces for 151 cars by the applicant is identified as the "Undertaking"; and

WHEREAS, USACE has defined the Permit Area for the Undertaking, as defined at 33 CFR Part 325, Appendix C, as described in Attachment 1; and

WHEREAS, USACE has determined that the Permit Area for the Undertaking is identical to the Area of Potential Effect; and

WHEREAS, USACE has determined that the undertaking will have an adverse effect on the J. Houck Historic Site (05704.000188), which is eligible for listing in the National Register of Historic Places; and

WHEREAS, USACE has consulted with the New York State Historic Preservation Officer ("SHPO") pursuant to Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108); Advisory Council of Historic Preservation (ACHP) implementing regulations at 36 CFR Part 800; USACE implementing regulations at 33 CFR Part 325, Appendix C, and subsequent interim guidance dated April 25, 2005 and January 31, 2007; and

WHEREAS, in accordance with 36 CFR § 800.6(a)(1), USACE has notified the Advisory Council on Historic Preservation (ACHP) of its adverse effects determination with specified documentation, and the ACHP has chosen not to participate in the consultation pursuant to 36 CFR § 800.6(a)(1)(iii); and

NOW, THEREFORE, USACE, SHPO, and WE 5S, LLC agree that the undertaking shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

STIPULATIONS

I. USACE Authorization. USACE shall ensure implementation of the terms of this MOA as a condition of the Permit.

II. WE 5S, LLC shall implement the Phase III Data Retrieval Plan (Attachment 2) and submit a report on the status of the implementation of same to the SHPO within twelve (12) months of the execution of this Agreement.

III. WE 5S, LLC shall submit to the USACE and the SHPO the Phase III Report as set forth in the Phase III Data Retrieval Plan, within eighteen (18) months of USACE issuance of authorization.

IV. WE 5S, LLC shall temporarily curate and protect all artifacts and other materials collected, including all notes, photographs, and other data generated during the performance of the Phase III data recovery, until all of these materials are accepted by a permanent curation facility in accordance with the Phase III Data Retrieval Plan.

V. In connection with the Phase III Data Retrieval Plan and artifacts obtained during the Phase III DRP excavations, WE 5S, LLC shall complete the permanent curation of the artifacts and shall convey the artifacts and other materials collected, within one (1) year after the date of SHPO and USACE approval of the Phase III Report to the New York State Museum or other facility approved by SHPO and USACE which will curate the artifacts and serve as the final repository.

VI. Within ten days of conveying the artifacts and the materials collected, WE 5S, LLC shall submit copies of the deed of gift, full copies of the artifact catalog and listing, and copies of a letter acknowledging receipt by the facility which will serve as the permanent curation facility, to SHPO and USACE.

VII. WE 5S, LLC shall complete dissemination of information to the public, as set forth in the Phase III Data Retrieval Plan, within six (6) months after the date of SHPO and USACE approval of the Phase III Report.

VIII. DURATION

This MOA will expire if its terms are not carried out within five (5) years from the date of its execution. Prior to such time, USACE may consult with the other signatories to reconsider the terms of the MOA and amend it in accordance with Stipulation XI.

IX. MONITORING AND REPORTING

Each year following the execution of this MOA until it expires or is terminated, WE 5S, LLC shall provide all parties to this MOA a summary report detailing work undertaken pursuant to its terms. Such report shall include any scheduling changes proposed, any problems encountered, and any disputes and objections received in USACE's efforts to carry out the terms of this MOA.

X. DISPUTE RESOLUTION

Should any signatory (either signatory or invited signatory) or concurring party to this MOA object at any time to any actions proposed or the manner in which the terms of this MOA are implemented, USACE shall consult with such party to resolve the objection. If USACE determines that such objection cannot be resolved, USACE will:

A. Forward all documentation relevant to the dispute, including USACE's proposed resolution, to the ACHP. The ACHP shall provide USACE with its advice on the resolution of the objection within thirty (30) days of receiving adequate documentation. Prior to reaching a final decision on the dispute, USACE shall prepare a written response that takes into account any timely advice or comments regarding the dispute from the ACHP, signatories and concurring parties, and provide them with a copy of this written response. USACE will then proceed according to its final decision.

B. If the ACHP does not provide its advice regarding the dispute within the thirty (30) day time period, USACE may make a final decision on the dispute and proceed accordingly. Prior to reaching such a final decision, USACE shall prepare a written response that takes into account any timely comments regarding the dispute from the signatories and concurring parties to the MOA, and provide them and the ACHP with a copy of such response.

C. USACE's responsibility to carry out all other actions subject to the terms of this MOA that are not the subject of the dispute remain unchanged.

XI. AMENDMENTS

This MOA may be amended when such an amendment is agreed to in writing by all signatories. The amendment will be effective on the date a copy signed by all the signatories is filed with the ACHP.

XII. TERMINATION

If any signatory to this MOA determines that its terms will not or cannot be carried out, that party shall immediately consult with the other signatories to attempt to develop an amendment per Stipulation XI, above. If within thirty (30) days (or another time period agreed to by all signatories) an amendment cannot be reached, any signatory may terminate the MOA upon written notification to the other signatories.

Once the MOA is terminated, and prior to work continuing on the Undertaking, USACE must either (a) execute an MOA pursuant to 36 CFR § 800.6 or (b) request, take into account, and respond to the comments of the ACHP under 36 CFR § 800.7. USACE shall notify the signatories as to the course of action it will pursue.

Execution of this MOA by USACE, SHPO, and WE 5S, LLC and implementation of its terms evidence that USACE has taken into account the effects of this undertaking on historic properties and afforded the ACHP an opportunity to comment.

MANAGEMENT SUMMARY

SHPO Project Review Number: *Not Yet Assigned*
Involved State and Federal Agencies: *Not Yet Determined*
Phase of Survey: *III (Data Retrieval Plan)*

LOCATION INFORMATION

Municipality: *Town of Florida*
County: *Montgomery*

SURVEY AREA

Length: *207 feet (63 meters)*
Width: *195 feet (60 meters)*
Acres: *0.85 acres*

RECOMMENDATIONS

This document provides a proposed Data Retrieval Plan for the J. Houck Historic Site located on property being developed as part of the Winstanley Distribution Center project. The site consists of the remains of a single-residential structure and an associated well located along the original route of State Highway 5S, which is now runs to the north of the site. The remains of the residence consist of a stone foundation with cellar hole, a collapsed brick fireback associated with a stone hearth built into the stone foundation and what appears to be an "L" shaped addition along the east and south sides of the structure. Our data suggests that main portion of the residence was built between 1820 and 1853 when it is first shown on historic maps. The addition was built sometime after 1888 based on the date of a coin found just below the stone floor slabs. The well is stone lined and still contains water. Efforts to examine any contents were hampered by a post-occupational deposit of field cobbles filling up to a depth of about 5 feet below the ground surface. The property was owned by the locally important Houck family over several generations who used the site as a rental property. It was occupied by a series of tenants, many of whom worked as laborers for the Houck family.

PHASE III DATE RETRIEVAL PLAN

1 Introduction

Hartgen Archeological Associates, Inc. (Hartgen) proposes to conduct a Phase III Date Retrieval at the J. Houck Historic Site, which is located within the Area of Potential Effects (APE) for the proposed Winstanley Distribution Center project in the Town of Florida, Montgomery County, New York. The site was first identified during a Phase I Archeological Investigation (Hartgen Archeological Associates 2019a). Hartgen returned for a Phase II Site Evaluation (Hartgen Archeological Associates 2019b) to determine the site boundaries and concluded that the site was National Register eligible (NRE) meeting eligibility Criteria B "are associated with the lives of persons significant in our past" (in this case the locally important Houck family) and Criteria D has "yielded, or may be likely to yield, information important in prehistory or history." Due to the location of the site, avoidance is not feasible. So, we are proposing that a Phase III Date Retrieval be conducted.

These investigations were conducted to comply with Section 14.09 of the State Historic Preservation Act and will be reviewed by the New York State Office of Parks, Recreation and Historic Preservation (OPRHP). The investigation was conducted according to the New York Archaeological Council's *Standards for Cultural Resource Investigations and the Curation of Archaeological Collections* (1994), which are endorsed by OPRHP. This report has been prepared according to OPRHP's *State Historic Preservation Office (SHPO) Phase I Archaeological Report Format Requirements* (2005).

2 Project Information

2.1 Project Location

The Project is located between New York State Bicycle Route 5, the New York State Thruway (I-90), and Mead Road, in the Town of Florida, Montgomery County, New York (Map 1).

2.2 Description of the Area of Potential Effects (APE)

The area of potential effects (APE) for the proposed construction project includes all portions of the property that will be directly altered by the undertaking. The APE encompasses ~120 acres. The Phase III Project Area is a much smaller 0.85 acre portion of the overall APE encompassing the J. Houck Historic Site including remains of a 19th-century farmhouse, associated well and area shown (by Phase I/II shovel testing) to contain related archeological materials.

2.3 Historic Context

Historic maps indicate that development occurred throughout the region, beginning prior to 1850. Five early-to mid-19th-century archeological sites have been recorded within one mile of the current Project, two located within 500 feet [Farm Complex 2, Fossgate/Houck Farm (The Jacob and Christina Houck House) (05704.000121) and Farm Complex 1, DeForest/Pettengill/Lohmeyer Farm (05704.000120)]. Three other reported farm sites are located north of the Project. All of these farm houses are visible on the 1853 Geil Montgomery Co. map (Geil and Hunter 1853). The property under study was owned by Charles Williams in the years immediately following the Revolutionary War (DeWitt 1802, 1847 [1790]) and was referred to as "Warrensborough" (Sauthier 1779).

The National Register Eligible (NRE) Jacob and Christina Houck House (Hartgen Archeological Associates 2008a, b) was located at the intersection of Hirschfield Road and NY State Highway 5S. The earlier Fossgate designation has been dropped as later research has revealed that the association was an error. Hirschfeld Road, which was once located near the intersection of Broadway and NY Rt. 5S, across the street from the current Project, was removed sometime after 2003. It was replaced by "Nutritious Pl." and the distribution center

complex. The Beech-Nut Relocation Project was located just north of the current Project, on the opposite side of NY-Route 5S.

Maps indicate additional historic developments in the Phase I Project. Late 19th- to mid-20th-century maps, dating between 1895 and 1947, depict a historic road through the APE (Old Route 5S), which appears to follow the current V-shaped tree line containing the features under investigation. On late 19th to early 20th-century maps, two map-documented structures appear along this road (MDS 1 and 2). They were incorrectly labeled "J. Hawke", rather than Houck. Both are first visible on the 1853 map by Geil (Geil and Hunter 1853). It appears that MDS 1, which is located at the southern point of the angle in the highway, is the structure currently being investigated.

Surface survey has not located any structure in the location of MDS 2 as shown on the Geil map, nor have shovel tests produced remains in the vicinity. It is probable that the structure shown actually represents the Jacob and Christina Houck house, which is located farther east along the same roadway and is missing from its correct location on the map despite being a very prominent and well known structure (See Figure 5).

MDS 1 is depicted on maps through 1924 (Century Map Company 1905; Nichols 1868), after which it is absent. It is likely that the house had been demolished prior to 1924, as a series of topo maps from 1895 to 1924 look virtually identical and were apparently not updated. The next available 1931 map (the first to not depict the structure) shows a number of major differences and clearly represents new, updated mapping. However, it appears that the structure was definitely still present as of 1905 (Century Map Company 1905). MDS 2, The Jacob and Christina Houck house, continues to be shown our most recent maps (New York State Department of Transportation (NYSDOT) 1992). It was carefully dismantled in 2008 with plans to re-erect it in another location (Hartgen Archeological Associates 2008a, b). Topo maps indicate that Route 5S was reraligned to its current configuration by 1947 (present-day NYS Bicycle Route 5) (United States Geological Survey (USGS) 1947) and two houses were constructed on lots north of the former roadway. The Old Route 5S ran along the properties' southern boundaries, along or through what is currently a tree line.

Research on the Houck properties is somewhat complicated by the repeated use of certain family names generation after generation. The first Jacob Houck was born between 1770 and 1780 as was his wife Christina. Jacob had a brother by the name of Peter. Jacob and Christina had four children, Isaac, Jacob, Catherine and Christina. Isaac, who was born in 1803, went on to marry a woman who was also called Christina. He inherited his father's house and remained there until his death in 1850. The couple had two sons, Jacob and Peter. Jacob, who was born in 1833, went on to inherit the house and remained there until his death in 1905. This is the "J. Hawke/J. Houck" whose name is associated with the property in the available historic maps. He and his wife Adeline had no children of their own. But, they adopted Jennie Miller (later Houck), his brother Peter's daughter. A forth Jacob, Jacob TenEyck, also shows up in various records. He appears to be the son of Christina, widowed daughter of the original Jacob and Isaac's sister.

Table 1. Summarized Houck family genealogy

Generation	First name	Last name	Birth	Death	Relationship	Children	Residence
1	Jacob (1)	Houck	1770-1780	1839	Husband to Christina (married 1799)	Isaac, Jacob (2), Catherine (1) and Christine (2)	Jacob and Christina House
1	Christina (1)	Entis	1770-1780	1849	Wife of Jacob (1) (married 1799)	Isaac, Jacob (2) 2 daughters	Jacob and Christina House
1	Peter (1)	Houck			Brother of Jacob	?	
2	Isaac	Houck	1803	1850	Son of Jacob (1) and Christina	Jacob, Peter, Maria (?)	Jacob and Christina House (owner as of 1840)
2	Catherine (Katie)		1810-1813	1890	Wife of Isaac	Jacob, Peter, Maria (?)	
2	Jacob (2)	Houck			Son of Jacob (1) and Christina	?	

Generation	First name	Last name	Birth	Death	Relationship	Children	Residence
2	Catherine (1)				Daughters of Jacob (1)		
2	Christina (2)				Daughters of Jacob (1)		
3	Jacob (3)	Houck	1833	1905	Son of Isaac and Catherine/Grandson of Jacob (1)	Adopted Jennie Miller	Jacob and Christina House (owner from 1850-1905)
3	Adeline	Van Horn	1833	1903	Wife of Jacob (3)	Adopted Jennie Miller	
3	Peter (2)	Houck	1839		Son of Isaac and Catherine/Grandson of Jacob (1)	Jennie (Jane) Miller	
3	Jacob	TenEyck			Son of Catherine (1) (?)/Grandson of Jacob (1)		
3	Catherine (2)	TenEyck (?)			Daughter of Catherine		
3	Christina (3)	TenEyck (?)			Daughter of Catherine		
3	Elizabeth	TenEyck (?)			Daughter of Catherine		
4	Jennie (Jane)	Miller	1866		Daughter of Peter (2) adopted by Jacob (3)		

Hartgen conducted deed research to reconstruct the ownership history of the property under study. The first deed found for this property equaling ± 200 acres was between brothers Peter and Jacob Houck, grantees and John Watts, grantor in 1793. This property was described in the deed as follows:

> …as a part of a tract of land called Warrensborough and included within that tract therof which was heretofore sold and conveyed by Henry Gage & Susanna his wife & their trustees to the said party of the first part and is known in a map of the subdivision thereof made by John R. Bleecker Surveyor, in the year 1766, by Lot No. one hundred and forty seven…(Montgomery County Clerk 1793).

This area was referred to as Warrensborough in the eighteenth century (Sauthier 1779). Sometime between 1793 and 1839 Peter Houck granted his portion of this property to his brother Jacob Houck, although no deed has been found describing this transaction.

Jacob Houck married Christina Entis on January 27, 1799 according to a Dutch Reformed Church marriage record (Ancestry.com 2019a). Jacob died in 1839 granting this property to his eldest son, Isaac Houck. This transaction is described in great detail in his will executed on March 7, 1839. Also, in this will, Jacob Houck conveyed another piece of land to his two sons, Jacob and Isaac. The land was described as:

> A certain piece of land situated in Florida which has been for some years past in possession of James Greenman, Esq. containing about eighteen acres of Land, and bounded as follows, north by lands belonging to me, east by the George Servoss farm, south by the highway and west by James Greenmans land, the said Jacob and Isaac or the survivor of them shall whenever they shall deem it desired and proper to do to sell and convey the said land in fee simple, and out of the proceeds of said sale shall educate, support and maintain my grandson, Jacob A. TenEyck and if there be any surplus left pay the same to him when he arrives at the age of twenty one years. I give to my said grandson Jacob my silver watch, and it is my desire and I hereby request that my sons Jacob & Isaac shall take care of and provide of my said

> grandson until he shall arrive to an age when he shall be capable of taking care of himself. I do also order & direct that my son Isaac shall give my grandson Jacob a house when he arrives of age to be worth sixty or seventy dollars…(Ancestry.com 2019b).

This description fits the property under study perfectly when correlated with historic maps identifying the adjacent property owners. While the will specified that the sons can sell the land if wished, the fact that it remains identified as belonging to the Houck's into the 20th century indicates that they did not. It is unclear where the house that Jacob wanted constructed for his grandson Jacob TenEyck was located, or if it was even built. However, it does not appear to be the house being investigated. Indications are that it was built near the time of the property transfer. But, it is not clear if it was before or after. Jacob Ten Eyck does not appear in census records relating to the property.

Isaac Houck and his wife, Catherine had two sons, Jacob and Peter. After the death of Isaac in 1850, this property was transferred to Isaac's son, Jacob Houck, although no deed or will record could be located explaining this transaction (Montgomery County History and Archives n.d.). Given the range of possible dates for the house under study, Jacob may have built it when he received the property. Jacob Houck maintained the ownership of this property from 1850 until his death in 1905. Jacob and his wife, Adeline had no children of their own. But, they are known to have adopted Jennie (Jane) Miller. A will for Jacob Houck was found which was executed on September 8, 1905 (Ancestry.com 2019c). Interestingly, their adopted daughter is not listed as a beneficiary.

The following table lists the chain of ownership for the Project from before 1793 to 1905.

Table 2. Chai of ownership from 1793 to 1905 of the larger Houck property

Date	Rec'd Date	Grantee	Grantor	Book, Page		Acres	$	Notes
Unknown	Unknown	John Watts	Henry and Susanna Gage					This transaction is described in Deed 4: Liber 257 when John Watts sold the property to Peter and Jacob Houck
21 September 1793	17 October-1793	Peter and Jacob Houck	John Watts	4:257		±200	800 pounds	
7 March 1839	7 March 1839	Jacob Houck	Isaac Houck					By will
8 September 1905	8 September 1905	Jacob A. TenEyck, Anna C. Hills, Ira Mann, Sophia Van Vechten, Remelia Young, Chester Lerudrum, Catherine Diety	Jacob Houck					By will, John P. Miller was executor; Isaac Van Vechten was administrator of goods

Census records have been consulted to determine the individuals present in both the Jacob and Christina Houck house. In addition, they provide critical information on tenants that would have occupied the rental properties owned by the Houck family. The first population record for Jacob Houck was in 1810 when he was between 25 and 45 years of age. At this time, he was living in the Jacob and Christina Houck House, east of the J. Houck Historic site. He was listed in the population census as living with one woman of the same age, four children and two slaves (United States Census Bureau 1810). By 1820, the population census listed him as living with one woman, five children/young adults, two slaves (one adult male and one young adult female), and one free African American female under the age of fourteen (United States Census Bureau 1820).

This is the last census that shows the family owning any slaves. However, labor provided by African Americans remained important to the family's income. In 1830, Jacob Houck was between 50 and 60 years of age and

lived with one woman of the same age, two young adult men, one boy, one young adult female, one girl, and one free African American male between 10 and 23 years of age (United States Census Bureau 1830). According to cemetery records, Jacob Houck died in 1839 (Montgomery County History and Archives n.d.).

By 1840, the ownership of the Jacob and Christina Houck House was transferred to Jacob's son Isaac Houck. In the 1840 population census, Isaac Houck was listed as the head of the family between the age of 30 and 40. He lived with one female the same age, four boys, 1 young adult female, three girls, and one female between 50-60 years of age (United States Census Bureau 1840). Christina Houck, the wife of Jacob and the mother of Isaac died in 1847 according to cemetery records (Montgomery County History and Archives n.d.).

In 1850, Isaac Houck was recorded at age 47 and living with his wife, Catherine, age 37. They had two sons, Jacob and Peter. 64 year old Maria Houck was living with them in this year (United States Census Bureau 1850b). Perhaps Maria Houck was Jacob's sister, but no documentation was found to support that assumption. In this year, Isaac Houck's farm was valued at $10,000 and he farmed 170 acres of land. His main crops were oats, rye, and corn. He had 9 horses, 4 milk cows, 9 beef cattle, 2 oxen, 34 sheep and 9 pigs. His livestock was valued at $718 (United States Census Bureau 1850a).

According to cemetery records, Isaac Houck died in 1850 (Montgomery County History and Archives n.d.). His son, Jacob, acquired the property of the Houck estate and was listed as the head of the household in the 1860 population census at the age of 27, living with his wife, Adeline. His brother, Peter, and his mother, Catherine also resided with him. An African American 16-year old boy named James Dennis, most likely a farm laborer also was listed in the household.

After analysis of the 1860 population census record, it was determined that African American John Miller and his wife Jane were living in the house at the J. Houck Historic Site. It is believed that John Miller who was listed as a farm laborer in the population census living directly adjacent positioned west of the Jacob and Christina Houck House, was working for Jacob Houck and living in this house on the Houck estate (United States Census Bureau 1860b). According to the 1860 agricultural census, the amount of land farmed increased to 264 acres, and the value of the farm increased to $16,000. The main crops in this year were oats and corn. The value of livestock increased to $1,400 which included 5 8 horses, milk cows, 20 beef cattle, 4 oxen, 45 sheep, and 5 pigs. John Miller was not listed in the agricultural census of this year considering only landowners appear to be recorded at this time (United States Census Bureau 1860a).

By 1870, James Dennis no longer lived at the household, but Jennie (Jane) Miller, a four-year old girl lived with the family. It is believed that this child, Peter's daughter and later adopted daughter of Jacob, was a relation to John and Jane Miller who lived next door in 1860 (most likely the granddaughter of Jane Miller). John and Jane Miller were listed as living in a different area of the town of Florida according to the population census for that year. After an examination of the 1870 population records, it is thought that farmer, Loronzo Lisdell rented farm land from Jacob Houck as well as the house which stood at the J. Houck Historic Site. He was age 23 in 1870 and lived with his young wife, Anna and their daughter, Minnie. He is not recorded as owning any real estate in the population census, but having $100 for his personal estate. There is another young farmer who lived directly next door. Jay Burt, 25 years old, was also most likely renting farmland from Jacob Houck. It is probable that he lived in what is known as the Houck Tenant Farmhouse which was situated directly west of the Jacob and Christina Houck House.

Jay Burt lived with his young wife, Lydia and their 2-year old daughter, Amy (United States Census Bureau 1870b). Neither Loronzo Lisdell nor Jay Burt were listed in the 1870 agricultural census because they were not property owners. According to the agricultural census of this year, the Houck farm decreased in acreage down to 180 acres, but maintained the same value most likely because Houck was renting out approximately 85 acres of farmland. The main crop continued to be oats, with an increase in their wheat crop. The farm was still heavy with livestock maintaining 10 horses, 6 milk cows, 6 beef cattle, 2 working oxen, 23 sheep, 3 pigs, and 210 chickens (United States Census Bureau 1870a).

After the analysis of an 1875 state census record, it became clear that Jennie (Jane) Miller who was listed in the 1860 population census living with the Houck family was in fact Peter Houck's daughter (New York State

Census Bureau 1875), likely with a daughter of John and Jane Miller. She is listed in the records as Jacob's niece. She was eventually adopted by Jacob and Adeline who had no children of their own, changing her name to Houck and eventually being buried in the family cemetery. By 1880, Peter and Jennie did not live at the Jacob and Christina Houck House. In this year, Jacob Houck and his wife, Adeline continued to live in the main house with Jacob's mother, Catherine. They had a female servant from Prussia living with them and two male farm laborers. It is believed that the two male farm laborers were living in the tenant farmhouse. Living directly next door to Jacob Houck was farmer, Timothy Fero and his family. It is very possible that the Fero family lived in the house which used to stand at the J. Houck Historic Site. In 1880, Timothy Fero was listed at age 44 and his wife, Dorcas, who was recorded as aged 48. The couple had two teenage children (United States Census Bureau 1880b). According to the 1880 agricultural census, Timothy Fero was renting 85 acres of farmland in that year. It is believed that Fero was renting farmland from Jacob Houck while living at the J. Houck Historic Site. The 1880 federal census was the first year recorded if a farmer was the owner or renter.

Jacob Houck's farm increased in value between 1870 and 1880 by $6,000. His main crop was still oats, but did increase his buckwheat and corn crop. His wheat crop diminished from 200 bushels down to 18 bushels in that year. Houck had 6 horses, 5 milk cows, 7 beef cattle, 2 working oxen, 30 sheep, 5 pigs, and 120 chickens. Recorded immediately adjacent to Jacob Houck, was Timothy Fero in the 1880 agricultural census. Fero rented 86 acres of farmland from Houck in that year and his farm was valued at $9,000. His main crop was also oats, with his next largest crop being corn. He had 2 horses, 6 milk cows, 9 beef cattle, and 12 chickens. There are no later agricultural censuses available after 1880 (United States Census Bureau 1880a).

According to the 1892 state census, Jacob Houck and his wife Adeline were both 60 years old in that year, and his mother Catherine was 81. They had a seventeen year old female servant living with them, and an eighteen-year old male laborer possibly living at the tenant farmhouse. It is believed that African American Benjamin Havens and his wife Grace Havens lived at the house at the J. Houck Historic site in this year. The state census does not distinguish between households as the federal census does, so it is unclear if they lived in a separate house from the Houck family (New York State Census Bureau 1892).

Catherine Houck died in 1898 reported by the New York State Death Index (Ancestry.com 2019d). In 1900, Jacob and Adeline Houck continued to occupy the Jacob and Christina Houck House. Living with them in this year was a young female servant and a young male farm laborer. Recorded living next door in the population census was John and Kate Miller. John Miller was listed as a 32-year old farm laborer who rented out the house which he occupied. It is supposed that he and his wife were living in the Houck Tenant Farmhouse at this time. William Sanders and his family was recorded living next to the Miller's. William Sanders was documented as a 40-year old farmer who rented out a house. Living with him was his wife, Amelia and their four sons. It is believed that the Sander family was renting out the house which used to be situated at the J. Houck Historic Site.

According to cemetery records, Adeline Houck, wife of Jacob Houck died in 1903 at the age of 70 and Jacob Houck died in 1905 at the age of 72 (Montgomery County History and Archives n.d.).

After the analysis of historical maps, it has been determined that the house which used to be situated at the J. Houck Historic site was demolished between 1905 and 1931, probably closer to the earlier date (Century Map Company 1905; USGS 1931).

The following table summarizes the known (or suspected) identities of the tenants renting either the Houck Tenant Farmhouse adjacent to the main house or the J. Houck Historic Site home that is the focus of this study between 1860 and 1900. Due to the timing of censuses, it is likely that additional renters were present in the two properties which were not recorded.

Table 3. Summary of occupation of the J. Houck Historic Site home site.

First Name	Last Name	Residence	Age	Census year	Occupation	Note
John	Miller	J. Houck Historic Site	45	1860	Farm laborer	African American
Jane	Miller	J. Houck Historic Site	45	1860		African American

2.4 Previous Archeological Study

The J. Houck Historic Site was initially identified during Hartgen's Phase I Archeological Investigation of a 140 acre parcel of land that will be developed as part of the Winstanley Distribution Center project (Hartgen Archeological Associates 2019a). During the Phase IB shovel testing, a total of 1014 tests were excavated at 15 meter (50 foot) intervals. Seven of those tests were positive for historic artifacts. Six of the positives were located in close proximity to a cut stone foundation and well also recorded during the study. The location matched the position of the J. Houck property first identified during the Phase IA study.

These findings resulted in a Phase II Site Evaluation intended to establish the site boundaries and determine National Register eligibility (Hartgen Archeological Associates 2019b). A total of 64 additional shovel tests were excavated during Phase II. Fifty-eight of those were placed at 8 meter (26 foot) intervals surrounding the foundation, well and previous positive tests. Six tests at 2 meter intervals were excavated in a line extending north from the centerline of the stone foundations in hopes of locating a privy or other structure associated with the foundations. A privy was not identified. But, the testing allowed us to establish site boundaries. In addition nine units were excavated revealing a total of 8.5 m^2. Those tests revealed significant data used to establish the dating of the structure and refine our understanding of the architecture present. An effort was also made to core the sediment at the bottom of the well to determine if any artifacts were present. However, discarded field cobbles blocked access to the lower levels.

Table 4. Summary of Phase II field investigations

Field method	Qty/Area	Rationale	Results
Shovel tests	64 tests	Conducted to determine the site boundaries and chronology	Site boundaries were established based in drop-off of archeological materials. TPQ dates had large range from 1780 to 1920 suggesting long term use of the site before and after residence was present.
Units	9/8.5 m^2	Conducted to investigate structure form, function and chronology	Some ambiguity remains about the form of the structure. Excavations suggested the visible foundation and cellar hole were the original structure dating between 1820 and 1853 when it appears on the Geil map. Stone walls and floor slabs suggest that the structure had at least one addition wrapping around the east and south sides added sometime after 1888.

3 Research Questions

The J. Houck Historic Site has the potential to answer a wide range of research questions. These include the following:

- Phase II investigations suggested that the residential structure was expanded decades after the initial construction of the stone foundations and cellar. Can a more detailed construction history and chronology of the residential structure and its possible additions be reconstructed? Are any activity areas evident from the remains of the structure?

- Unit 1 from our Phase II study was terminated after it filled with ground water and did not reach the floor of the cellar. Can the floor be exposed and activity areas defined with the water table lowered through the excavation of a sump?

- Previous work did not reveal the location of a privy, a common feature of 19th-century houses which often provides significant preserved remains that can shed light on a variety of issues. Can a privy or other important features, such as middens, be located?

- If so, can study of the night soils give us data on the health and diet of the home's residents? Can their remains help us reconstruct the socioeconomic status and or ethnicity of the households occupying the site?

- Initial examination of the existing well feature suggests that it has been blocked with deposited field cobbles following abandonment of the residence. Does the well contain archeological remains below the field cobbles which could help us reconstruct life in this rural farmstead?

- Are there remains of the second structure (likely a barn) shown on the 1905 Century map? If so, is there evidence of its function remaining in the archeological record?

- Historical research on the property suggest that it was a rental home occupied by a series of tenant farmers, most working for the Houck family, who owned the residence and surrounding farmland. Previous research at the Jacob and Christina Houck House (Hartgen Archeological Associates 2003, 2008a) provided us information on their lifeways. How do the lives of tenants renting this property differ from those of their Houck Family landlords?

- Historical research revealed that several of these tenant farmers were African Americans living in the decades immediately following manumission of enslaved individuals in New York state. The Houck family is shown to have owned slaves as of the 1820 census (United States Census Bureau 1820). However, they continued to rely on labor provided by free African Americans long after that date. Can we recover information that would illuminate how ethnicity, social class and socioeconomic status were expressed and interrelated in rural New York communities during the 19th century? Can that data help us understand how African American laborers and former slave owners transitioned from enslaved labor to freedom?

It is not guaranteed that this research will provide answers to all of these questions nor will we restrict our investigations to just these questions if others can be answered by the remains discovered during the Data Recovery.

4 Data Collection Methods

To address the above research questions, Hartgen will conduct the following data retrieval excavations:

Method	Quantity	Approach/Rationale
Unit Excavation	8 square meters	• Investigate activities within the cellar hole • Investigate layout of structure and addition. • Investigate deposits around the well. • Sample middens and other artifact bearing deposits.
Mechanical Trenching	Approximately 10 meters	• Expose well in profile to locate any artifact bearing deposits. • Expose stratigraphy within cellar hole, stripping away cobbles and post-abandonment deposits.
Mechanical Stripping	Up to 500 square meters	• Locate privy, middens, trash pits, outbuildings or other features and to expose foundations and cellars.
Feature Excavation	Up to 3 subsurface features (not including foundations)	• Map and photograph all features. • Collect soil samples as warranted.

4.1 Unit Excavation

Units will be rectangular with dimensions of one-by-one or one-by-two meters (3.3 by 3.3. or 3.3 by 6.6 m). Soil levels will be excavated separately, and all excavated soil passed through 0.25-inch hardware mesh and examined for historic artifacts. Soil depths, Munsell colors, textures, artifact content, and other relevant observations were recorded (Munsell Color 2000). Profiles and plan views will be drawn when appropriate. The location of each unit will be mapped with a Trimble Geo7X GPS unit and plotted on the project map. Unit

excavation fieldwork and unit wall stratigraphy will be photographed. Unit excavation and mechanical trenching will be aided through the digging of a sump to lower the current water table.

4.2 Mechanical Trenching

Backhoe trench excavation will be directed by the archeological crew. Trenches will be excavated stratigraphically and soils were piled next to each trench and investigated for artifacts. Selected soils will be screened through 0.25-inch hardware mesh and examined for historic artifacts. Trench walls will be cleaned and examined for artifacts in trenches that were less than four feet deep, and the walls will be profiled and photographed. Trenches greater than four feet deep will be documented from the surface. If artifact bearing deposits are found at the base of the well, the area will be sloped to allow safe access for hand excavation. Trench locations will be mapped with a Trimble Geo7X GPS unit and plotted on the project map.

4.3 Mechanical Stripping

Mechanical excavation equipment with a toothless bucket will be used to removal the plowzone in selected areas as well as more fully expose foundations and cellar holes. An archeologist will direct the excavator to carefully remove the overlying stratum and expose the boundary with in situ subsoil. Archeologists will then hand scrape the uppermost portion of the subsoil stratum while inspecting for the presence of archeological features. The depth of mechanical soil removal will be about 1 foot in the rear of the house, and several feet within the foundation. The limits of the stripped area will be mapped with a Trimble GPS unit and plotted on the project map.

4.4 Feature Excavation

Features encountered during the unit excavations and mechanical stripping will be bisected, recorded, and excavated by stratigraphic levels. All artifacts will be collected. Samples of feature soils and charcoal will be collected. Profiles and plan view will be drawn when appropriate. The location of each feature will be mapped with a Trimble GPS unit and plotted on the project map. Feature excavations will be photographed.

4.5 General Documentation of the Excavations

Documentation of the excavations will include digital photography. General views of the site and the various phases of the investigation including all of the excavations will be recorded for inclusion in the final report.

The fieldwork will be followed by documentation of the excavations, laboratory analysis, curation of the archeological assemblage obtained during the fieldwork, comparative studies with artifact assemblages from other 19th-century historic sites, and report preparation. As part of compliance and in consultation with SHPO staff, other products such as a public information plan, may also be undertaken.

4.6 Treatment of Human Remains

In the event that human remains are identified during the data retrieval excavations, the archeologists will stop work in the vicinity of the find and immediately notify Winstanley Construction Management, LLC. Hartgen will ensure that the appropriate measures are taken in the treatment of the human remains and artifacts associated with the grave. The SHPO human remains protocol is attached

5 Laboratory and Analytical Techniques

5.1 Artifacts and Laboratory

As general procedure, significant historic artifacts such as glass, ceramics, food remains, hardware, and miscellaneous items will be collected. Coal, ash, cinder, brick, and modern materials will be noted. Artifacts collected will be placed in paper or plastic bags labeled by provenience and inventoried in a bag list. Artifacts

will be cleaned and cataloged in a database or spreadsheet, such as Microsoft Access or Excel. A copy of the complete catalog will be included in the report.

5.2 Specialized Analyses

The data recovery effort will include the use of analytical techniques selected based the potential to produce unique information. The techniques and the quantity of samples selected for each technique will depend on the types of artifacts and deposits recovered during the fieldwork. Examples of the types of analyses that may be conducted are listed below:

- Floral and pollen analysis to identify species present.
- Faunal analysis to identify species, cut, minimum number of individuals, and butchering methods.
- Parasite analysis to identify parasitic infections carried by the site occupants, which can shed light on the nutrition, disease, living conditions and overall health of the individuals.
- Trace element analysis of privy deposits which can shed light on the types of medications that were in use.
- DNA analysis of residue from pipe stems or other potential sources for information on ethnicity.

Samples will be collected from temporally discrete deposits with the potential to contain dietary remnants. Standard techniques will be followed for collecting samples to assure they are not contaminated by soil from strata above or below.

The following estimates serve to demonstrate the level of effort that will be devoted to analytical techniques; the actual techniques employed and the quantity of samples analyzed may differ.

- Floral analysis: 1 sample
- Pollen analysis: 1 sample
- Faunal analysis: 100 specimens

5.3 Curation

The cultural material assemblage from the data recovery study will make an important contribution to the study of New York history. As such, the collection should be placed in a suitable repository where it will be available for archeologists and other scholars to use in comparative analyses and studies. The New York State Museum (NYSM) is considered a suitable final repository for the collection. If the NYSM does not accept the collection, Hartgen will work with SHPO to find a viable alternative repository.

6 Deliverables

6.1 End of Fieldwork Letter

Following completion of the Phase III data retrieval fieldwork, Hartgen will prepare an end-of-field work letter demonstrating that the fieldwork component of this DRP has been completed and summarizing preliminary results of the study. This document will be submitted to SHPO with the recommendation that construction be permitted to proceed within the site area while the Phase III report is prepared.

6.2 Report

Hartgen will author the Phase III report in accordance with this DRP, OPRHP's *State Historic Preservation Office (SHPO) Phase I Archaeological Report Format Requirements* (2005) and the New York Archaeological Council's *Standards for Cultural Resource Investigations and the Curation of Archaeological Collections* (1994). As appropriate, the report will contain text, tables, color maps and photographs, scale drawings, and an artifact inventory. Hartgen will provide a PDF version of the draft report for the client's review. The client will compile and submit all comments to Hartgen in a single submission. Hartgen will address one round of comments, making revisions

to the report as appropriate. Hartgen will issue a PDF copy of the final report. A copy of the final report will be uploaded to OPRHP via CRIS.

6.3 Public Information Plan

Hartgen will take the following steps to disseminate the results of the Phase III data retrieval study to the public:

- Distribute full-color hard copies and electronic copies of the final Phase III report to the Montgomery County Historical Society and one local library to ensure long-term accessibility of the information to the local community.
- Create a J. Houck Historic Site archeology resource in the Digital Archaeological Record (tDAR), an international digital repository for the digital records of archaeological investigations. tDAR's use, development, and maintenance are governed by Digital Antiquity, an organization dedicated to ensuring the long-term preservation of irreplaceable archaeological data and to broadening the access to these data.

Appendix 1: Protocol for the Unanticipated Discovery of Human Remains

State Historic Preservation Office/
New York State Office of Parks, Recreation and Historic Preservation
Human Remains Discovery Protocol
(August 2018)

If human remains are encountered during construction or archaeological investigations, the New York State Historic Preservation Office (SHPO) recommends that the following protocol is implemented:

- Human remains must be treated with dignity and respect at all times. Should human remains or suspected human remains be encountered, work in the general area of the discovery will stop immediately and the location will be secured and protected from damage and disturbance.

- If skeletal remains are identified and the archaeologist is not able to conclusively determine whether they are human, the remains and any associated materials must be left in place. A qualified forensic anthropologist, bioarchaeologist or physical anthropologist will assess the remains in situ to help determine if they are human.

- No skeletal remains or associated materials will be collected or removed until appropriate consultation has taken place and a plan of action has been developed.

- The SHPO, the appropriate Indian Nations, the involved state and federal agencies, the coroner, and local law enforcement will be notified immediately. Requirements of the corner and local law enforcement will be adhered to. A qualified forensic anthropologist, bioarchaeologist or physical anthropologist will assess the remains in situ to help determine if the remains are Native American or non-Native American.

- If human remains are determined to be Native American, they will be left in place and protected from further disturbance until a plan for their avoidance or removal can be generated. Please note that avoidance is the preferred option of the SHPO and the Indian Nations. The involved agency will consult SHPO and the appropriate Indian Nations to develop a plan of action that is consistent with the Native American Graves Protection and Repatriation Act (NAGPRA) guidance. Photographs of Native American human remains and associated funerary objects should not be taken without consulting with the involved Indian Nations.

- If human remains are determined to be non-Native American, the remains will be left in place and protected from further disturbance until a plan for their avoidance or removal can be generated. Please note that avoidance is the preferred option of the SHPO. Consultation with the SHPO and other appropriate parties will be required to determine a plan of action.

- To protect human remains from possible damage, the SHPO recommends that burial information not be released to the public.

DEPARTMENT OF THE ARMY
U.S. ARMY CORPS OF ENGINEERS, NEW YORK DISTRICT
JACOB K. JAVITS FEDERAL BUILDING
26 FEDERAL PLAZA
NEW YORK NEW YORK 10278-0090

Regulatory Branch January 10, 2022

SUBJECT: Permit Application Number NAN-2019-00679-USH
by WE 5S, LLC
Town of Florida, Montgomery County, New York

Adam Winstanley
WE 5S, LLC
300 George Street
New Haven, Connecticut 06511

Dear Mr. Winstanley:

Enclosed is a Department of the Army permit for your work.

You are required to submit to this office the dates of commencement and completion of your work. Enclosed are two forms for you to use to submit the required dates.

If for any reason, a change in your plans or construction methods is found necessary, please contact us immediately to discuss modification of your permit. Any changes must be approved before they are undertaken.

In order for us to better serve you, please complete our Customer Service Survey located at:

http://www.nan.usace.army.mil/Missions/Regulatory/CustomerSurvey.aspx

Sincerely,

Stephan A. Ryba
Chief, Regulatory Branch

Enclosures

PLEASE USE THE ABOVE 18-CHARACTER FILE NUMBER ON ALL CORRESPONDENCE WITH THIS OFFICE

DEPARTMENT OF THE ARMY PERMIT

Permittee: Adam Winstanley
WE 5S, LLC
300 George Street
New Haven, Connecticut 06511
(978-287-8631)

Permit Number: NAN-2019-00679-USH

Permit Date: January 10, 2022

Issuing Office: U.S. Army Corps of Engineers, New York District

NOTE: The term "you" and its derivatives, as used in this permit, means the permittee or any future transferee. The term "this office" refers to the appropriate district or division office of the Corps of Engineers having jurisdiction over the permitted activity or the appropriate official of that office acting under the authority of the commanding officer. You are authorized to perform work in accordance with the terms and conditions specified below.

Project Description: The proposed work includes the discharge of fill material into a total of 1.90 acres of wetlands, including palustrine emergent (1.50), and palustrine scrub-shrub (0.40) wetlands, to facilitate the construction of an 800,000 square foot warehouse and distribution facility. In addition, the project will include a parking area capable of accommodating approximately 151 cars, along with approximately 339 tractor trailer spaces, and 188 loading docks.

To mitigate for unavoidable impacts to waters of the United States, the applicant is required to purchase 2.3 wetland credits from The Wetland Trust Susquehanna Basin Headwaters and Adjacent Basins In-Lieu Fee Mitigation Program, Mohawk Service Area – HUC (02020004), for the permanent impacts to waters of the United States.

All work shall be performed in accordance with the attached thirteen (13) dated permit drawings and Special Conditions (A) thru (E) listed below, all of which are hereby made part of this permit.

Project Location: IN: Wetlands

AT: Town of Florida, Montgomery County, New York

Permit Conditions:

General Conditions:

1. Time limit for completing the regulated work authorized herein ends on January 10, 2025. If you find that you need more time to complete the authorized activity, submit your request for a time extension to this office for consideration at least two (2) months before the above date is reached.

2. You must maintain the activity authorized by this permit in good condition and in conformance with the terms and conditions of this permit. You are not relieved of this requirement if you abandon the permitted activity, although you may make a good faith transfer to a third party in compliance with General Condition 4 below. Should you wish to cease to maintain the authorized activity or should you desire to abandon it without a good faith transfer, you must obtain a modification of this permit from this office, which may require restoration of the area.

3. If you discover any previously unknown historic or archeological remains while accomplishing the activity authorized by this permit, you must immediately notify this office of what you have found. We will initiate the Federal and state coordination required to determine if the remains warrant a recovery effort or if the site is eligible for listing in the National Register of Historic Places.

4. If you sell the property associated with this permit, you must obtain the signature of the new owner in the space provided and forward a copy of the permit to this office to validate the transfer of this authorization.

5. If a conditioned Section 401 of the Clean Water Act water quality certification has been issued for your project, you must comply with the conditions specified in the certification as special conditions to this permit. For your convenience, a copy of the certification is attached if it contains such conditions.

6. The permittee shall allow representatives from this office to inspect the authorized activities at any time deemed necessary; and shall promptly provide any required written reports, to ensure that authorized activities are being or have been accomplished in accordance with the terms and conditions of this permit.

Special Conditions:

(A) The permittee shall submit to this office the dates of commencement and completion of the herein authorized activities on the attached forms.

(B) The permittee shall undertake the authorized filling activities in a manner aimed at reducing impacts upon the general environment. In addition, the permittee shall not stockpile fill or other materials in a manner conducive to erosion, or in areas likely to cause high turbidity runoff during storm events. All exposed soils shall be re-vegetated in a timely manner to further reduce potential effects. The permittee shall also fence off all wetlands and other sensitive ecological areas during construction periods to prevent equipment and personnel from entering these areas.

(C) The permittee shall ensure that all synthetic erosion control features (e.g., silt fencing, netting, mats), which are intended for temporary use during construction, are completely removed and properly disposed of after their initial purpose has been served. Only natural fiber materials, which will degrade after time, may be used as permanent measures, or if used temporarily, may be abandoned in place.

(D) The permittee shall adhere to the requirements set forth in the attached Memorandum of Agreement among the U.S. Army Corps of Engineers, the New York State Historic Preservation Office, and WE 5S, LLC, executed on April 7, 2021, regarding the treatment of historic properties in the project area.

(E) The permittee shall accomplish compensatory mitigation through the purchase of 2.3 credits from The Wetland Trust Susquehanna Basin Headwaters and Adjacent Basins In-Lieu Fee Mitigation Program, Mohawk Service Area – HUC (02020004).

Further Information:

1. Congressional Authorities: You have been authorized to undertake the activity described above pursuant to:

( ) Section 10 of the Rivers and Harbors Act of 1899 (33 U.S. Code 403).
(X) Section 404 of the Clean Water Act (33 U.S. Code 1344).
( ) Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (33 U.S.C. 1413).

2. Limits of this authorization:

a. This permit does not obviate the need to obtain other Federal, state, or local authorizations required by law.
b. This permit does not grant any property rights or exclusive privileges.
c. This permit does not authorize any injury to the property or rights of others.
d. This permit does not authorize interference with any existing or proposed Federal project.

3. Limits of Federal Liability: in issuing this permit, the Federal Government does not assume any liability for the following:

a. Damages to the permitted project or uses thereof as a result of other permitted or unpermitted activities or from natural causes.
b. Damages to the permitted project or uses thereof as a result of current or future activities undertaken by or on behalf of the United States in the public interest.
c. Damages to persons, property, or to other permitted or unpermitted activities or structures caused by the activity authorized by this permit.
d. Design or construction deficiencies associated with the permitted work.
e. Damage claims associated with any future modification, suspension, or revocation of this permit.

4. Reliance on Applicant's Data: The determination of this office that issuance of this permit is not contrary to the public interest was made in reliance on the information you provided.

5. Reevaluation of Permit Decision: This office may reevaluate its decision on this permit at any time the circumstances warrant. Circumstances that could require a reevaluation include, but are not limited to, the following:

a. You fail to comply with the terms and conditions of this permit.

b. The information provided by you in support of your permit application proves to have been false, incomplete, or inaccurate (See 4 above).

c. Significant new information surfaces which this office did not consider in reaching the original public interest decision.

Such a reevaluation may result in a determination that it is appropriate to use the suspension, modification, and revocation procedures contained in 33 CFR 325.7 or enforcement procedures such as those contained in 33 CFR 326.4 and 326.5. The referenced enforcement procedures provide for the issuance of an administrative order requiring you to comply with the terms and conditions of your permit and for the initiation of legal action where appropriate. You will be required to pay for any corrective measures ordered by this office, and if you fail to comply with such directive, this office may in certain situations (such as those specified in 33 CFR 209.170) accomplish the corrective measures by contract or otherwise and bill you for the cost.

6. Extensions: General Condition 1 establishes a time limit for the completion of the activity authorized by this permit. Unless there are circumstances requiring either a prompt completion of the authorized activity or a reevaluation of the public interest decision, the Corps will normally give favorable consideration to a request for an extension of this time limit.

Your signature below, as permittee, indicates that you accept and agree to comply with the terms and conditions of this permit.

Adam D. Wistar — 1/6/22

(PERMITTEE) **(DATE)**
WE 5S, LLC

This permit becomes effective when the Federal official, designated to act for the Secretary of the Army, has signed below.

Stephen A Rybka — January 10, 2022

(DISTRICT ENGINEER) **(DATE)**
FOR AND ON BEHALF OF

Matthew W. Luzzatto

MEMORANDUM OF AGREEMENT AMONG THE UNITED STATES ARMY CORPS OF ENGINEERS, THE NEW YORK STATE HISTORIC PRESERVATION OFFICER, AND WE 5S, LLC REGARDING THE PROPOSED WAREHOUSE FACILITY, NYS ROUTE 5S, TOWN OF FLORIDA, MONTGOMERY COUNTY, NEW YORK

USACE PERMIT APPLICATION NUMBER NAN-2019-00679-USH

WHEREAS, the WE 5S, LLC proposes to construct a warehouse and distribution facility along NYS Route 5S in the Town of Florida, Montgomery County, New York ("the Project"); and

WHEREAS, pursuant to Section 404 of the Clean Water Act, 33 U.S.C. § 1344, USACE has been requested to issue a permit authorizing the discharge of fill material into approximately 1.90 acres of waters of the United States, including wetlands to facilitate construction of the Project; and

WHEREAS, the construction of 800,000 square foot warehouse and distribution facility with approximately 188 loading docks, 339 tractor trailer spaces, and parking spaces for 151 cars by the applicant is identified as the "Undertaking"; and

WHEREAS, USACE has defined the Permit Area for the Undertaking, as defined at 33 CFR Part 325, Appendix C, as described in Attachment 1; and

WHEREAS, USACE has determined that the Permit Area for the Undertaking is identical to the Area of Potential Effect; and

WHEREAS, USACE has determined that the undertaking will have an adverse effect on the J. Houck Historic Site (05704.000188), which is eligible for listing in the National Register of Historic Places; and

WHEREAS, USACE has consulted with the New York State Historic Preservation Officer ("SHPO") pursuant to Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108); Advisory Council of Historic Preservation (ACHP) implementing regulations at 36 CFR Part 800; USACE implementing regulations at 33 CFR Part 325, Appendix C, and subsequent interim guidance dated April 25, 2005 and January 31, 2007; and

WHEREAS, in accordance with 36 CFR § 800.6(a)(1), USACE has notified the Advisory Council on Historic Preservation (ACHP) of its adverse effects determination with specified documentation, and the ACHP has chosen not to participate in the consultation pursuant to 36 CFR § 800.6(a)(1)(iii); and

NOW, THEREFORE, USACE, SHPO, and WE 5S, LLC agree that the undertaking shall be implemented in accordance with the following stipulations in order to take into account the effect of the undertaking on historic properties.

STIPULATIONS

I. USACE Authorization. USACE shall ensure implementation of the terms of this MOA as a condition of the Permit.

II. WE 5S, LLC shall implement the Phase III Data Retrieval Plan (Attachment 2) and submit a report on the status of the implementation of same to the SHPO within twelve (12) months of the execution of this Agreement.

III. WE 5S, LLC shall submit to the USACE and the SHPO the Phase III Report as set forth in the Phase III Data Retrieval Plan, within eighteen (18) months of USACE issuance of authorization.

IV. WE 5S, LLC shall temporarily curate and protect all artifacts and other materials collected, including all notes, photographs, and other data generated during the performance of the Phase III data recovery, until all of these materials are accepted by a permanent curation facility in accordance with the Phase III Data Retrieval Plan.

V. In connection with the Phase III Data Retrieval Plan and artifacts obtained during the Phase III DRP excavations, WE 5S, LLC shall complete the permanent curation of the artifacts and shall convey the artifacts and other materials collected, within one (1) year after the date of SHPO and USACE approval of the Phase III Report to the New York State Museum or other facility approved by SHPO and USACE which will curate the artifacts and serve as the final repository.

VI. Within ten days of conveying the artifacts and the materials collected, WE 5S, LLC shall submit copies of the deed of gift, full copies of the artifact catalog and listing, and copies of a letter acknowledging receipt by the facility which will serve as the permanent curation facility, to SHPO and USACE.

VII. WE 5S, LLC shall complete dissemination of information to the public, as set forth in the Phase III Data Retrieval Plan, within six (6) months after the date of SHPO and USACE approval of the Phase III Report.

VIII. DURATION

This MOA will expire if its terms are not carried out within five (5) years from the date of its execution. Prior to such time, USACE may consult with the other signatories to reconsider the terms of the MOA and amend it in accordance with Stipulation XI.

IX. MONITORING AND REPORTING

Each year following the execution of this MOA until it expires or is terminated, WE 5S, LLC shall provide all parties to this MOA a summary report detailing work undertaken pursuant to its terms. Such report shall include any scheduling changes proposed, any problems encountered, and any disputes and objections received in USACE's efforts to carry out the terms of this MOA.

X. DISPUTE RESOLUTION

Should any signatory (either signatory or invited signatory) or concurring party to this MOA object at any time to any actions proposed or the manner in which the terms of this MOA are implemented, USACE shall consult with such party to resolve the objection. If USACE determines that such objection cannot be resolved, USACE will:

A. Forward all documentation relevant to the dispute, including USACE's proposed resolution, to the ACHP. The ACHP shall provide USACE with its advice on the resolution of the objection within thirty (30) days of receiving adequate documentation. Prior to reaching a final decision on the dispute, USACE shall prepare a written response that takes into account any timely advice or comments regarding the dispute from the ACHP, signatories and concurring parties, and provide them with a copy of this written response. USACE will then proceed according to its final decision.

B. If the ACHP does not provide its advice regarding the dispute within the thirty (30) day time period, USACE may make a final decision on the dispute and proceed accordingly. Prior to reaching such a final decision, USACE shall prepare a written response that takes into account any timely comments regarding the dispute from the signatories and concurring parties to the MOA, and provide them and the ACHP with a copy of such response.

C. USACE's responsibility to carry out all other actions subject to the terms of this MOA that are not the subject of the dispute remain unchanged.

XI. AMENDMENTS

This MOA may be amended when such an amendment is agreed to in writing by all signatories. The amendment will be effective on the date a copy signed by all the signatories is filed with the ACHP.

XII. TERMINATION

If any signatory to this MOA determines that its terms will not or cannot be carried out, that party shall immediately consult with the other signatories to attempt to develop an amendment per Stipulation XI, above. If within thirty (30) days (or another time period agreed to by all signatories) an amendment cannot be reached, any signatory may terminate the MOA upon written notification to the other signatories.

Once the MOA is terminated, and prior to work continuing on the Undertaking, USACE must either (a) execute an MOA pursuant to 36 CFR § 800.6 or (b) request, take into account, and respond to the comments of the ACHP under 36 CFR § 800.7. USACE shall notify the signatories as to the course of action it will pursue.

Execution of this MOA by USACE, SHPO, and WE 5S, LLC and implementation of its terms evidence that USACE has taken into account the effects of this undertaking on historic properties and afforded the ACHP an opportunity to comment.

Width: *195 feet (60 meters)*
Acres: *0.85 acres*

RECOMMENDATIONS

This document provides a proposed Data Retrieval Plan for the J. Houck Historic Site located on property being developed as part of the Winstanley Distribution Center project. The site consists of the remains of a single-residential structure and an associated well located along the original route of State Highway 5S, which is now runs to the north of the site. The remains of the residence consist of a stone foundation with cellar hole, a collapsed brick fireback associated with a stone hearth built into the stone foundation and what appears to be an "L" shaped addition along the east and south sides of the structure. Our data suggests that main portion of the residence was built between 1820 and 1853 when it is first shown on historic maps. The addition was built sometime after 1888 based on the date of a coin found just below the stone floor slabs. The well is stone lined and still contains water. Efforts to examine any contents were hampered by a post-occupational deposit of field cobbles filling up to a depth of about 5 feet below the ground surface. The property was owned by the locally important Houck family over several generations who used the site as a rental property. It was occupied by a series of tenants, many of whom worked as laborers for the Houck family.

PHASE III DATE RETRIEVAL PLAN

1 Introduction

Hartgen Archeological Associates, Inc. (Hartgen) proposes to conduct a Phase III Date Retrieval at the J. Houck Historic Site, which is located within the Area of Potential Effects (APE) for the proposed Winstanley Distribution Center project in the Town of Florida, Montgomery County, New York. The site was first identified during a Phase I Archeological Investigation (Hartgen Archeological Associates 2019a). Hartgen returned for a Phase II Site Evaluation (Hartgen Archeological Associates 2019b) to determine the site boundaries and concluded that the site was National Register eligible (NRE) meeting eligibility Criteria B "are associated with the lives of persons significant in our past" (in this case the locally important Houck family) and Criteria D has "yielded, or may be likely to yield, information important in prehistory or history." Due to the location of the site, avoidance is not feasible. So, we are proposing that a Phase III Date Retrieval be conducted.

These investigations were conducted to comply with Section 14.09 of the State Historic Preservation Act and will be reviewed by the New York State Office of Parks, Recreation and Historic Preservation (OPRHP). The investigation was conducted according to the New York Archaeological Council's *Standards for Cultural Resource Investigations and the Curation of Archaeological Collections* (1994), which are endorsed by OPRHP. This report has been prepared according to OPRHP's *State Historic Preservation Office (SHPO) Phase I Archaeological Report Format Requirements* (2005).

2 Project Information

2.1 Project Location

The Project is located between New York State Bicycle Route 5, the New York State Thruway (I-90), and Mead Road, in the Town of Florida, Montgomery County, New York (Map 1).

2.2 Description of the Area of Potential Effects (APE)

The area of potential effects (APE) for the proposed construction project includes all portions of the property that will be directly altered by the undertaking. The APE encompasses ~120 acres. The Phase III Project Area is a much smaller 0.85 acre portion of the overall APE encompassing the J. Houck Historic Site including remains of a 19th-century farmhouse, associated well and area shown (by Phase I/II shovel testing) to contain related archeological materials.

2.3 Historic Context

Historic maps indicate that development occurred throughout the region, beginning prior to 1850. Five early-to mid-19th-century archeological sites have been recorded within one mile of the current Project, two located within 500 feet [Farm Complex 2, Fossgate/Houck Farm (The Jacob and Christina Houck House) (05704.000121) and Farm Complex 1, DeForest/Pettengill/Lohmeyer Farm (05704.000120)]. Three other reported farm sites are located north of the Project. All of these farm houses are visible on the 1853 Geil Montgomery Co. map (Geil and Hunter 1853). The property under study was owned by Charles Williams in the years immediately following the Revolutionary War (DeWitt 1802, 1847 [1790]) and was referred to as "Warrensborough" (Sauthier 1779).

The National Register Eligible (NRE) Jacob and Christina Houck House (Hartgen Archeological Associates 2008a, b) was located at the intersection of Hirschfield Road and NY State Highway 5S. The earlier Fossgate designation has been dropped as later research has revealed that the association was an error. Hirschfeld Road, which was once located near the intersection of Broadway and NY Rt. 5S, across the street from the current Project, was removed sometime after 2003. It was replaced by "Nutritious Pl." and the distribution center

complex. The Beech-Nut Relocation Project was located just north of the current Project, on the opposite side of NY-Route 5S.

Maps indicate additional historic developments in the Phase I Project. Late 19th- to mid-20th-century maps, dating between 1895 and 1947, depict a historic road through the APE (Old Route 5S), which appears to follow the current V-shaped tree line containing the features under investigation. On late 19th to early 20th-century maps, two map-documented structures appear along this road (MDS 1 and 2). They were incorrectly labeled "J. Hawke", rather than Houck. Both are first visible on the 1853 map by Geil (Geil and Hunter 1853). It appears that MDS 1, which is located at the southern point of the angle in the highway, is the structure currently being investigated.

Surface survey has not located any structure in the location of MDS 2 as shown on the Geil map, nor have shovel tests produced remains in the vicinity. It is probable that the structure shown actually represents the Jacob and Christina Houck house, which is located farther east along the same roadway and is missing from its correct location on the map despite being a very prominent and well known structure (See Figure 5).

MDS 1 is depicted on maps through 1924 (Century Map Company 1905; Nichols 1868), after which it is absent. It is likely that the house had been demolished prior to 1924, as a series of topo maps from 1895 to 1924 look virtually identical and were apparently not updated. The next available 1931 map (the first to not depict the structure) shows a number of major differences and clearly represents new, updated mapping. However, it appears that the structure was definitely still present as of 1905 (Century Map Company 1905). MDS 2, The Jacob and Christina Houck house, continues to be shown our most recent maps (New York State Department of Transportation (NYSDOT) 1992). It was carefully dismantled in 2008 with plans to re-erect it in another location (Hartgen Archeological Associates 2008a, b). Topo maps indicate that Route 5S was reraligned to its current configuration by 1947 (present-day NYS Bicycle Route 5) (United States Geological Survey (USGS) 1947) and two houses were constructed on lots north of the former roadway. The Old Route 5S ran along the properties' southern boundaries, along or through what is currently a tree line.

Research on the Houck properties is somewhat complicated by the repeated use of certain family names generation after generation. The first Jacob Houck was born between 1770 and 1780 as was his wife Christina. Jacob had a brother by the name of Peter. Jacob and Christina had four children, Isaac, Jacob, Catherine and Christina. Isaac, who was born in 1803, went on to marry a woman who was also called Christina. He inherited his father's house and remained there until his death in 1850. The couple had two sons, Jacob and Peter. Jacob, who was born in 1833, went on to inherit the house and remained there until his death in 1905. This is the "J. Hawke/J. Houck" whose name is associated with the property in the available historic maps. He and his wife Adeline had no children of their own. But, they adopted Jennie Miller (later Houck), his brother Peter's daughter. A forth Jacob, Jacob TenEyck, also shows up in various records. He appears to be the son of Christina, widowed daughter of the original Jacob and Isaac's sister.

Table 1. Summarized Houck family genealogy

Generation	First name	Last name	Birth	Death	Relationship	Children	Residence
1	Jacob (1)	Houck	1770-1780	1839	Husband to Christina (married 1799)	Isaac, Jacob (2), Catherine (1) and Christine (2)	Jacob and Christina House
1	Christina (1)	Entis	1770-1780	1849	Wife of Jacob (1) (married 1799)	Isaac, Jacob (2) 2 daughters	Jacob and Christina House
1	Peter (1)	Houck			Brother of Jacob	?	
2	Isaac	Houck	1803	1850	Son of Jacob (1) and Christina	Jacob, Peter, Maria (?)	Jacob and Christina House (owner as of 1840)
2	Catherine (Katie)		1810-1813	1890	Wife of Isaac	Jacob, Peter, Maria (?)	
2	Jacob (2)	Houck			Son of Jacob (1) and Christina	?	

Generation	First name	Last name	Birth	Death	Relationship	Children	Residence
2	Catherine (1)				Daughters of Jacob (1)		
2	Christina (2)				Daughters of Jacob (1)		
3	Jacob (3)	Houck	1833	1905	Son of Isaac and Catherine/Grandson of Jacob (1)	Adopted Jennie Miller	Jacob and Christina House (owner from 1850-1905)
3	Adeline	Van Horn	1833	1903	Wife of Jacob (3)	Adopted Jennie Miller	
3	Peter (2)	Houck	1839		Son of Isaac and Catherine/Grandson of Jacob (1)	Jennie (Jane) Miller	
3	Jacob	TenEyck			Son of Catherine (1) (?)/Grandson of Jacob (1)		
3	Catherine (2)	TenEyck (?)			Daughter of Catherine		
3	Christina (3)	TenEyck (?)			Daughter of Catherine		
3	Elizabeth	TenEyck (?)			Daughter of Catherine		
4	Jennie (Jane)	Miller	1866		Daughter of Peter (2) adopted by Jacob (3)		

Hartgen conducted deed research to reconstruct the ownership history of the property under study. The first deed found for this property equaling ± 200 acres was between brothers Peter and Jacob Houck, grantees and John Watts, grantor in 1793. This property was described in the deed as follows:

> …as a part of a tract of land called Warrensborough and included within that tract therof which was heretofore sold and conveyed by Henry Gage & Susanna his wife & their trustees to the said party of the first part and is known in a map of the subdivision thereof made by John R. Bleecker Surveyor, in the year 1766, by Lot No. one hundred and forty seven…(Montgomery County Clerk 1793).

This area was referred to as Warrensborough in the eighteenth century (Sauthier 1779). Sometime between 1793 and 1839 Peter Houck granted his portion of this property to his brother Jacob Houck, although no deed has been found describing this transaction.

Jacob Houck married Christina Entis on January 27, 1799 according to a Dutch Reformed Church marriage record (Ancestry.com 2019a). Jacob died in 1839 granting this property to his eldest son, Isaac Houck. This transaction is described in great detail in his will executed on March 7, 1839. Also, in this will, Jacob Houck conveyed another piece of land to his two sons, Jacob and Isaac. The land was described as:

> A certain piece of land situated in Florida which has been for some years past in possession of James Greenman, Esq. containing about eighteen acres of Land, and bounded as follows, north by lands belonging to me, east by the George Servoss farm, south by the highway and west by James Greenmans land, the said Jacob and Isaac or the survivor of them shall whenever they shall deem it desired and proper to do to sell and convey the said land in fee simple, and out of the proceeds of said sale shall educate, support and maintain my grandson, Jacob A. TenEyck and if there be any surplus left pay the same to him when he arrives at the age of twenty one years. I give to my said grandson Jacob my silver watch, and it is my desire and I hereby request that my sons Jacob & Isaac shall take care of and provide of my said

> grandson until he shall arrive to an age when he shall be capable of taking care of himself. I do also order & direct that my son Isaac shall give my grandson Jacob a house when he arrives of age to be worth sixty or seventy dollars…(Ancestry.com 2019b).

This description fits the property under study perfectly when correlated with historic maps identifying the adjacent property owners. While the will specified that the sons can sell the land if wished, the fact that it remains identified as belonging to the Houck's into the 20th century indicates that they did not. It is unclear where the house that Jacob wanted constructed for his grandson Jacob TenEyck was located, or if it was even built. However, it does not appear to be the house being investigated. Indications are that it was built near the time of the property transfer. But, it is not clear if it was before or after. Jacob Ten Eyck does not appear in census records relating to the property.

Isaac Houck and his wife, Catherine had two sons, Jacob and Peter. After the death of Isaac in 1850, this property was transferred to Isaac's son, Jacob Houck, although no deed or will record could be located explaining this transaction (Montgomery County History and Archives n.d.). Given the range of possible dates for the house under study, Jacob may have built it when he received the property. Jacob Houck maintained the ownership of this property from 1850 until his death in 1905. Jacob and his wife, Adeline had no children of their own. But, they are known to have adopted Jennie (Jane) Miller. A will for Jacob Houck was found which was executed on September 8, 1905 (Ancestry.com 2019c). Interestingly, their adopted daughter is not listed as a beneficiary.

The following table lists the chain of ownership for the Project from before 1793 to 1905.

Table 2. Chai of ownership from 1793 to 1905 of the larger Houck property

Date	Rec'd Date	Grantee	Grantor	Book, Page		Acres	$	Notes
Unknown	Unknown	John Watts	Henry and Susanna Gage					This transaction is described in Deed 4: Liber 257 when John Watts sold the property to Peter and Jacob Houck
21 September 1793	17 October-1793	Peter and Jacob Houck	John Watts	4:257		±200	800 pounds	
7 March 1839	7 March 1839	Jacob Houck	Isaac Houck					By will
8 September 1905	8 September 1905	Jacob A. TenEyck, Anna C. Hills, Ira Mann, Sophia Van Vechten, Remelia Young, Chester Lerudrum, Catherine Diety	Jacob Houck					By will, John P. Miller was executor; Isaac Van Vechten was administrator of goods

Census records have been consulted to determine the individuals present in both the Jacob and Christina Houck house. In addition, they provide critical information on tenants that would have occupied the rental properties owned by the Houck family. The first population record for Jacob Houck was in 1810 when he was between 25 and 45 years of age. At this time, he was living in the Jacob and Christina Houck House, east of the J. Houck Historic site. He was listed in the population census as living with one woman of the same age, four children and two slaves (United States Census Bureau 1810). By 1820, the population census listed him as living with one woman, five children/young adults, two slaves (one adult male and one young adult female), and one free African American female under the age of fourteen (United States Census Bureau 1820).

This is the last census that shows the family owning any slaves. However, labor provided by African Americans remained important to the family's income. In 1830, Jacob Houck was between 50 and 60 years of age and

lived with one woman of the same age, two young adult men, one boy, one young adult female, one girl, and one free African American male between 10 and 23 years of age (United States Census Bureau 1830). According to cemetery records, Jacob Houck died in 1839 (Montgomery County History and Archives n.d.).

By 1840, the ownership of the Jacob and Christina Houck House was transferred to Jacob's son Isaac Houck. In the 1840 population census, Isaac Houck was listed as the head of the family between the age of 30 and 40. He lived with one female the same age, four boys, 1 young adult female, three girls, and one female between 50-60 years of age (United States Census Bureau 1840). Christina Houck, the wife of Jacob and the mother of Isaac died in 1847 according to cemetery records (Montgomery County History and Archives n.d.).

In 1850, Isaac Houck was recorded at age 47 and living with his wife, Catherine, age 37. They had two sons, Jacob and Peter. 64 year old Maria Houck was living with them in this year (United States Census Bureau 1850b). Perhaps Maria Houck was Jacob's sister, but no documentation was found to support that assumption. In this year, Isaac Houck's farm was valued at $10,000 and he farmed 170 acres of land. His main crops were oats, rye, and corn. He had 9 horses, 4 milk cows, 9 beef cattle, 2 oxen, 34 sheep and 9 pigs. His livestock was valued at $718 (United States Census Bureau 1850a).

According to cemetery records, Isaac Houck died in 1850 (Montgomery County History and Archives n.d.). His son, Jacob, acquired the property of the Houck estate and was listed as the head of the household in the 1860 population census at the age of 27, living with his wife, Adeline. His brother, Peter, and his mother, Catherine also resided with him. An African American 16-year old boy named James Dennis, most likely a farm laborer also was listed in the household.

After analysis of the 1860 population census record, it was determined that African American John Miller and his wife Jane were living in the house at the J. Houck Historic Site. It is believed that John Miller who was listed as a farm laborer in the population census living directly adjacent positioned west of the Jacob and Christina Houck House, was working for Jacob Houck and living in this house on the Houck estate (United States Census Bureau 1860b). According to the 1860 agricultural census, the amount of land farmed increased to 264 acres, and the value of the farm increased to $16,000. The main crops in this year were oats and corn. The value of livestock increased to $1,400 which included 5 8 horses, milk cows, 20 beef cattle, 4 oxen, 45 sheep, and 5 pigs. John Miller was not listed in the agricultural census of this year considering only landowners appear to be recorded at this time (United States Census Bureau 1860a).

By 1870, James Dennis no longer lived at the household, but Jennie (Jane) Miller, a four-year old girl lived with the family. It is believed that this child, Peter's daughter and later adopted daughter of Jacob, was a relation to John and Jane Miller who lived next door in 1860 (most likely the granddaughter of Jane Miller). John and Jane Miller were listed as living in a different area of the town of Florida according to the population census for that year. After an examination of the 1870 population records, it is thought that farmer, Loronzo Lisdell rented farm land from Jacob Houck as well as the house which stood at the J. Houck Historic Site. He was age 23 in 1870 and lived with his young wife, Anna and their daughter, Minnie. He is not recorded as owning any real estate in the population census, but having $100 for his personal estate. There is another young farmer who lived directly next door. Jay Burt, 25 years old, was also most likely renting farmland from Jacob Houck. It is probable that he lived in what is known as the Houck Tenant Farmhouse which was situated directly west of the Jacob and Christina Houck House.

Jay Burt lived with his young wife, Lydia and their 2-year old daughter, Amy (United States Census Bureau 1870b). Neither Loronzo Lisdell nor Jay Burt were listed in the 1870 agricultural census because they were not property owners. According to the agricultural census of this year, the Houck farm decreased in acreage down to 180 acres, but maintained the same value most likely because Houck was renting out approximately 85 acres of farmland. The main crop continued to be oats, with an increase in their wheat crop. The farm was still heavy with livestock maintaining 10 horses, 6 milk cows, 6 beef cattle, 2 working oxen, 23 sheep, 3 pigs, and 210 chickens (United States Census Bureau 1870a).

After the analysis of an 1875 state census record, it became clear that Jennie (Jane) Miller who was listed in the 1860 population census living with the Houck family was in fact Peter Houck's daughter (New York State

Census Bureau 1875), likely with a daughter of John and Jane Miller. She is listed in the records as Jacob's niece. She was eventually adopted by Jacob and Adeline who had no children of their own, changing her name to Houck and eventually being buried in the family cemetery. By 1880, Peter and Jennie did not live at the Jacob and Christina Houck House. In this year, Jacob Houck and his wife, Adeline continued to live in the main house with Jacob's mother, Catherine. They had a female servant from Prussia living with them and two male farm laborers. It is believed that the two male farm laborers were living in the tenant farmhouse. Living directly next door to Jacob Houck was farmer, Timothy Fero and his family. It is very possible that the Fero family lived in the house which used to stand at the J. Houck Historic Site. In 1880, Timothy Fero was listed at age 44 and his wife, Dorcas, who was recorded as aged 48. The couple had two teenage children (United States Census Bureau 1880b). According to the 1880 agricultural census, Timothy Fero was renting 85 acres of farmland in that year. It is believed that Fero was renting farmland from Jacob Houck while living at the J. Houck Historic Site. The 1880 federal census was the first year recorded if a farmer was the owner or renter.

Jacob Houck's farm increased in value between 1870 and 1880 by $6,000. His main crop was still oats, but did increase his buckwheat and corn crop. His wheat crop diminished from 200 bushels down to 18 bushels in that year. Houck had 6 horses, 5 milk cows, 7 beef cattle, 2 working oxen, 30 sheep, 5 pigs, and 120 chickens. Recorded immediately adjacent to Jacob Houck, was Timothy Fero in the 1880 agricultural census. Fero rented 86 acres of farmland from Houck in that year and his farm was valued at $9,000. His main crop was also oats, with his next largest crop being corn. He had 2 horses, 6 milk cows, 9 beef cattle, and 12 chickens. There are no later agricultural censuses available after 1880 (United States Census Bureau 1880a).

According to the 1892 state census, Jacob Houck and his wife Adeline were both 60 years old in that year, and his mother Catherine was 81. They had a seventeen year old female servant living with them, and an eighteen-year old male laborer possibly living at the tenant farmhouse. It is believed that African American Benjamin Havens and his wife Grace Havens lived at the house at the J. Houck Historic site in this year. The state census does not distinguish between households as the federal census does, so it is unclear if they lived in a separate house from the Houck family (New York State Census Bureau 1892).

Catherine Houck died in 1898 reported by the New York State Death Index (Ancestry.com 2019d). In 1900, Jacob and Adeline Houck continued to occupy the Jacob and Christina Houck House. Living with them in this year was a young female servant and a young male farm laborer. Recorded living next door in the population census was John and Kate Miller. John Miller was listed as a 32-year old farm laborer who rented out the house which he occupied. It is supposed that he and his wife were living in the Houck Tenant Farmhouse at this time. William Sanders and his family was recorded living next to the Miller's. William Sanders was documented as a 40-year old farmer who rented out a house. Living with him was his wife, Amelia and their four sons. It is believed that the Sander family was renting out the house which used to be situated at the J. Houck Historic Site.

According to cemetery records, Adeline Houck, wife of Jacob Houck died in 1903 at the age of 70 and Jacob Houck died in 1905 at the age of 72 (Montgomery County History and Archives n.d.).

After the analysis of historical maps, it has been determined that the house which used to be situated at the J. Houck Historic site was demolished between 1905 and 1931, probably closer to the earlier date (Century Map Company 1905; USGS 1931).

The following table summarizes the known (or suspected) identities of the tenants renting either the Houck Tenant Farmhouse adjacent to the main house or the J. Houck Historic Site home that is the focus of this study between 1860 and 1900. Due to the timing of censuses, it is likely that additional renters were present in the two properties which were not recorded.

Table 3. Summary of occupation of the J. Houck Historic Site home site.

First Name	Last Name	Residence	Age	Census year	Occupation	Note
John	Miller	J. Houck Historic Site	45	1860	Farm laborer	African American
Jane	Miller	J. Houck Historic Site	45	1860		African American
Loronzo	Lisdell	J. Houck Historic Site	23	1870	Farmer	
Anna	Lisdell	J. Houck Historic Site	19	1870	Keeping house	
Minnie	Lisdell	J. Houck Historic Site	2	1870		
Jay	Burt	Houck Tenant Farmhouse	25	1870	Farmer	
Lydia	Loranzo	Houck Tenant Farmhouse	19	1870	Keeping house	
Amy	Burt	Houck Tenant Farmhouse	2	1870		
Benjamin	Haven	Houck Tennant Farmhouse	27	1880	Laborer	Presumably the same as the Benjamin "Havens" identified as an African American laborer in the 1892 census
John	Bickford	Houck Tenant Farmhouse	18	1880	Laborer	
Timothy	Fero	J. Houck Historic Site	44	1880	Farmer	
Dorcas	Fero	J. Houck Historic Site	48	1880	Keeping house	
Frank	Fero	J. Houck Historic Site	14	1880	At home	
Josephine	Fero	J. Houck Historic Site	12	1880	At home	
James	Dence	Houck Tennant Farmhouse	19	1892	Laborer	
Benjamin	Havens	J. Houck Historic Site	41	1892	Laborer	African American
Grace	Havens	J. Houck Historic Site	31	1892	Dress maker	African American
John	Miller	Houck Tenant Farmhouse	32	1900	Farm laborer	
Kate	Miller	Houck Tennant Farmhouse	30	1900		
William	Sanders	J. Houck Historic Site	40	1900	Farmer	
Amelia	Sanders	J. Houck Historic Site	39	1900		
Howard	Sanders	J. Houck Historic Site	14	1900	Farm Laborer	
Seymore	Sanders	J. Houck Historic Site	12	1900	At school	
Morris	Sanders	J. Houck Historic Site	9	1900	At school	
Erving	Sanders	J. Houck Historic Site	2	1900		

2.4 Previous Archeological Study

The J. Houck Historic Site was initially identified during Hartgen's Phase I Archeological Investigation of a 140 acre parcel of land that will be developed as part of the Winstanley Distribution Center project (Hartgen Archeological Associates 2019a). During the Phase IB shovel testing, a total of 1014 tests were excavated at 15 meter (50 foot) intervals. Seven of those tests were positive for historic artifacts. Six of the positives were located in close proximity to a cut stone foundation and well also recorded during the study. The location matched the position of the J. Houck property first identified during the Phase IA study.

These findings resulted in a Phase II Site Evaluation intended to establish the site boundaries and determine National Register eligibility (Hartgen Archeological Associates 2019b). A total of 64 additional shovel tests were excavated during Phase II. Fifty-eight of those were placed at 8 meter (26 foot) intervals surrounding the foundation, well and previous positive tests. Six tests at 2 meter intervals were excavated in a line extending north from the centerline of the stone foundations in hopes of locating a privy or other structure associated with the foundations. A privy was not identified. But, the testing allowed us to establish site boundaries. In addition nine units were excavated revealing a total of 8.5 m^2. Those tests revealed significant data used to establish the dating of the structure and refine our understanding of the architecture present. An effort was also made to core the sediment at the bottom of the well to determine if any artifacts were present. However, discarded field cobbles blocked access to the lower levels.

Table 4. Summary of Phase II field investigations

Field method	Qty/Area	Rationale	Results
Shovel tests	64 tests	Conducted to determine the site boundaries and chronology	Site boundaries were established based in drop-off of archeological materials. TPQ dates had large range from 1780 to 1920 suggesting long term use of the site before and after residence was present.
Units	9/8.5 m^2	Conducted to investigate structure form, function and chronology	Some ambiguity remains about the form of the structure. Excavations suggested the visible foundation and cellar hole were the original structure dating between 1820 and 1853 when it appears on the Geil map. Stone walls and floor slabs suggest that the structure had at least one addition wrapping around the east and south sides added sometime after 1888.

3 Research Questions

The J. Houck Historic Site has the potential to answer a wide range of research questions. These include the following:

- Phase II investigations suggested that the residential structure was expanded decades after the initial construction of the stone foundations and cellar. Can a more detailed construction history and chronology of the residential structure and its possible additions be reconstructed? Are any activity areas evident from the remains of the structure?

- Unit 1 from our Phase II study was terminated after it filled with ground water and did not reach the floor of the cellar. Can the floor be exposed and activity areas defined with the water table lowered through the excavation of a sump?

- Previous work did not reveal the location of a privy, a common feature of 19th-century houses which often provides significant preserved remains that can shed light on a variety of issues. Can a privy or other important features, such as middens, be located?

- If so, can study of the night soils give us data on the health and diet of the home's residents? Can their remains help us reconstruct the socioeconomic status and or ethnicity of the households occupying the site?

- Initial examination of the existing well feature suggests that it has been blocked with deposited field cobbles following abandonment of the residence. Does the well contain archeological remains below the field cobbles which could help us reconstruct life in this rural farmstead?

- Are there remains of the second structure (likely a barn) shown on the 1905 Century map? If so, is there evidence of its function remaining in the archeological record?

- Historical research on the property suggest that it was a rental home occupied by a series of tenant farmers, most working for the Houck family, who owned the residence and surrounding farmland. Previous research at the Jacob and Christina Houck House (Hartgen Archeological Associates 2003, 2008a) provided us information on their lifeways. How do the lives of tenants renting this property differ from those of their Houck Family landlords?

- Historical research revealed that several of these tenant farmers were African Americans living in the decades immediately following manumission of enslaved individuals in New York state. The Houck family is shown to have owned slaves as of the 1820 census (United States Census Bureau 1820). However, they continued to rely on labor provided by free African Americans long after that date. Can we recover information that would illuminate how ethnicity, social class and socioeconomic status were expressed and interrelated in rural New York communities during the 19th century? Can that data help us understand how African American laborers and former slave owners transitioned from enslaved labor to freedom?

It is not guaranteed that this research will provide answers to all of these questions nor will we restrict our investigations to just these questions if others can be answered by the remains discovered during the Data Recovery.

4 Data Collection Methods

To address the above research questions, Hartgen will conduct the following data retrieval excavations:

Method	Quantity	Approach/Rationale
Unit Excavation	8 square meters	• Investigate activities within the cellar hole • Investigate layout of structure and addition. • Investigate deposits around the well. • Sample middens and other artifact bearing deposits.
Mechanical Trenching	Approximately 10 meters	• Expose well in profile to locate any artifact bearing deposits. • Expose stratigraphy within cellar hole, stripping away cobbles and post-abandonment deposits.
Mechanical Stripping	Up to 500 square meters	• Locate privy, middens, trash pits, outbuildings or other features and to expose foundations and cellars.
Feature Excavation	Up to 3 subsurface features (not including foundations)	• Map and photograph all features. • Collect soil samples as warranted.

4.1 Unit Excavation

Units will be rectangular with dimensions of one-by-one or one-by-two meters (3.3 by 3.3. or 3.3 by 6.6 m). Soil levels will be excavated separately, and all excavated soil passed through 0.25-inch hardware mesh and examined for historic artifacts. Soil depths, Munsell colors, textures, artifact content, and other relevant observations were recorded (Munsell Color 2000). Profiles and plan views will be drawn when appropriate. The location of each unit will be mapped with a Trimble Geo7X GPS unit and plotted on the project map. Unit

excavation fieldwork and unit wall stratigraphy will be photographed. Unit excavation and mechanical trenching will be aided through the digging of a sump to lower the current water table.

4.2 Mechanical Trenching

Backhoe trench excavation will be directed by the archeological crew. Trenches will be excavated stratigraphically and soils were piled next to each trench and investigated for artifacts. Selected soils will be screened through 0.25-inch hardware mesh and examined for historic artifacts. Trench walls will be cleaned and examined for artifacts in trenches that were less than four feet deep, and the walls will be profiled and photographed. Trenches greater than four feet deep will be documented from the surface. If artifact bearing deposits are found at the base of the well, the area will be sloped to allow safe access for hand excavation. Trench locations will be mapped with a Trimble Geo7X GPS unit and plotted on the project map.

4.3 Mechanical Stripping

Mechanical excavation equipment with a toothless bucket will be used to removal the plowzone in selected areas as well as more fully expose foundations and cellar holes. An archeologist will direct the excavator to carefully remove the overlying stratum and expose the boundary with in situ subsoil. Archeologists will then hand scrape the uppermost portion of the subsoil stratum while inspecting for the presence of archeological features. The depth of mechanical soil removal will be about 1 foot in the rear of the house, and several feet within the foundation. The limits of the stripped area will be mapped with a Trimble GPS unit and plotted on the project map.

4.4 Feature Excavation

Features encountered during the unit excavations and mechanical stripping will be bisected, recorded, and excavated by stratigraphic levels. All artifacts will be collected. Samples of feature soils and charcoal will be collected. Profiles and plan view will be drawn when appropriate. The location of each feature will be mapped with a Trimble GPS unit and plotted on the project map. Feature excavations will be photographed.

4.5 General Documentation of the Excavations

Documentation of the excavations will include digital photography. General views of the site and the various phases of the investigation including all of the excavations will be recorded for inclusion in the final report.

The fieldwork will be followed by documentation of the excavations, laboratory analysis, curation of the archeological assemblage obtained during the fieldwork, comparative studies with artifact assemblages from other 19th-century historic sites, and report preparation. As part of compliance and in consultation with SHPO staff, other products such as a public information plan, may also be undertaken.

4.6 Treatment of Human Remains

In the event that human remains are identified during the data retrieval excavations, the archeologists will stop work in the vicinity of the find and immediately notify Winstanley Construction Management, LLC. Hartgen will ensure that the appropriate measures are taken in the treatment of the human remains and artifacts associated with the grave. The SHPO human remains protocol is attached

5 Laboratory and Analytical Techniques

5.1 Artifacts and Laboratory

As general procedure, significant historic artifacts such as glass, ceramics, food remains, hardware, and miscellaneous items will be collected. Coal, ash, cinder, brick, and modern materials will be noted. Artifacts collected will be placed in paper or plastic bags labeled by provenience and inventoried in a bag list. Artifacts

will be cleaned and cataloged in a database or spreadsheet, such as Microsoft Access or Excel. A copy of the complete catalog will be included in the report.

5.2 Specialized Analyses

The data recovery effort will include the use of analytical techniques selected based the potential to produce unique information. The techniques and the quantity of samples selected for each technique will depend on the types of artifacts and deposits recovered during the fieldwork. Examples of the types of analyses that may be conducted are listed below:

- Floral and pollen analysis to identify species present.
- Faunal analysis to identify species, cut, minimum number of individuals, and butchering methods.
- Parasite analysis to identify parasitic infections carried by the site occupants, which can shed light on the nutrition, disease, living conditions and overall health of the individuals.
- Trace element analysis of privy deposits which can shed light on the types of medications that were in use.
- DNA analysis of residue from pipe stems or other potential sources for information on ethnicity.

Samples will be collected from temporally discrete deposits with the potential to contain dietary remnants. Standard techniques will be followed for collecting samples to assure they are not contaminated by soil from strata above or below.

The following estimates serve to demonstrate the level of effort that will be devoted to analytical techniques; the actual techniques employed and the quantity of samples analyzed may differ.

- Floral analysis: 1 sample
- Pollen analysis: 1 sample
- Faunal analysis: 100 specimens

5.3 Curation

The cultural material assemblage from the data recovery study will make an important contribution to the study of New York history. As such, the collection should be placed in a suitable repository where it will be available for archeologists and other scholars to use in comparative analyses and studies. The New York State Museum (NYSM) is considered a suitable final repository for the collection. If the NYSM does not accept the collection, Hartgen will work with SHPO to find a viable alternative repository.

6 Deliverables

6.1 End of Fieldwork Letter

Following completion of the Phase III data retrieval fieldwork, Hartgen will prepare an end-of-field work letter demonstrating that the fieldwork component of this DRP has been completed and summarizing preliminary results of the study. This document will be submitted to SHPO with the recommendation that construction be permitted to proceed within the site area while the Phase III report is prepared.

6.2 Report

Hartgen will author the Phase III report in accordance with this DRP, OPRHP's *State Historic Preservation Office (SHPO) Phase I Archaeological Report Format Requirements* (2005) and the New York Archaeological Council's *Standards for Cultural Resource Investigations and the Curation of Archaeological Collections* (1994). As appropriate, the report will contain text, tables, color maps and photographs, scale drawings, and an artifact inventory. Hartgen will provide a PDF version of the draft report for the client's review. The client will compile and submit all comments to Hartgen in a single submission. Hartgen will address one round of comments, making revisions

to the report as appropriate. Hartgen will issue a PDF copy of the final report. A copy of the final report will be uploaded to OPRHP via CRIS.

6.3 Public Information Plan

Hartgen will take the following steps to disseminate the results of the Phase III data retrieval study to the public:

- Distribute full-color hard copies and electronic copies of the final Phase III report to the Montgomery County Historical Society and one local library to ensure long-term accessibility of the information to the local community.
- Create a J. Houck Historic Site archeology resource in the Digital Archaeological Record (tDAR), an international digital repository for the digital records of archaeological investigations. tDAR's use, development, and maintenance are governed by Digital Antiquity, an organization dedicated to ensuring the long-term preservation of irreplaceable archaeological data and to broadening the access to these data.

Appendix 1: Protocol for the Unanticipated Discovery of Human Remains

State Historic Preservation Office/
New York State Office of Parks, Recreation and Historic Preservation
Human Remains Discovery Protocol
(August 2018)

If human remains are encountered during construction or archaeological investigations, the New York State Historic Preservation Office (SHPO) recommends that the following protocol is implemented:

- Human remains must be treated with dignity and respect at all times. Should human remains or suspected human remains be encountered, work in the general area of the discovery will stop immediately and the location will be secured and protected from damage and disturbance.

- If skeletal remains are identified and the archaeologist is not able to conclusively determine whether they are human, the remains and any associated materials must be left in place. A qualified forensic anthropologist, bioarchaeologist or physical anthropologist will assess the remains in situ to help determine if they are human.

- No skeletal remains or associated materials will be collected or removed until appropriate consultation has taken place and a plan of action has been developed.

- The SHPO, the appropriate Indian Nations, the involved state and federal agencies, the coroner, and local law enforcement will be notified immediately. Requirements of the corner and local law enforcement will be adhered to. A qualified forensic anthropologist, bioarchaeologist or physical anthropologist will assess the remains in situ to help determine if the remains are Native American or non-Native American.

- If human remains are determined to be Native American, they will be left in place and protected from further disturbance until a plan for their avoidance or removal can be generated. Please note that avoidance is the preferred option of the SHPO and the Indian Nations. The involved agency will consult SHPO and the appropriate Indian Nations to develop a plan of action that is consistent with the Native American Graves Protection and Repatriation Act (NAGPRA) guidance. Photographs of Native American human remains and associated funerary objects should not be taken without consulting with the involved Indian Nations.

- If human remains are determined to be non-Native American, the remains will be left in place and protected from further disturbance until a plan for their avoidance or removal can be generated. Please note that avoidance is the preferred option of the SHPO. Consultation with the SHPO and other appropriate parties will be required to determine a plan of action.

- To protect human remains from possible damage, the SHPO recommends that burial information not be released to the public.

Subject: Notification of CWA Section 401 WQC Waiver for USACE Application Number NAN-2019-00679-USH

Good Morning,

In accordance with the U.S. Environmental Protection Agency's (EPA's) current water quality certification regulations at 40 CFR Part 121, the New York District, U.S. Army Corps of Engineers has determined that the Individual 401 Water Quality Certification (WQC) that was required to be obtained from the New York State Department of Environmental Conservation (NYSDEC) for the subject project is waived in accordance with the regulations at 40 CFR 121.9(a)(2)(i). The waiver has occurred as the NYSDEC did not make the WQC decision within a reasonable period of time, which was 360 days (1 year) from the date they received a valid request for a WQC.

This project involves the discharge of fill material into waters of the United States to facilitate the construction of a warehouse and distribution facility, and is located along NYS 5S, in the Town of Florida, Montgomery, New York. The USACE is reviewing this work under an Individual Permit, under USACE Application Number NAN-2019-00679-USH. The need for the CWA Section 401 WQC was triggered by the proposed activities under USACE jurisdiction pursuant to Section 404 of the Clean Water Act.

The USACE draft permit and decision documents are being reviewed, and a decision on this project will be made soon. Please feel free to contact me with any questions concerning this notification.

Thanks,
Brad

Subject: 401 Request Reasonable Period of Time for WE 5S, LLC (Interchange 27 Warehouse)

Good afternoon,

In accordance with Clean Water Act (CWA) Section 401 Certification Rule, the Federal agency (the Corps) shall provide, in writing, the following information to the certifying authority (NYSDEC):

1. The date of receipt of 401 Request: 11/19/2019

2. The applicable reasonable period of time to act on the certification: 360 days (1 year)

3. The date upon which waiver will occur if the certifying authority fails or refuses to act on the certification request: November 19, 2020 (reasonable period of time has elapsed)

Let me know if you have any questions and/or concerns.

Thanks,

Brad

GENERAL NOTES

(Rev. 1/2023)

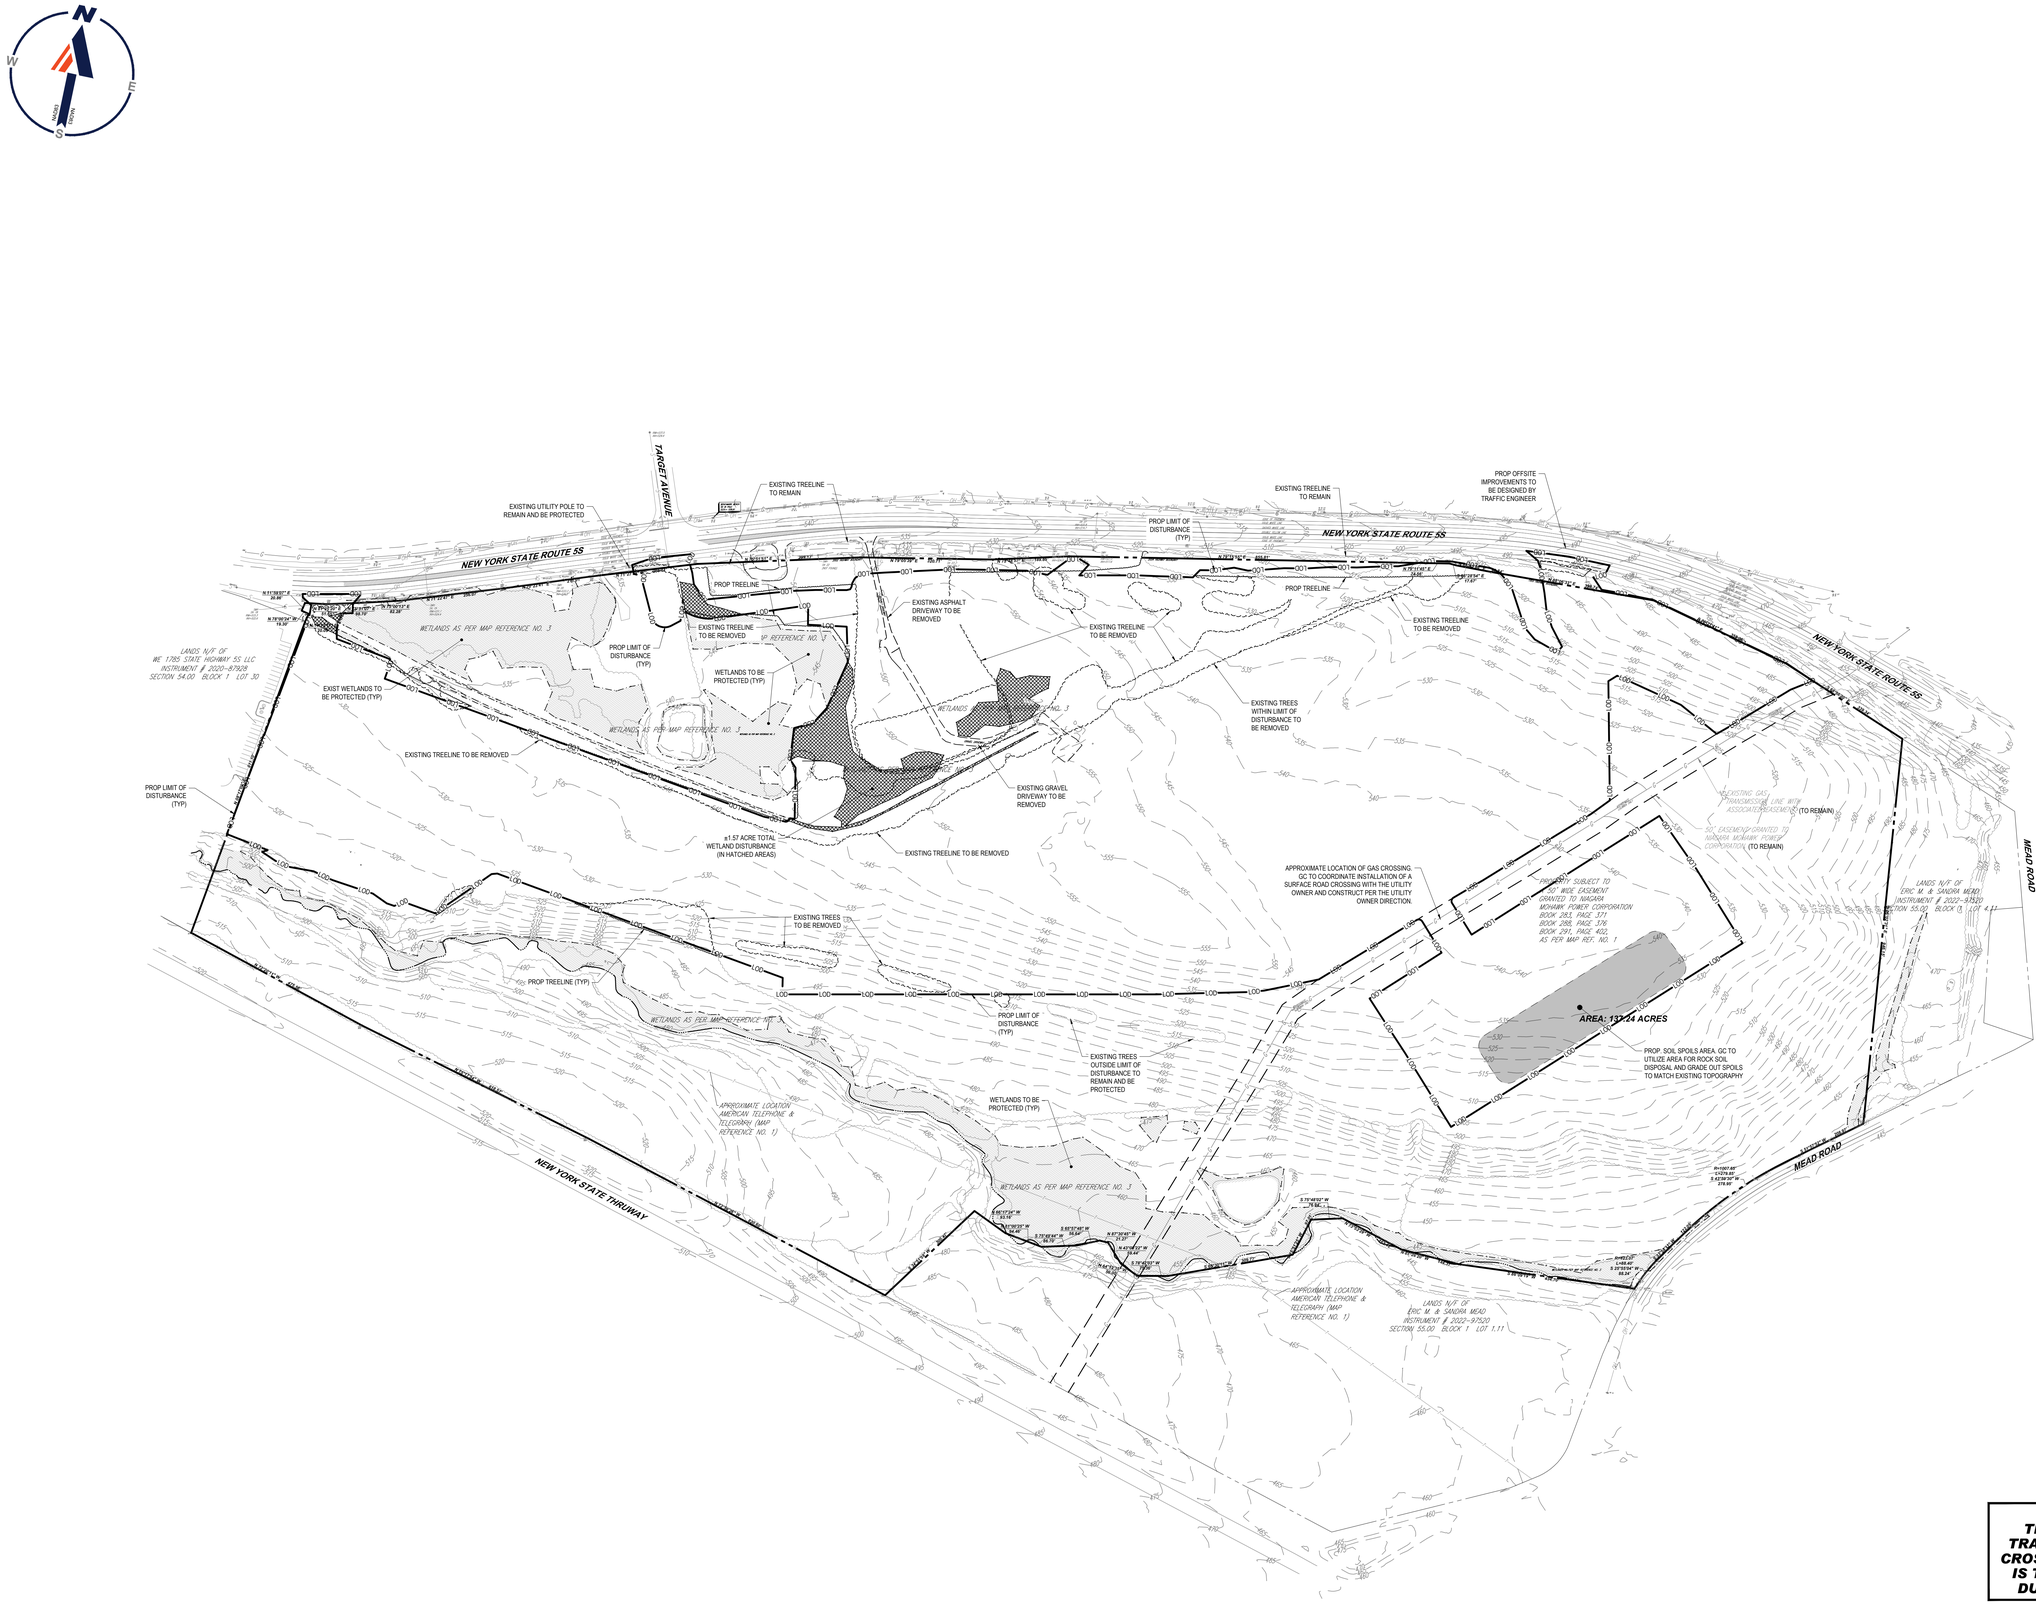
1. THESE PLANS ARE SOLELY BASED ON INFORMATION THE OWNER AND OTHERS PROVIDED TO BOHLER PLANNING, LANDSCAPE ARCHITECTURE, ENGINEERING AND SURVEYING NY, PLLC (HEREIN "BOHLER") PRIOR TO THE TIME ON WHICH THE PROFESSIONAL OF RECORD AND BOHLER PREPARED THESE PLANS. THE CONTRACTOR MUST FIELD VERIFY ALL EXISTING CONDITIONS AND IMMEDIATELY NOTIFY BOHLER , IN WRITING, IF ANY ACTUAL SITE CONDITIONS DIFFER FROM THOSE SHOWN ON THESE PLANS, OR IF THE PROPOSED WORK CONFLICTS WITH ANY OTHER SITE FEATURES.
2. THE CONTRACTOR MUST STRICTLY COMPLY WITH THESE NOTES AND ALL SPECIFICATIONS/REPORTS CONTAINED HEREIN. THE CONTRACTOR MUST ENSURE THAT ALL SUBCONTRACTORS FULLY AND COMPLETELY CONFORM TO AND COMPLY WITH THESE REQUIREMENTS, THESE NOTES, AND THE REQUIREMENTS ARTICULATED IN THE NOTES CONTAINED IN ALL THE OTHER DRAWINGS THAT COMPRISE THE PLAN SET OF DRAWINGS. ADDITIONAL NOTES AND SPECIFIC PLAN NOTES MAY BE FOUND ON THE INDIVIDUAL PLANS. THESE GENERAL NOTES APPLY TO THIS ENTIRE DOCUMENT PACKAGE. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW ALL CONSTRUCTION CONTRACT DOCUMENTS INCLUDING, BUT NOT LIMITED TO, ALL OF THE DRAWINGS AND SPECIFICATIONS ASSOCIATED WITH THE PROJECT WORK SCOPE, PRIOR TO THE INITIATION AND COMMENCEMENT OF CONSTRUCTION.
3. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, THE CONTRACTOR MUST CONFIRM WITH THE PROFESSIONAL OF RECORD AND BOHLER THAT THE LATEST EDITION OF THE DOCUMENTS AND/OR REPORTS REFERENCED WITHIN THE PLAN REFERENCES ARE BEING USED FOR CONSTRUCTION. THIS IS THE CONTRACTOR'S SOLE AND COMPLETE RESPONSIBILITY.
4. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, THE CONTRACTOR MUST ENSURE THAT ALL REQUIRED PERMITS AND APPROVALS HAVE BEEN OBTAINED. NO CONSTRUCTION OR FABRICATION IS TO BEGIN UNTIL THE CONTRACTOR HAS RECEIVED COPIES OF ALL PERMITS AND APPROVALS, REVIEWED THE CONDITIONS OF APPROVAL TO ALL PLANS AND OTHER DOCUMENTS REVIEWED AND APPROVED BY THE PERMITTING AUTHORITIES AND HAS ALSO CONFIRMED THAT ALL NECESSARY AND REQUIRED PERMITS HAVE BEEN OBTAINED. THE CONTRACTOR MUST HAVE COPIES OF ALL PERMITS AND APPROVALS ON SITE AT ALL TIMES.
5. THE CONTRACTOR MUST ENSURE THAT ALL WORK IS PERFORMED IN ACCORDANCE WITH THESE PLANS, SPECIFICATIONS/REPORTS AND CONDITIONS OF APPROVAL, AND ALL APPLICABLE REQUIREMENTS, RULES, REGULATIONS, STATUTORY REQUIREMENTS, CODES, LAWS AND STANDARDS OF ALL GOVERNMENTAL ENTITIES WITH JURISDICTION OVER THIS PROJECT, AND ALL PROVISIONS IN AND CONDITIONS OF THE CONSTRUCTION CONTRACT WITH THE OWNER/DEVELOPER INCLUDING ALL EXHIBITS, ATTACHMENTS AND ADDENDA TO SAME.
6. PRIOR TO THE COMMENCEMENT OF CONSTRUCTION, THE CONTRACTOR MUST COORDINATE THE BUILDING LAYOUT SHOWN AND CAREFULLY REVIEWING THE MOST CURRENT ARCHITECTURAL, CIVIL AND STRUCTURAL CONSTRUCTION DOCUMENTS (INCLUDING, BUT NOT LIMITED TO, MECHANICAL, ELECTRICAL, PLUMBING AND FIRE SUPPRESSION PLANS, WHERE APPLICABLE). THE CONTRACTOR MUST IMMEDIATELY NOTIFY THE OWNER, ARCHITECT AND PROFESSIONAL OF RECORD AND BOHLER, IN WRITING, OF ANY CONFLICTS, DISCREPANCIES OR AMBIGUITIES WHICH EXIST BETWEEN THESE PLANS AND ANY OTHER PLANS THAT COMPRISE THE CONSTRUCTION DOCUMENTS.
7. CONTRACTOR MUST REFER TO AND ENSURE COMPLIANCE WITH THE APPROVED ARCHITECTURAL/BUILDING PLANS OF RECORD FOR EXACT LOCATIONS AND DIMENSIONS OF ENTRY/EXIT POINTS, ELEVATIONS, PRECISE BUILDING DIMENSIONS, AND EXACT BUILDING UTILITY LOCATIONS.
8. THE CONTRACTOR MUST FIELD VERIFY ALL DIMENSIONS AND MEASUREMENTS SHOWN ON THESE PLANS, PRIOR TO THE COMMENCEMENT OF CONSTRUCTION. THE CONTRACTOR MUST IMMEDIATELY NOTIFY PROFESSIONAL OF RECORD AND BOHLER, IN WRITING, IF ANY CONFLICTS, DISCREPANCIES, OR AMBIGUITIES EXIST PRIOR TO PROCEEDING WITH CONSTRUCTION. NO EXTRA COMPENSATION WILL BE PAID TO THE CONTRACTOR FOR WORK WHICH HAS TO BE RE-DONE OR REPAIRED DUE TO DIMENSIONS, MEASUREMENTS OR SURVEY DATA SHOWN INCORRECTLY ON THESE PLANS PRIOR TO BOTH (A) THE CONTRACTOR GIVING PROFESSIONAL OF RECORD AND BOHLER WRITTEN NOTIFICATION OF SAME AND (B) PROFESSIONAL OF RECORD AND BOHLER, THEREAFTER, PROVIDING THE CONTRACTOR WITH WRITTEN AUTHORIZATION TO PROCEED WITH SUCH ADDITIONAL WORK.
9. THE CONTRACTOR MUST VERIFY ALL DIMENSIONS AND MEASUREMENTS INCLUDED ON DRAWING DOCUMENTS HEREIN AND MUST NOT SCALE OFF THE DRAWINGS DUE TO POTENTIAL PRINTING INACCURACIES. ALL DIMENSIONS AND MEASUREMENTS ARE TO BE CHECKED AND CONFIRMED BY THE GENERAL CONTRACTOR PRIOR TO PREPARATION OF SHOP DRAWINGS, FABRICATION/ORDERING OF PARTS AND MATERIALS AND COMMENCEMENT OF SITE WORK. SITE PLAN DRAWINGS ARE NOT INTENDED AS SURVEY DOCUMENTS. DIMENSIONS SUPERSEDE GRAPHICAL REPRESENTATIONS. THE CONTRACTOR MUST MAKE CONTRACTOR'S OWN MEASUREMENTS FOR LAYOUT OF IMPROVEMENTS.
10. THE OWNER AND CONTRACTOR MUST BE FAMILIAR WITH AND RESPONSIBLE FOR THE PROCUREMENT OF ANY AND ALL CERTIFICATIONS REQUIRED FOR THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY.
11. WHEN INCLUDED AS ONE OF THE REFERENCED DOCUMENTS, THE GEOTECHNICAL REPORT, SPECIFICATIONS AND RECOMMENDATIONS SET FORTH THEREIN ARE A PART OF THE REQUIRED CONSTRUCTION DOCUMENTS AND, IN CASE OF CONFLICT, DISCREPANCY OR AMBIGUITY, THE MORE STRINGENT REQUIREMENTS AND/OR RECOMMENDATIONS SHALL BE FOLLOWED. (A) THE PLANS AND (B) THE GEOTECHNICAL REPORT AND RECOMMENDATIONS, MUST TAKE PRECEDENCE UNLESS SPECIFICALLY NOTED OTHERWISE ON THE PLANS. THE CONTRACTOR MUST NOTIFY THE PROFESSIONAL OF RECORD AND BOHLER, IN WRITING, OF ANY SUCH CONFLICT, DISCREPANCY OR AMBIGUITY BETWEEN THE GEOTECHNICAL REPORT AND PLANS AND SPECIFICATIONS, PRIOR TO PROCEEDING WITH ANY FURTHER WORK IF A GEOTECHNICAL REPORT WAS NOT CREATED, THEN THE CONTRACTOR MUST STRICTLY COMPLY WITH ALL THE REQUIREMENTS OF ANY AND ALL MUNICIPAL, COUNTY, STATE, AND FEDERAL LAWS AND APPLICABLE SPECIFICATIONS WHICH HAVE JURISDICTION OVER THIS PROJECT.
12. PROFESSIONAL OF RECORD AND BOHLER ARE NEITHER LIABLE NOR RESPONSIBLE FOR ANY SUBSURFACE CONDITIONS AND FURTHER, HAS NO LIABILITY FOR ANY HAZARDOUS MATERIALS, HAZARDOUS SUBSTANCES, OR POLLUTANTS ON, ABOUT OR UNDER THE PROPERTY.
13. THE CONTRACTOR IS RESPONSIBLE FOR DEFINING WHEN AND WHERE SHOP DRAWINGS, PRODUCT DATA, SAMPLES, AND OTHER DATA WHICH THE CONTRACTOR IS REQUIRED TO SUBMIT, BUT ONLY FOR THE LIMITED PURPOSE OF EVALUATING CONFORMANCE WITH THE DESIGN INTENT AND THE INFORMATION SHOWN IN THE CONSTRUCTION CONTRACT DOCUMENTS. CONSTRUCTION MEANS AND METHODS, AND/OR TECHNIQUES OR PROCEDURES, COORDINATION OF THE WORK WITH OTHER TRADES, AND CONSTRUCTION SAFETY PRECAUTIONS ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR AND BOHLER HAS NO RESPONSIBILITY OR LIABILITY FOR SAME. BOHLER'S REVIEW OF CONTRACTOR'S SHOP DRAWING REVIEW WITH REASONABLE PROMPTNESS, AS CONDITIONS PERMIT, ANY DOCUMENT, DOCUMENTING BOHLER'S REVIEW OF A SPECIFIC ITEM OR LIMITED SCOPE, MUST NOT INDICATE THAT BOHLER HAS REVIEWED THE ENTIRE ASSEMBLY OF WHICH THE ITEM IS A COMPONENT. BOHLER IS NOT RESPONSIBLE FOR ANY DEVIATIONS FROM THE CONSTRUCTION DOCUMENTS. THE CONTRACTOR MUST, IN WRITING, PROMPTLY AND IMMEDIATELY BRING ANY DEVIATIONS FROM THE CONSTRUCTION DOCUMENTS TO BOHLER'S ATTENTION. BOHLER IS NOT REQUIRED TO REVIEW PARTIAL SUBMISSIONS OR THOSE FOR WHICH SUBMISSIONS OF CORRELATED ITEMS HAVE NOT BEEN RECEIVED.
25. IF THE CONTRACTOR DEVIATES FROM THESE PLANS AND/OR SPECIFICATIONS, INCLUDING THE NOTES CONTAINED HEREIN, WITHOUT FIRST OBTAINING THE PRIOR WRITTEN AUTHORIZATION OF THE PROFESSIONAL OF RECORD AND BOHLER FOR ALL DEVIATIONS WITHIN PROFESSIONAL OF RECORDS SCOPE, THE CONTRACTOR IS SOLELY RESPONSIBLE FOR THE PAYMENT OF ALL COSTS INCURRED IN CORRECTING ANY WORK PERFORMED WHICH DEVIATES FROM THE PLANS, ALL FINES AND/OR PENALTIES ASSESSED WITH RESPECT THERETO AND ALL COMPENSATORY OR PUNITIVE DAMAGES RESULTING THEREFROM AND, FURTHER, MUST DEFEND, INDEMNIFY, PROTECT, AND HOLD HARMLESS THE PROFESSIONAL OF RECORD AND BOHLER PARTIES TO THE FULLEST EXTENT PERMITTED UNDER THE LAW, FOR AND FROM ALL FEES, ATTORNEYS' FEES, DAMAGES, COSTS, JUDGMENTS, CLAIMS, INJURIES, PENALTIES AND THE LIKE RELATED TO SAME.
26. THE CONTRACTOR IS RESPONSIBLE FOR A MAINTAINING AND PROTECTING THE TRAFFIC CONTROL PLAN AND ELEMENTS IN ACCORDANCE WITH FEDERAL, STATE, AND LOCAL REQUIREMENTS, FOR ALL WORK THAT AFFECTS PUBLIC TRAVEL EITHER IN THE RIGHT OF WAY OR ON SITE. THE COST FOR THIS ITEM MUST BE INCLUDED IN THE CONTRACTOR'S PRICE AND IS THE CONTRACTOR'S SOLE RESPONSIBILITY.
27. OWNER MUST MAINTAIN ALL PHYSICAL SITE FEATURES AND DESIGN FEATURES DEPICTED ON THE PLANS AND RELATED DOCUMENTS IN STRICT ACCORDANCE WITH THE APPROVED PLAN(S) AND DESIGN; AND, FURTHER, THE PROFESSIONAL OF RECORD AND BOHLER ARE NOT RESPONSIBLE FOR ANY FAILURE TO (A) MAINTAIN OR PRESERVE SITE AND/OR DESIGN FEATURES, IF OWNER FAILS TO MAINTAIN AND/OR PRESERVE ALL PHYSICAL SITE FEATURES AND/OR DESIGN FEATURES DEPICTED ON THE PLANS AND RELATED DOCUMENTS, OWNER AGREES TO INDEMNIFY AND HOLD THE PROFESSIONAL OF RECORD AND BOHLER PARTIES, HARMLESS FOR ALL INJURIES, DAMAGES AND COSTS THAT PROFESSIONAL OF RECORD AND BOHLER INCUR AS A RESULT OF SAID FAILURE OR FAILURE TO PRESERVE.
28. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR ENSURING THAT ALL CONSTRUCTION IS PERFORMED IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL RULES AND REGULATIONS, LAWS, ORDINANCES, AND CODES, AND ALL APPLICABLE REQUIREMENTS OF THE OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970, (29 U.S.C. 651 ET SEQ.) AS AMENDED, AND ANY MODIFICATIONS, AMENDMENTS OR REVISIONS TO SAME.
29. THE CONTRACTOR MUST STRICTLY COMPLY WITH THE LATEST AND CURRENT OSHA STANDARDS AND REGULATIONS, AND/OR ANY OTHER AGENCY WITH JURISDICTION OVER EXCAVATION AND TRENCHING PROCEDURES. PROFESSIONAL OF RECORD AND BOHLER HAS NO RESPONSIBILITY FOR OR AS RELATED TO EXCAVATION AND TRENCHING PROCEDURES AND WORK.
30. THE CONTRACTOR AND THE OWNER MUST INSTALL ALL ELEMENTS AND COMPONENTS IN STRICT COMPLIANCE WITH AND IN ACCORDANCE WITH MANUFACTURER'S STANDARDS AND RECOMMENDED INSTALLATION CRITERIA AND SPECIFICATIONS. IF THE CONTRACTOR AND/OR OWNER FAIL TO DO SO, THEY AGREE TO JOINTLY, INDEPENDENTLY, SEPARATELY, COLLECTIVELY, AND SEVERALLY INDEMNIFY, DEFEND, PROTECT AND HOLD PROFESSIONAL OF RECORD AND BOHLER PARTIES HARMLESS FOR ALL INJURIES AND DAMAGES THAT PROFESSIONAL OF RECORD SUFFERS AND COSTS THAT PROFESSIONAL OF RECORD INCURS AS A RESULT OF SAID FAILURE.
31. THE CONTRACTOR IS RESPONSIBLE TO MAINTAIN AN ON-SITE STORMWATER POLLUTION PREVENTION PLAN (SWPPP) IN COMPLIANCE WITH THE ENVIRONMENTAL PROTECTION AGENCY (EPA) REQUIREMENTS OR LOCAL GOVERNING AGENCY FOR SITES WHERE ONE (1) ACRE OR MORE IS DISTURBED BY CONSTRUCTION ACTIVITIES (UNLESS THE LOCAL JURISDICTION REQUIRES A DIFFERENT THRESHOLD). THE CONTRACTOR MUST ENSURE THAT ALL ACTIVITIES, INCLUDING THOSE OF ALL SUBCONTRACTORS, ARE IN COMPLIANCE WITH THE SWPPP, INCLUDING BUT NOT LIMITED TO LOGGING ACTIVITIES (MINIMUM ONCE PER WEEK AND AFTER RAINFALL EVENTS) AND CORRECTIVE MEASURES, AS APPROPRIATE AND FURTHER, THE CONTRACTOR IS SOLELY AND COMPLETELY RESPONSIBLE FOR FAILING TO DO SO.
32. AS CONTAINED IN THESE DRAWINGS AND ASSOCIATED DOCUMENTS PREPARED BY THE PROFESSIONAL OF RECORD AND BOHLER, THE USE OF THE WORDS 'CERTIFY' OR 'CERTIFICATION' CONSTITUTE(S) AN EXPRESSION ONLY OF PROFESSIONAL OPINION REGARDING THE INFORMATION WHICH IS THE SUBJECT OF THE PROFESSIONAL OF RECORD'S AND BOHLER KNOWLEDGE OR BELIEF AND IN ACCORDANCE WITH COMMON AND ACCEPTED PROCEDURE CONSISTENT WITH THE APPLICABLE STANDARDS OF PRACTICE, AND DOES NOT CONSTITUTE A WARRANTY OR GUARANTEE OF ANY NATURE OR TYPE, EITHER EXPRESSED OR IMPLIED, UNDER ANY CIRCUMSTANCES.

DEMOLITION NOTES

(Rev. 1/2023)

1. THE GENERAL NOTES MUST BE INCLUDED AS PART OF THIS ENTIRE DOCUMENT PACKAGE AND ARE PART OF THE CONTRACT DOCUMENTS. THE GENERAL NOTES ARE REFERENCED HEREIN, AND THE CONTRACTOR MUST REFER TO THEM AND FULLY COMPLY WITH THESE NOTES. IN THEIR ENTIRETY. THE CONTRACTOR MUST BE FAMILIAR WITH AND ACKNOWLEDGE FAMILIARITY WITH ALL OF THE GENERAL NOTES AND ALL OF THE PLANS' SPECIFIC NOTES.
2. THE CONTRACTOR MUST CONDUCT DEMOLITION/REMOVALS ACTIVITIES IN SUCH A MANNER AS TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, SIDEWALKS, WALKWAYS, AND ALL OTHER ADJACENT FACILITIES. THE CONTRACTOR MUST OBTAIN ALL APPLICABLE PERMITS FROM THE APPROPRIATE GOVERNMENTAL AUTHORITY(IES) PRIOR TO THE COMMENCEMENT OF ANY ROAD OPENING OR DEMOLITION ACTIVITIES IN OR ADJACENT TO THE RIGHT-OF-WAY.
3. WHEN DEMOLITION-RELATED ACTIVITIES IMPACT ROADWAYS AND/OR ROADWAY RIGHT-OF-WAY, THE CONTRACTOR MUST PROVIDE TRAFFIC CONTROL AS GENERALLY ACCEPTED SAFE PRACTICES IN CONFORMANCE WITH THE CURRENT FEDERAL HIGHWAY ADMINISTRATION "MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES" (MUTCD), AND THE FEDERAL, STATE, AND LOCAL REGULATIONS.
4. THE DEMOLITION (AND/OR REMOVALS) PLAN IS INTENDED TO PROVIDE GENERAL INFORMATION AND TO IDENTIFY ONLY CONDITIONS REGARDING ITEMS TO BE DEMOLISHED, REMOVED, AND/OR TO REMAIN.
   A. THE CONTRACTOR MUST ALSO REVIEW ALL CONSTRUCTION DOCUMENTS AND INCLUDE WITHIN THE DEMOLITION ACTIVITIES ALL INCIDENTAL WORK NECESSARY FOR THE CONSTRUCTION OF THE NEW SITE IMPROVEMENTS.
   B. THIS PLAN IS NOT INTENDED TO AND DOES NOT PROVIDE INFORMATION REGARDING THE MEANS, METHODS, SEQUENCING, TECHNIQUES AND PROCEDURES TO BE EMPLOYED TO ACCOMPLISH THE WORK. ALL MEANS, METHODS, SEQUENCING, TECHNIQUES AND PROCEDURES TO BE USED MUST BE IN STRICT ACCORDANCE AND CONFORMANCE WITH ALL STATE, FEDERAL, LOCAL, AND JURISDICTIONAL REQUIREMENTS. THE CONTRACTOR MUST COMPLY WITH ALL OSHA AND OTHER SAFETY PRECAUTIONS NECESSARY TO PROVIDE A SAFE WORK SITE FOR THE CONTRACTOR AND THE PUBLIC.
5. THE CONTRACTOR MUST PROVIDE ALL "METHODS AND MEANS" NECESSARY TO PREVENT MOVEMENT, SETTLEMENT, OR COLLAPSE OF EXISTING STRUCTURES, AND ANY OTHER IMPROVEMENTS THAT ARE REMAINING ON OR OFF SITE. THE CONTRACTOR, AT THE CONTRACTOR'S SOLE COST, MUST REPAIR ALL DAMAGE TO ALL ITEMS AND FEATURES THAT ARE TO REMAIN. CONTRACTOR MUST USE NEW MATERIAL FOR ALL REPAIRS. CONTRACTOR'S REPAIRS MUST INCLUDE THE RESTORATION OF ALL ITEMS AND FEATURES REPAIRED TO THEIR PRE-DEMOLITION CONDITION, OR BETTER. CONTRACTOR MUST PERFORM ALL REPAIRS AT THE CONTRACTOR'S SOLE EXPENSE.
6. THE PROFESSIONAL OF RECORD AND BOHLER ARE NOT RESPONSIBLE FOR JOB SITE SAFETY OR SUPERVISION. THE CONTRACTOR MUST PERFORM WITH THE DEMOLITION IN A SYSTEMATIC AND SAFE MANNER, COMPLYING WITH ALL OSHA REQUIREMENTS, TO ENSURE PUBLIC AND CONTRACTOR SAFETY AND SAFETY TO ALL PROPERTY ON THE SITE OR ADJACENT OR NEAR TO THE SAME.
   A. THE CONTRACTOR IS RESPONSIBLE FOR JOB SITE SAFETY, WHICH MUST INCLUDE, BUT IS NOT LIMITED TO, THE INSTALLATION AND MAINTENANCE OF BARRIERS, FENCING, OTHER APPROPRIATE AND/OR NECESSARY SAFETY FEATURES AS ITEMS NECESSARY TO PROTECT THE PUBLIC FROM AREAS OF CONSTRUCTION AND CONSTRUCTION ACTIVITIES. THE CONTRACTOR MUST SAFEGUARD THE SITE AS NECESSARY TO PREVENT THE DEMOLITION IN SUCH A MANNER AS TO PREVENT ANY AND ALL UNAUTHORIZED PERSONS AT ANY TIME, TO OR NEAR THE DEMOLITION AREA.
   B. PRIOR TO THE COMMENCEMENT OF ANY SITE ACTIVITY AND ANY DEMOLITION ACTIVITY, THE CONTRACTOR MUST, IN WRITING, RAISE ANY QUESTIONS CONCERNING THE ACCURACY OR INTENT OF THESE PLANS AND/OR SPECIFICATIONS. ALL CONCERNS OR QUESTIONS REGARDING THE APPLICABLE SAFETY STANDARDS, AND/OR THE SAFETY OF THE CONTRACTOR AND/OR THIRD PARTIES IN PERFORMING THE WORK ON THIS PROJECT. ANY SUCH CONCERNS MUST BE CONVEYED TO THE PROFESSIONAL OF RECORD AND BOHLER, IN WRITING AND MUST ADDRESS ALL ISSUES AND ITEMS RESPONDED TO, BY THE PROFESSIONAL OF RECORD AND BOHLER, IN WRITING. ALL DEMOLITION ACTIVITIES MUST BE PERFORMED IN ACCORDANCE WITH THE REQUIREMENTS OF THESE PLANS AND SPECIFICATIONS AND ALL APPLICABLE FEDERAL, STATE AND LOCAL REGULATIONS, RULES, REQUIREMENTS, STATUTES, ORDINANCES AND CODES.
   C. THE CONTRACTOR MUST BECOME FAMILIAR WITH THE APPLICABLE UTILITY SERVICE PROVIDER REQUIREMENTS AND IS RESPONSIBLE FOR THE COORDINATION WITH SERVICE PROVIDERS REGARDING UTILITY DEMOLITION AND/OR DISCONNECTION OF SERVICES AS REQUIRED FOR THE PROJECT. THE CONTRACTOR MUST PROVIDE THE OWNER WITH WRITTEN NOTIFICATION THAT THE EXISTING UTILITIES AND SERVICES HAVE BEEN TERMINATED AND ABANDONED IN ACCORDANCE WITH THE JURISDICTION AND UTILITY COMPANY REQUIREMENTS AND ALL OTHER APPLICABLE REQUIREMENTS, RULES, STATUTES, LAWS, ORDINANCES AND CODES.
   D. PRIOR TO COMMENCEMENT OF DEMOLITION ACTIVITIES, THE CONTRACTOR MUST CALL THE STATE ONE-CALL DAMAGE PROTECTION SYSTEM FOR UTILITY MARK OUT, IN ADVANCE OF ANY EXCAVATION.
   E. LOCATE AND PROTECT ALL UTILITIES AND SERVICES, INCLUDING BUT NOT LIMITED TO GAS, WATER, ELECTRIC, SANITARY AND STORM SEWER, TELEPHONE, CABLE, FIBER OPTIC CABLE, ETC. WITHIN AND ADJACENT TO THE LIMITS OF PROJECT ACTIVITIES. THE CONTRACTOR MUST USE DUE DILIGENCE AND COMPLY WITH THE REQUIREMENTS OF THE APPLICABLE UTILITY NOTIFICATION SYSTEM TO LOCATE ALL UNDERGROUND UTILITIES.
   F. PROTECT AND MAINTAIN IN OPERATION, ALL ACTIVE UTILITIES AND SYSTEMS THAT ARE NOT BEING REMOVED DURING ANY DEMOLITION ACTIVITIES.
   G. ARRANGE FOR AND COORDINATE WITH THE APPLICABLE UTILITY SERVICE PROVIDER(S) FOR THE TEMPORARY OR PERMANENT REMOVAL OF SERVICE REQUIRED BY THE PROJECT PLANS AND SPECIFICATIONS REGARDING THE METHODS AND MEANS TO CONSTRUCT SAME. THESE ARE NOT THE PROFESSIONAL OF RECORD'S OR BOHLER RESPONSIBILITY AND IN THE EVENT OF ABANDONMENT, THE CONTRACTOR MUST PROVIDE THE UTILITY COMPANY WITH IMMEDIATE WRITTEN NOTIFICATION THAT THE EXISTING UTILITIES AND SERVICES HAVE BEEN TERMINATED AND ABANDONED IN ACCORDANCE WITH JURISDICTIONAL AND UTILITY COMPANY REQUIREMENTS.
   H. ARRANGE FOR AND COORDINATE WITH THE APPLICABLE UTILITY SERVICE PROVIDER(S) REGARDING WORKING "OFF-PEAK" HOURS OR ON WEEKENDS AS NECESSARY OR AS REQUIRED TO MINIMIZE THE IMPACT ON, OF, AND TO THE AFFECTED PARTIES. WORK REQUIRED TO BE PERFORMED "OFF-PEAK" IS TO BE PERFORMED AT NO ADDITIONAL COST TO THE OWNER.
   I. IN THE EVENT THE CONTRACTOR DISCOVERS ANY HAZARDOUS MATERIAL, THE REMOVAL OF WHICH IS NOT ADDRESSED IN THE PROJECT PLANS AND SPECIFICATIONS OR THE CONTRACT WITH THE OWNER/DEVELOPER, THE CONTRACTOR MUST IMMEDIATELY CEASE ALL WORK IN THE AREA OF DISCOVERY AND IMMEDIATELY NOTIFY THE OWNER, PROFESSIONAL OF RECORD AND BOHLER, THE DISCOVERY OF SUCH MATERIALS TO PURSUE PROPER AND LEGAL REMOVAL OF SAME.
11. THE CONTRACTOR MUST NOT PERFORM ANY EARTH MOVEMENT ACTIVITIES, DEMOLITION OR REMOVAL OF FOUNDATION WALLS, FOOTINGS, OR SLABS WITHIN 24 HOURS OF PREDICTED RAIN EVENTS OF 0.5" OR GREATER WITHIN THE NEXT 24 HOURS, UNLESS IN CONFORMANCE WITH THE PROJECT PLANS AND SPECIFICATIONS, OR PURSUANT TO THE WRITTEN DIRECTION OF THE OWNER'S STRUCTURAL OR GEOTECHNICAL ENGINEER.
12. DEMOLITION ACTIVITIES AND EQUIPMENT MUST NOT USE OR INCLUDE AREAS OUTSIDE THE DEFINED PROJECT LIMIT LINE, WITHOUT SPECIFIC WRITTEN PERMISSION AND AUTHORITY OF AND FROM THE OWNER AND ALL GOVERNMENTAL AGENCIES WITH JURISDICTION
13. THE CONTRACTOR MUST BACKFILL ALL EXCAVATION RESULTING FROM, OR INCIDENTAL TO, DEMOLITION ACTIVITIES. BACKFILL MUST BE ACCOMPLISHED WITH APPROVED BACKFILL MATERIALS AND MUST BE SUFFICIENTLY COMPACTED TO SUPPORT ALL NEW IMPROVEMENTS AND MUST BE PERFORMED IN COMPLIANCE WITH THE RECOMMENDATIONS AND GUIDANCE ARTICULATED IN THE GEOTECHNICAL REPORT. BACKFILLING MUST OCCUR IMMEDIATELY AFTER DEMOLITION ACTIVITIES AND MUST BE PERFORMED SO AS TO PREVENT WATER ENTERING THE EXCAVATION. FINISHED SURFACES MUST BE GRADED TO PROMOTE POSITIVE DRAINAGE. THE CONTRACTOR IS RESPONSIBLE FOR COMPACTION TESTING AND MUST SUBMIT SUCH REPORTS AND RESULTS TO THE PROFESSIONAL OF RECORD AND THE OWNER
14. EXPLOSIVES MUST NOT BE USED WITHOUT PRIOR WRITTEN CONSENT FROM BOTH THE OWNER AND ALL APPLICABLE, NECESSARY AND REQUIRED GOVERNMENTAL AUTHORITIES. PRIOR TO COMMENCING ANY EXPLOSIVE PROGRAM AND/OR ANY DEMOLITION ACTIVITIES, THE CONTRACTOR MUST ENSURE AND OVERSEE THE INSTALLATION OF ALL OF THE REQUIRED PERMIT AND EXPLOSIVE CONTROL MEASURES THAT THE FEDERAL, STATE, AND LOCAL GOVERNMENTS REQUIRE. THE CONTRACTOR IS ALSO RESPONSIBLE TO CONDUCT AND PERFORM ALL INSPECTION AND SEISMIC VIBRATION TESTING THAT IS REQUIRED TO MONITOR THE EFFECTS ON ALL LOCAL STRUCTURES AND THE LINE
15. IN ACCORDANCE WITH FEDERAL, STATE, AND/OR LOCAL STANDARDS, THE CONTRACTOR MUST USE DUST CONTROL MEASURES TO LIMIT AIRBORNE DUST AND DIRT RISING AND SCATTERING IN THE AIR. AFTER THE DEMOLITION IS COMPLETE, THE CONTRACTOR MUST CLEAN ALL ADJACENT STRUCTURES AND IMPROVEMENTS TO REMOVE ALL DUST AND DEBRIS WHICH THE DEMOLITION OPERATIONS CAUSE. THE CONTRACTOR IS RESPONSIBLE FOR RETURNING ALL ADJACENT AREAS TO THEIR "PRE-DEMOLITION" CONDITION AT CONTRACTOR'S SOLE COST.
16. PAVEMENT MUST BE SAW CUT IN STRAIGHT LINES. ALL DEBRIS FROM REMOVAL OPERATIONS MUST BE REMOVED FROM THE SITE AT THE TIME OF EXCAVATION. STOCKPILING OF DEBRIS OUTSIDE OF APPROVED AREAS WILL NOT BE PERMITTED, INCLUDING BUT NOT LIMITED TO, THE PUBLIC RIGHT-OF-WAY.
17. THE CONTRACTOR MUST MAINTAIN A RECORD SET OF PLANS WHICH INDICATES THE LOCATION OF EXISTING UTILITIES THAT ARE CAPPED, ABANDONED IN PLACE, OR RELOCATED DUE TO DEMOLITION ACTIVITIES. THIS RECORD DOCUMENT MUST BE PREPARED IN A NEAT AND ORGANIZED MANNER AND TURNED OVER TO THE OWNER/DEVELOPER UPON COMPLETION OF THE WORK, ALL OF WHICH IS AT THE CONTRACTOR'S SOLE COST.
18. THE CONTRACTOR MUST EMPTY, CLEAN AND REMOVE FROM THE SITE ALL UNDERGROUND STORAGE TANKS, IF ENCOUNTERED, IN ACCORDANCE WITH FEDERAL, STATE, COUNTY AND LOCAL REQUIREMENTS, PRIOR TO CONTINUING CONSTRUCTION IN THE AREA AROUND THE TANK WHICH EMPTYING, CLEANING AND REMOVAL ARE AT THE CONTRACTOR'S SOLE COST.

SOIL EROSION & SEDIMENT CONTROL PLAN NOTES



(Rev. 12/2024)

1. THE GENERAL NOTES MUST BE INCLUDED AS PART OF THIS ENTIRE DOCUMENT PACKAGE AND ARE PART OF THE CONTRACT DOCUMENTS. THE GENERAL NOTES ARE REFERENCED HEREIN AND CONTRACTOR MUST REFER TO THEM. THE CONTRACTOR MUST BE FAMILIAR WITH AND ACKNOWLEDGE FAMILIARITY WITH ALL OF THE GENERAL NOTES AND ALL OF THE PLANS' SPECIFIC NOTES.
2. INSTALLATION OF EROSION CONTROL DEVICES MUST BE IN ACCORDANCE WITH ALL OF THE MANUFACTURER'S RECOMMENDATIONS.
3. CONTRACTOR MUST INSTALL ADDITIONAL EROSION CONTROL MEASURES IF ENGINEER OR JURISDICTIONAL AGENCY SO REQUIRES, TO PREVENT THE DISCHARGE OF SEDIMENT LADEN RUNOFF FROM EXITING THE SITE.
4. THE CONTRACTOR IS RESPONSIBLE FOR INSPECTING AND MAINTAINING ALL EROSION CONTROL MEASURES ON THE SITE UNTIL PERMANENT STABILIZATION IS ESTABLISHED, UNLESS SPECIFICALLY NOTED OTHERWISE IN LOCAL, STATE AND/OR FEDERAL PROJECT APPROVALS. THE COST OF INSTALLING AND MAINTAINING THE EROSION CONTROL MEASURES MUST BE INCLUDED IN THE BID PRICE FOR THE SITE WORK AND THE CONTRACTOR IS RESPONSIBLE FOR ALL SUCH COSTS.

SITE LAYOUT NOTES

(Rev. 1/2020)

1. THE GENERAL NOTES MUST BE INCLUDED AS PART OF THIS ENTIRE DOCUMENT PACKAGE AND ARE PART OF THE CONTRACT DOCUMENTS. THE GENERAL NOTES ARE REFERENCED HEREIN AND CONTRACTOR MUST REFER TO THEM AND FULLY COMPLY WITH THESE NOTES. IN THEIR ENTIRETY. THE CONTRACTOR MUST BE FAMILIAR WITH AND ACKNOWLEDGE FAMILIARITY WITH ALL OF THE GENERAL NOTES AND ALL OF THE PLANS' SPECIFIC NOTES.
2. PRIOR TO THE COMMENCEMENT OF GENERAL CONSTRUCTION, THE CONTRACTOR MUST INSTALL SOIL EROSION CONTROL AND STORMWATER POLLUTION PREVENTION PLAN (SWPPP) MEASURES NECESSARY, AS INDICATED ON THE APPROVED SOIL EROSION AND SEDIMENT CONTROL PLAN AND IN ACCORDANCE WITH APPLICABLE AND/OR APPROPRIATE AGENCIES' GUIDELINES AND SPECIFICATIONS. CONTRACTOR MUST INSPECT AND MAINTAIN LOOSE DEBRIS FROM WASHING ONTO ADJACENT PROPERTIES OR THE STREET AS REQUIRED. TO PROMOTE ALL DIRECTIONAL/TRAFFIC SIGNING AND PAVEMENT STRIPING MUST CONFORM TO THE LATEST STANDARDS OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) AND ANY APPLICABLE STATE OR LOCALLY APPROVED SUPPLEMENTS, GUIDELINES, RULES, REGULATIONS, STANDARDS AND THE LINE
3. THE LOCATIONS OF PROPOSED UTILITY POLES AND TRAFFIC SIGNS SHOWN ON THE PLANS ARE SCHEMATIC AND PRELIMINARY. THE CONTRACTOR IS SOLELY RESPONSIBLE FOR FIELD-VERIFYING THEIR LOCATION. THE CONTRACTOR MUST COORDINATE THE RELOCATION OF TRAFFIC SIGNS WITH THE ENTITY WITH JURISDICTION OVER THE P

SHEET TITLE:

OVERALL EROSION AND SEDIMENT CONTROL PLAN

SHEET NUMBER:

C-800

ORG. DATE - 04/21/2025

THE EDUCATION LAW OF THE STATE OF NEW YORK (SECTION 7209) PROHIBITS ANY PERSON, UNLESS HE IS ACTING UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER, WHERE SUCH ALTERATIONS ARE REQUIRED, FROM ALTERING ANY ITEM ON THIS DRAWING/DOCUMENT. IF ANY ITEM IS ALTERED, THE ALTERING ENGINEER SHALL AFFIX TO THE DRAWING/DOCUMENT THE NOTATION "ALTERED BY" FOLLOWED BY HIS SIGNATURE AND THE DATE OF SUCH ALTERATION.

UPSTATE NEW YORK EROSION AND SEDIMENT CONTROL NOTES

1. ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE DONE AS SET FORTH IN THE MOST CURRENT STATE SEDIMENT AND EROSION CONTROL MANUAL.
2. THOSE AREAS UNDERGOING ACTUAL CONSTRUCTION WILL BE LEFT IN AN UNTREATED OR UNVEGETATED CONDITION FOR A MINIMUM TIME. AREAS SHALL BE PERMANENTLY STABILIZED IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL REQUIREMENTS. AT A MINIMUM, AREAS SHALL BE PERMANENTLY STABILIZED ACCORDING TO THE NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL (REFERRED TO AS THE "BLUE BOOK"), OR IN THE ABSENCE OF THE BLUE BOOK, THEY SHALL BE PERMANENTLY STABILIZED WITHIN 14 DAYS OF FINAL GRADING AND TEMPORARILY STABILIZED WITHIN 30 DAYS OF INITIAL DISTURBANCE OF THE SOIL. IF THE DISTURBANCE IS WITHIN 100 FEET OF A STREAM OR POND, THE AREA SHALL BE STABILIZED WITHIN 7 DAYS OR PRIOR TO ANY STORM EVENT (THIS WOULD INCLUDE WETLANDS).
3. SEDIMENT BARRIERS (SILT FENCE, STRAW BARRIERS, ETC.) SHOULD BE INSTALLED PRIOR TO ANY SOIL DISTURBANCE OF THE CONTRIBUTING DRAINAGE AREA ABOVE THEM. MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL AREAS WITH SLOPES GREATER THAN 8%.
4. INSTALL SILTATION BARRIER AT TOE OF SLOPE TO FILTER SILT FROM RUNOFF. SEE SILTATION BARRIER DETAILS FOR PROPER INSTALLATION. SILTATION BARRIER WILL REMAIN IN PLACE PER NOTE #5. THE FOLLOWING EROSION CONTROL MEASURES ARE PROPOSED FOR THIS SITE SUCH AS:
   4.1. AMEND LIST AS NEEDED
5. ALL EROSION CONTROL STRUCTURES WILL BE INSPECTED, REPLACED AND/OR REPAIRED EVERY 7 DAYS AND IMMEDIATELY FOLLOWING ANY SIGNIFICANT RAINFALL OR SNOW MELT OR WHEN NO LONGER SERVICEABLE DUE TO SEDIMENT ACCUMULATION OR DECOMPOSITION. SEDIMENT DEPOSITS SHOULD BE REMOVED AFTER EACH STORM EVENT, THEY MUST BE REMOVED WHEN DEPOSITS REACH APPROXIMATELY ONE HALF THE HEIGHT OF THE BARRIER. SEDIMENT CONTROL DEVICES SHALL REMAIN IN PLACE AND BE MAINTAINED BY THE CONTRACTOR UNTIL AREAS UPSLOPE ARE PERMANENTLY STABILIZED. FOR SEDIMENT CONTROL DEVICES THAT ARE WITHIN AREAS SUBJECT TO CONSERVATION COMMISSION JURISDICTION, THE DEVICES SHALL REMAIN IN PLACE AND BE REMOVED IN ACCORDANCE WITH THE ORDER OF CONDITIONS.
6. NO SLOPES, EITHER PERMANENT OR TEMPORARY, SHALL BE STEEPER THAN TWO TO ONE (2:1) UNLESS OTHERWISE INDICATED ON THE PLANS. SLOPE PROTECTION FOR SLOPES GREATER THAN 2:1 SHALL BE DESIGNED BY A GEOTECHNICAL ENGINEER.
7. IF FINAL SEEDING OF THE DISTURBED AREAS IS NOT COMPLETED 45 DAYS PRIOR TO THE FIRST KILLING FROST, USE TEMPORARY MULCH (DORMANT SEEDING MAY BE ATTEMPTED AS WELL) TO PROTECT THE SITE AND DELAY SEEDING UNTIL THE NEXT RECOMMENDED SEEDING PERIOD.
8. TEMPORARY SEEDING OF DISTURBED AREAS THAT HAVE NOT BEEN FINAL GRADED SHALL BE COMPLETED 45 DAYS PRIOR TO THE FIRST KILLING FROST TO PROTECT FROM SPRING RUNOFF PROBLEMS.
9. DURING THE CONSTRUCTION PHASE, INTERCEPTED SEDIMENT SHALL BE REMOVED AND DISPOSED OF IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL STANDARDS.
10. REVEGETATION MEASURES WILL COMMENCE UPON COMPLETION OF CONSTRUCTION EXCEPT AS NOTED ABOVE. ALL DISTURBED AREAS NOT OTHERWISE STABILIZED WILL BE GRADED, SMOOTHED, AND PREPARED FOR FINAL SEEDING AS FOLLOWS:
    a) SIX INCHES, OR DEPTH SPECIFIED ON THE LANDSCAPE PLAN, OF LOAM WILL BE SPREAD OVER DISTURBED AREAS AND SMOOTHED TO A UNIFORM SURFACE.
    b) APPLY LIMESTONE AND FERTILIZER ACCORDING TO SOIL TEST. IF SOIL TESTING IS NOT FEASIBLE ON SMALL OR VARIABLE SITES, OR WHERE TIMING IS CRITICAL, FERTILIZER MAY BE APPLIED AT THE RATE OF 800 LB PER ACRE OR 18.4 LB PER 1,000 SF USING 10-20-20 OR EQUIVALENT. APPLY GROUND LIMESTONE (EQUIVALENT TO 50% CALCIUM PLUS MAGNESIUM OXIDE) AT A RATE OF 3 TONS PER ACRE (138 LB PER1,000 SF).
    c) FOLLOWING SEED BED PREPARATION, DITCHES AND BACK SLOPES WILL BE SEEDED TO A MIXTURE OF 47% CREEPING RED FESCUE, 5% REDTOP, AND 48% TALL FESCUE. THE LAWN AREAS WILL BE SEEDED TO A PREMIUM TURF MIXTURE OF 44% KENTUCKY BLUE-GRASS, 44% CREEPING RED FESCUE, AND 12% PERENNIAL RYEGRASS; SEEDING RATE IS 1.03 LBS PER 1,000 SF LAWN. QUALITY SOD MAY BE SUBSTITUTED FOR SEED WHERE SLOPES DO NOT EXCEED 2:1, SOD ON SLOPES STEEPER THAN 3:1 SHOULD BE PEGGED.
    d) STRAW MULCH AT THE RATE OF 70-90 LBS PER 1,000 SF. A HYDRO-APPLICATION OF WOOD OR PAPER FIBER SHALL BE APPLIED FOLLOWING SEEDING. A SUITABLE NON-TOXIC BINDER WILL BE USED ON STRAW MULCH FOR WIND CONTROL.
11. ALL TEMPORARY EROSION CONTROL MEASURES SHALL BE REMOVED ONCE THE SITE IS 70% STABILIZED. FOR EROSION CONTROL MEASURES THAT ARE WITHIN AREAS SUBJECT TO CONSERVATION COMMISSION JURISDICTION, THE MEASURES SHALL REMAIN IN PLACE AND BE REMOVED IN ACCORDANCE WITH THE ORDER OF CONDITIONS.
12. WETLANDS WILL BE PROTECTED WITH BARRIERS CONSISTING OF STRAW BALES, COMPOST TUBES, SILT FENCE OR A COMBINATION THEREOF.
13. ALL AREAS WITHIN 100 FEET OF A FLAGGED WETLAND OR STREAM SHALL HAVE AN EXPOSURE WINDOW OF NOT MORE THAN 7 DAYS.
14. ALL AREAS WITHIN 100 FEET OF A FLAGGED WETLAND OR STREAM SHALL FOLLOW APPROPRIATE EROSION CONTROL MEASURES PRIOR TO EACH STORM IF NOT BEING ACTIVELY WORKED:

LOCATION	MULCH	MULCH RATE (1000 SF)
PROTECTED AREA	STRAW	100 POUNDS
WINDY AREA	SHREDDED OR CHOPPED CORNSTALKS STRAW (ANCHORED)*	185-275 POUNDS 100 POUNDS
MODERATE TO HIGH VELOCITY AREAS OR STEEP SLOPES GREATER THAN 3:1	JUTE MESH OR EXCELSIOR MAT	AS REQUIRED
GREATER THAN 3:1	(REFER TO GEOTECHNICAL REPORT FOR FINAL DESIGN REQUIREMENT)	

* A HYDRO-APPLICATION OF WOOD OR PAPER FIBER MAY BE APPLIED FOLLOWING SEEDING. A SUITABLE NON-TOXIC BINDER SHALL BE USED TO ADDITIONAL WIND CONTROL.
MULCH ANCHORING: ANCHOR MULCH WITH PEG AND TWINE (1 SQ. YD/BLOCK); MULCH NETTING (AS PER MANUFACTURER); WOOD CELLULOSE FIBER (750 LBS/ACRE); CHEMICAL TACK (AS PER MANUFACTURER'S SPECIFICATIONS); USE OF A SERRATED STRAIGHT DISK WETTING FOR SMALL AREAS AND ROAD DITCHES MAY BE PERMITTED.

15. STOCKPILING OF MATERIALS (DIRT, WOOD, CONSTRUCTION MATERIALS, ETC.) MUST REMAIN COVERED AT ALL TIMES TO MINIMIZE ANY DUST PROBLEMS THAT MAY OCCUR WITH ADJACENT PROPERTIES AND TO PROVIDE MAXIMUM PROTECTION AGAINST EROSION RUNOFF.
16. EXISTING CATCH BASIN STRUCTURES SHALL BE PROTECTED UNTIL SUCH TIME AS THEY ARE REMOVED.
17. THE CONTRACTOR MUST PERFORM DEWATERING (IF REQUIRED), IN ACCORDANCE WITH STATE AND LOCAL REGULATIONS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO OBTAIN AND PAY FOR THE COSTS ASSOCIATED WITH ANY AND ALL NECESSARY DISCHARGE PERMITS ASSOCIATED WITH SAME.
18. THE CONTRACTOR MUST LOCATE CONSTRUCTION WASTE MATERIAL STORAGE AREAS TO MINIMIZE EXPOSURE TO STORMWATER. THE CONTRACTOR MUST IMMEDIATE PLACE CONSTRUCTION WASTE IN ON-SITE STORAGE CONTAINERS UNTIL THAT CONSTRUCTION WASTE IS READY FOR OFF-SITE DISPOSAL. THE CONTRACTOR MUST MAINTAIN SPILL PREVENTION AND RESPONSE EQUIPMENT AND MAKE SAME CONTINUOUSLY AVAILABLE ON-SITE FOR USE BY THE CONTRACTOR'S EMPLOYEES WHO MUST BE PROPERLY TRAINED IN THE APPLICATION OF SPILL PREVENTION AND RESPONSE PROCEDURES.
19. EROSION CONTROL NOTES DURING WINTER CONSTRUCTION
20. WINTER CONSTRUCTION PERIOD: NOVEMBER 1 THROUGH APRIL 15.
21. WINTER EXCAVATION AND EARTHWORK SHALL BE DONE SUCH THAT THE AMOUNT OF AREA OPEN AT ONE TIME IS MINIMIZED TO THE MAXIMUM EXTENT PRACTICABLE AND IN CONFORMANCE WITH THE STORMWATER POLLUTION PREVENTION PLAN SUCH THAT ADEQUATE PROVISIONS ARE EMPLOYED TO CONTROL STORMWATER RUNOFF.
22. CONTINUATION OF EARTHWORK OPERATION ON ADDITIONAL AREAS SHALL NOT BEGIN UNTIL THE EXPOSED SOIL SURFACE ON THE AREA BEING WORKED HAS BEEN STABILIZED SUCH THAT NO LARGER AREA OF THE SITE IS WITHOUT EROSION CONTROL PROTECTION AS LISTED IN ITEM 2 ABOVE.
23. AN AREA SHALL BE CONSIDERED TO HAVE BEEN TEMPORARILY STABILIZED WHEN EXPOSED SURFACES HAVE BEEN EITHER MULCHED WITH STRAW OR STRAW AT A RATE OF 100 LB. PER 1,000 SQUARE FEET (WITH OR WITHOUT SEEDING) OR DORMANT SEEDED, MULCHED AND ADEQUATELY ANCHORED BY AN APPROVED ANCHORING TECHNIQUE.
24. FOR AREAS WHERE CONSTRUCTION ACTIVITIES HAVE CEASED FOR A PERIOD EXCEEDING 14 DAYS BETWEEN THE DATES OF NOVEMBER 1ST AND APRIL 1ST, LOAM OR SEED WILL NOT BE REQUIRED. THE SLOPES SHALL BE FINE GRADED AND EITHER PROTECTED WITH MULCH OR TEMPORARILY SEEDED. IF THE EXPOSED AREA HAS BEEN LOAMED, FINAL GRADED AND IS SMOOTH, THEN THE AREA MAY BE DORMANT SEEDED AT A RATE OF 200-300% HIGHER THAN SPECIFIED FOR PERMANENT SEED AND THEN MULCHED AS APPLICABLE. SLOPES SHALL NOT BE LEFT UNSTABILIZED OVER THE WINTER OR IN AREAS WHERE WORK HAS CEASED FOR MORE THAN 14 DAYS UNLESS TREATED IN THE ABOVE MANNER. UNTIL SUCH TIME AS WEATHER CONDITIONS ALLOW DITCHES TO BE FINISHED WITH THE PERMANENT SURFACE TREATMENT, EROSION SHALL BE CONTROLLED BY THE INSTALLATION OF SEDIMENT BARRIERS OR STONE CHECK DAMS IN ACCORDANCE WITH THE STANDARD DETAILS.
25. MULCHING REQUIREMENTS:
    a) BETWEEN THE DATES OF NOVEMBER 1ST AND APRIL 15TH ALL MULCH SHALL BE ANCHORED BY EITHER PEG LINE, MULCH NETTING OR WOOD CELLULOSE FIBER.
    b) MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL DRAINAGE WAYS WITH A SLOPE GREATER THAN 3% FOR SLOPE EXPOSED TO DIRECT WINDS AND FOR ALL OTHER SLOPES GREATER THAN 8%.
    c) MULCH NETTING SHALL BE USED TO ANCHOR MULCH IN ALL AREAS WITH SLOPES GREATER THAN 15%. AFTER OCTOBER 1ST THE SAME APPLIES FOR ALL SLOPES GREATER THAN 8%.
26. ALL DISTURBED AREAS SHALL BE STABILIZED IN ACCORDANCE WITH THE STORMWATER PREVENTION PLAN.
27. DURING THE WINTER CONSTRUCTION PERIOD ALL SNOW SHALL BE REMOVED FROM AREAS OF SEEDING AND MULCHING PRIOR TO PLACEMENT.

GENERAL EROSION AND SEDIMENT CONTROL NOTES

1. THE GENERAL NOTES MUST BE INCLUDED AS PART OF THIS ENTIRE DOCUMENT PACKAGE AND ARE PART OF THE CONTRACT DOCUMENTS. THE GENERAL NOTES ARE REFERENCED HEREIN, AND THE CONTRACTOR MUST REFER TO THEM AND FULLY COMPLY WITH THESE NOTES, IN THEIR ENTIRETY. THE CONTRACTOR MUST BE FAMILIAR WITH AND ACKNOWLEDGE FAMILIARITY WITH ALL OF THE GENERAL NOTES AND ALL OF THE PLANS' SPECIFICATIONS.
2. EROSION CONTROL MEASURES MUST CONFORM TO THE STATE, LOCAL, AND FEDERAL GUIDELINES FOR URBAN EROSION AND SEDIMENT CONTROL UNLESS OTHERWISE NOTED, OR UNLESS THE PROFESSIONAL OF RECORD CLEARLY AND SPECIFICALLY, IN WRITING, DIRECTS OTHERWISE. INSTALLATION OF EROSION CONTROL, CLEARING, AND SITE WORK MUST BE PERFORMED EXACTLY AS INDICATED IN THE EROSION CONTROL CONSTRUCTION NOTES.
3. THE DISTURBED LAND AREA OF THIS SITE IS APPROXIMATELY XXX.XX ACRES.
4. THE FOLLOWING EROSION CONTROL MEASURES ARE PROPOSED FOR THIS SITE:
   a) STABILIZED CONSTRUCTION ENTRANCE/ EXIT - A TEMPORARY GRAVEL CONSTRUCTION ENTRANCE/EXIT IS TO BE INSTALLED AT THE DESIGNATED LOCATION SHOWN ON THE PLAN. THIS AREA MUST BE GRADED SO THAT RUNOFF WATER WILL BE RETAINED ON-SITE.
   b) SEDIMENT FENCE - INSTALL SILT FENCE(S) AND/OR SILT SOCK AROUND ALL OF THE DOWNSLOPE PERIMETERS OF THE SITE, TEMPORARY FILL AND SOIL STOCKPILES.
   c) INSTALL FILTER FABRIC DROP INLET PROTECTION AROUND EACH DRAINAGE INLET AS DRAINAGE STRUCTURES ARE INSTALLED TO REDUCE THE QUANTITY OF SEDIMENT. INSTALL TEMPORARY INLET PROTECTION ON INLETS DOWNSLOPE FROM DISTURBANCE, WHICH MAY BE BEYOND THE LIMITS OF DISTURBED AREA.
5. INSTALLATION OF EROSION CONTROL DEVICES MUST BE IN ACCORDANCE WITH ALL OF THE MANUFACTURER'S RECOMMENDATIONS.
6. THE CONTRACTOR MUST INSPECT EROSION CONTROL MEASURES WEEKLY. THE CONTRACTOR MUST REMOVE ANY SILT DEPOSITS GREATER THAN 6 INCHES OR HALF THE EROSION CONTROL BARRIER'S HEIGHT COLLECTED ON THE FILTER FABRIC AND/OR SILT SOCK BARRIERS AND EXCAVATE AND REMOVE ANY SILT FROM DROP INLET PROTECTION.
7. THE CONTRACTOR MUST APPLY TEMPORARY SEED AND MULCH TO ALL DISTURBED AREAS THAT WILL NOT BE BROUGHT TO FINISHED GRADE AND VEGETATED WITHIN 7 DAYS. WHEN AREAS ARE DISTURBED AFTER THE GROWING SEASON, THE CONTRACTOR MUST STABILIZE SAME WITH GEOTEXTILE FABRIC AND MAINTAIN SAME IN STRICT ACCORDANCE WITH BEST MANAGEMENT PRACTICES.
8. THE CONTRACTOR MUST INSTALL ADDITIONAL EROSION CONTROL MEASURES IF THE PROFESSIONAL OF RECORD SO REQUIRES, TO PREVENT ANY, INCLUDING THE INCIDENTAL, DISCHARGE OF SILT-LADEN RUNOFF FROM EXITING THE SITE.
9. THE CONTRACTOR MUST BE RESPONSIBLE FOR INSPECTING AND MAINTAINING ALL EROSION CONTROL MEASURES ON THE SITE UNTIL PERMANENT PAVING AND TURF/LANDSCAPING IS ESTABLISHED. THE COSTS OF INSTALLING AND MAINTAINING THE EROSION CONTROL MEASURES MUST BE INCLUDED IN THE BID PRICE FOR THE SITE WORK AND THE CONTRACTOR IS RESPONSIBLE FOR ALL SUCH COSTS.
10. THE CONTRACTOR MUST CONTINUE TO MAINTAIN ALL EROSION CONTROL MEASURES UNTIL THE COMPLETION OF CONSTRUCTION AND THE ESTABLISHMENT OF VEGETATION.
11. THE CONTRACTOR MUST REMOVE EROSION CONTROL MEASURES, SILT AND DEBRIS AFTER ESTABLISHING PERMANENT VEGETATION COVER OR OTHER INSTALLING A DIFFERENT, SPECIFIED METHOD OF STABILIZATION.
12. THIS PLAN REPRESENTS THE MINIMUM LEVEL OF IMPLEMENTATION OF TEMPORARY EROSION AND SEDIMENTATION CONTROL FACILITIES, MEASURES AND STRUCTURES. ADDITIONAL FACILITIES, MEASURES AND STRUCTURES MUST BE INSTALLED WHERE NECESSARY TO COMPLY WITH ALL APPLICABLE CODES AND STANDARDS AND/OR TO PREVENT ANY, INCLUDING THE INCIDENTAL, DISCHARGE OF SILT-LADEN RUNOFF FROM EXITING THE SITE.
13. THE CONTRACTOR MUST PROTECT ALL EXISTING TREES AND SHRUBS. THE CONTRACTOR MUST REFER TO THE LANDSCAPE AND/OR DEMOLITION PLAN(S) FOR TREE PROTECTION, FENCE LOCATIONS AND DETAILS.
14. THE CONTRACTOR MUST REFER TO GRADING PLANS FOR ADDITIONAL INFORMATION.
15. THE CONTRACTOR MUST CLEAN EXISTING AND PROPOSED DRAINAGE STRUCTURES AND INTERCONNECTING PIPES ON OR OFF-SITE AS THE JURISDICTIONAL AGENCY REQUIRES, BOTH AT THE TIME OF SITE STABILIZATION AND AT END OF PROJECT.
16. SOIL EROSION CONTROL MEASURES MUST BE ADJUSTED OR RELOCATED BY THE CONTRACTOR AS IDENTIFIED DURING SITE OBSERVATION IN ORDER TO MAINTAIN THE COMPLETE EFFECTIVENESS OF ALL CONTROLS.
17. THE CONTRACTOR MUST IDENTIFY, ON THE PLAN, THE LOCATION OF WASTE CONTAINERS, FUEL STORAGE TANKS, CONCRETE WASHOUT AREAS AND ANY OTHER LOCATIONS WHERE HAZARDOUS MATERIALS ARE STORED.

SOIL RESTORATION PROCEDURE, PER NYSDEC "BLUE BOOK":

DURING PERIODS OF RELATIVELY LOW TO MODERATE SUBSOIL MOISTURE, THE DISTURBED SUBSOILS ARE RETURNED TO ROUGH GRADE AND THE FOLLOWING SOIL RESTORATION STEPS APPLIED:
1. APPLY 3 INCHES OF COMPOST OVER SUBSOIL.
2. TILL COMPOST INTO SUBSOIL TO A DEPTH OF AT LEAST 12 INCHES USING A CAT-MOUNTED RIPPER, TRACTOR-MOUNTED DISC, OR TILLER, MIXING, AND CIRCULATING AIR AND COMPOST INTO SUBSOILS.
3. ROCK-PICK UNTIL UPLIFTED STONE/ROCK MATERIALS OF FOUR INCHES AND LARGER SIZE ARE CLEANED OFF THE SITE.
4. APPLY TOPSOIL TO A DEPTH OF 6 INCHES.
5. VEGETATE AS REQUIRED BY APPROVED PLAN.

AT THE END OF THE PROJECT AN INSPECTOR SHOULD BE ABLE TO PUSH A 3/8" METAL BAR 12 INCHES INTO THE SOIL JUST WITH BODY WEIGHT. TILLING (STEP 2 ABOVE) SHOULD NOT BE PERFORMED WITHIN THE DRIP LINE OF ANY EXISTING TREES OR OVER UTILITY INSTALLATIONS THAT ARE WITHIN 24 INCHES OF THE SURFACE.

COMPOST SPECIFICATIONS:

COMPOST SHALL BE AGED, FROM PLANT DERIVED MATERIALS, FREE OF VIABLE WEED SEEDS, HAVE NO VISIBLE FREE WATER OR DUST PRODUCED WHEN HANDLING, PASS THROUGH A HALF INCH SCREEN AND HAVE A PH SUITABLE TO GROW DESIRED PLANTS WITH NO OBJECTIONABLE ODORS.

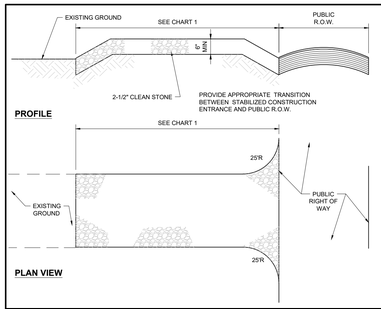
MAINTENANCE:

A SIMPLE MAINTENANCE AGREEMENT SHOULD IDENTIFY WHERE SOIL RESTORATION IS APPLIED, WHERE NEWLY RESTORED AREAS ARE/CANNOT BE CLEARED, WHO THE RESPONSIBLE PARTIES ARE TO ENSURE THAT ROUTINE VEGETATION IMPROVEMENTS ARE MADE (I.E., THINNING, INVASIVE PLANT REMOVAL, ETC.). SOIL COMPOST AMENDMENTS WITHIN A FILTER STRIP OR GRASS CHANNEL SHOULD BE LOCATED IN PUBLIC RIGHT OF WAY, OR WITHIN A DEDICATED STORMWATER OR DRAINAGE EASEMENT.

FIRST YEAR MAINTENANCE OPERATIONS INCLUDES:
- INITIAL INSPECTIONS FOR THE FIRST SIX MONTHS (ONCE AFTER EACH STORM GREATER THAN HALF-INCH).
- RESEEDING TO REPAIR BARE OR ERODING AREAS TO ASSURE GRASS STABILIZATION
- WATER ONCE EVERY THREE DAYS FOR FIRST MONTH, AND THEN PROVIDE A HALF INCH OF WATER PER WEEK DURING FIRST YEAR. IRRIGATION PLAN MAY BE ADJUSTED ACCORDING TO THE RAIN EVENT.
- FERTILIZATION MAY BE NEEDED IN THE FALL AFTER THE FIRST GROWING SEASON TO INCREASE PLANT VIGOR.

ONGOING MAINTENANCE:

TWO POINTS HELP ENSURE LASTING RESULTS OF DECOMPACTION:
1. PLANTING THE APPROPRIATE GROUND COVER WITH DEEP ROOTS TO MAINTAIN SOIL STRUCTURE.
2. KEEPING THE SITE FREE OF VEHICULAR AND FOOT TRAFFIC OR OTHER WEIGHT LOADS. CONSIDER PEDESTRIAN FOOTPATHS. (SOMETIMES IT MAY BE NECESSARY TO DE-THATCH THE TURF EVERY FEW YEARS).



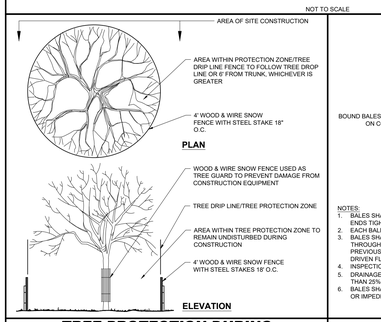
SOIL RESTORATION REQUIREMENTS

TYPE OF DISTURBANCE	SOIL RESTORATION REQUIREMENT
NO SOIL DISTURBANCE	RESTORATION NOT PERMITTED
MINIMAL SOIL DISTURBANCE	RESTORATION NOT REQUIRED
AREAS WHERE TOPSOIL IS STRIPPED ONLY - NO CHANGE IN GRADE	HSG A&B: APPLY 6" OF TOPSOIL HSG C&D: AERATE AND APPLY 6" OF TOPSOIL
AREAS OF CUT OR FILL	HSG A&B: AERATE AND APPLY 6" OF TOPSOIL HSG C&D: APPLY FULL SOIL RESTORATION (SEE NOTES ON SHEET C-602)
HEAVY TRAFFIC AREAS ON SITE (ESPECIALLY IN A ZONE 5-25 FEET AROUND BUILDINGS BUT NOT WITHIN 5 FOOT PERIMETER AROUND FOUNDATION WALLS)	APPLY FULL SOIL RESTORATION (DE-COMPACTION AND COMPOST ENHANCEMENT, PER CURRENT VERSION OF NYS DEC DEEP RIPPING AND DECOMPACTION)
AREAS WHERE RUNOFF REDUCTION AND OR INFILTRATION PRACTICES ARE APPLIED	RESTORATION NOT REQUIRED, BUT MAY BE APPLIED TO ENHANCE THE REDUCTION SPECIFIED FOR APPROPRIATE PRACTICES.
REDEVELOPMENT PROJECTS	SOIL RESTORATION IS REQUIRED ON REDEVELOPMENT PROJECTS IN AREAS WHERE EXISTING IMPERVIOUS AREA WILL BE CONVERTED TO PERVIOUS AREA.

THE FOLLOWING CONSTRUCTION SEQUENCE IS RECOMMENDED:
- INSTALLATION OF STABILIZED CONSTRUCTION ENTRANCE/EXIT (AS SHOWN)
- INSTALLATION OF EROSION CONTROL BARRIER (STRAW BALES AND SILT FENCE) (AS SHOWN)
- INSTALLATION OF INLET PROTECTION IN STREET (AS SHOWN)
- DEMOLITION OF EXISTING SITE STRUCTURES (SEE DEMOLITION PLAN)
- DEMOLITION OF EXISTING SITE PAVEMENT AND AMENITIES (SEE DEMOLITION PLAN)
- CLEARING AND GRUBBING
- INSTALLATION OF TEMPORARY SWALES AND SEDIMENT BASINS
- EARTHWORK AND EXCAVATION/FILLING AS NECESSARY
- CONSTRUCTION OF UTILITIES
- STABILIZE PERMANENT LAWN AREAS AND SLOPES WITH TEMPORARY SEEDING
- INSTALLATION OF INLET PROTECTION OF ON-SITE UTILITIES (AS SHOWN)
- CONSTRUCTION OF BUILDINGS
- CONSTRUCTION OF ALL CURBING AND LANDSCAPE ISLANDS AS INDICATED ON THE PLANS
- SPREAD TOPSOIL ON SLOPED AREAS AND SEED AND MULCH
- FINAL GRADING OF ALL SLOPED AREAS
- PLACE 6" TOPSOIL ON SLOPES AFTER FINAL GRADING COMPLETED. FERTILIZE, SEED, AND MULCH SEED MIXTURE TO BE INSTALLED AS REQUIRED.
- REMOVAL OF THE TEMPORARY SEDIMENT BASINS
- PAVE PARKING LOT
- LANDSCAPING PER LANDSCAPING PLAN
- REMOVE EROSION CONTROLS AS DISTURBED AREAS BECOME STABILIZED TO 70% STABILIZATION OR GREATER

RECOMMENDED CONSTRUCTION SEQUENCE

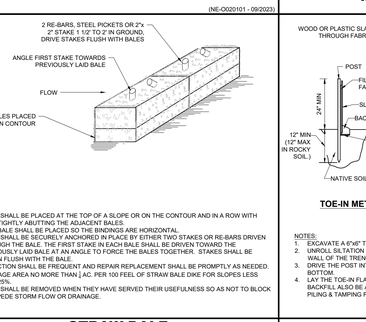
NOT TO SCALE (NE-0990101 - 09/2023)



PERCENT SLOPE OF ROADWAY	LENGTH OF STONE REQUIRED	
	COARSE GRAINED SOILS	FINE GRAINED SOILS
0 TO 2%	50 FT	100 FT
2% TO 5%	100 FT	200FT
>5%	ENTIRE ENTRANCE STABILIZED WITH FABC BASE COURSE (1)	

(1) AS PRESCRIBED BY LOCAL ORDINANCE OR OTHER GOVERNING AUTHORITY.

CHART 1



STABILIZED CONSTRUCTION ENTRANCE

NOT TO SCALE (NE-0020101 - 09/2023)

TREE PROTECTION DURING SITE CONSTRUCTION

NOT TO SCALE (NE-0030201 - 09/2023)

NOTES:
1. BALES SHALL BE PLACED AT THE TOP OF A SLOPE OR ON THE CONTOUR AND IN A ROW WITH ENDS TIGHTLY ABUTTING THE ADJACENT BALES.
2. EACH BALE SHALL BE PLACED SO THE BINDINGS ARE HORIZONTAL.
3. BALES SHALL BE SECURELY ANCHORED IN PLACE BY EITHER TWO STAKES OR RE-BARS DRIVEN THROUGH THE BALE. THE FIRST STAKE IN EACH BALE SHALL BE DRIVEN TOWARD THE PREVIOUSLY LAID BALE AT AN ANGLE TO FORCE THE BALES TOGETHER. STAKES SHALL BE DRIVEN FLUSH WITH THE BALE.
4. INSPECTION SHALL BE FREQUENT AND REPAIR REPLACEMENT SHALL BE PROMPTLY AS NEEDED.
5. DRAINAGE AREA NO MORE THAN ¼ AC. PER 100 FEET OF STRAW BALE DIKE FOR SLOPES LESS THAN 25%.
6. BALES SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFULNESS SO AS NOT TO BLOCK OR IMPEDE STORM FLOW OR DRAINAGE.

STRAW BALE BARRIER

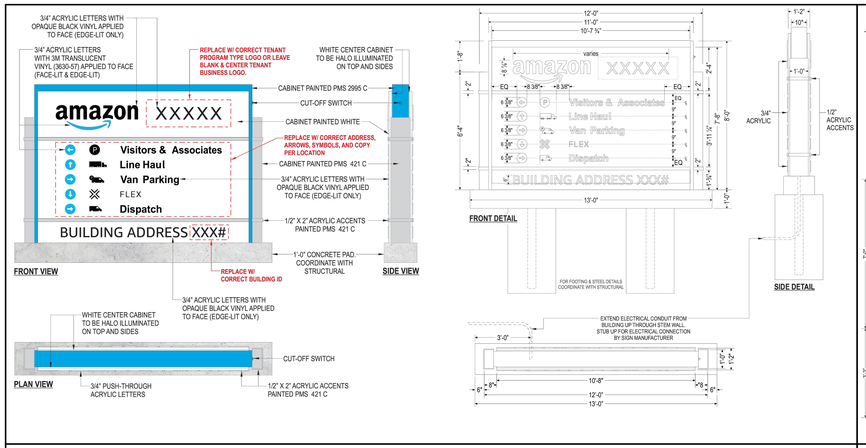
NOT TO SCALE (NE-0030302 - 09/2023)

NOTES:
1. ALL MATERIAL TO MEET MANUFACTURER SPECIFICATIONS
2. COMPOST FILTER SOCK FILL TO MEET APPLICATION REQUIREMENTS.
3. COMPOST MATERIAL TO BE DISPERSED ON SITE AT COMPLETION OF CONSTRUCTION OR AS DIRECTED BY OWNER AFTER STABILIZATION IS ACHIEVED.

OR APPROVED EQUIVALENT

COMPOST FILTER SOCK

NOT TO SCALE (NE-0040201 - 09/2023)



NOTES:
1. PREPARE SOIL BEFORE INSTALLING BLANKETS, INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED.
2. BEGIN AT THE TOP OF THE SLOPE BY ANCHORING THE BLANKET IN A 6" DEEP X 6" WIDE TRENCH WITH APPROXIMATELY 12" OF BLANKET EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH AS SHOWN IN DETAIL 2. ANCHOR THE BLANKET WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" PORTION OF BLANKET BACK OVER SEED AND COMPACTED SOIL. SECURE BLANKET OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" APART ACROSS THE WIDTH OF THE BLANKET.
3. ROLL THE BLANKETS (A) DOWN OR (B) HORIZONTALLY ACROSS THE SLOPE. BLANKETS WILL UNROLL WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL BLANKETS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES IN APPROPRIATE LOCATIONS AS PER MANUFACTURES RECOMMENDATION.
4. THE EDGES OF PARALLEL BLANKETS MUST BE STAPLED WITH MINIMUM 6" OVERLAP. TO ENSURE PROPER SEAM ALIGNMENT, PLACE THE EDGE OF THE OVERLAPPING BLANKET (BLANKET BEING INSTALLED ON TOP) EVEN WITH THE SEAM STITCH ON THE PREVIOUSLY INSTALLED BLANKET.
5. CONSECUTIVE BLANKETS SPLICED DOWN THE SLOPE MUST BE PLACED END OVER END (SHINGLE STYLE) WITH AN APPROXIMATE 3" OVERLAP. STAPLE THROUGH OVERLAPPED AREA, APPROXIMATELY 12" APART ACROSS ENTIRE BLANKET WIDTH.
6. PLACE STAPLES/STAKES PER MANUFACTURER'S RECOMMENDATION FOR THE APPROPRIATE SLOPE BEING APPLIED.
7. IN LOOSE SOIL CONDITIONS, THE USE OF STAPLE OR STAKE LENGTHS GREATER THAN 6" MAY BE NECESSARY TO PROPERLY SECURE THE BLANKETS.

EROSION CONTROL BLANKET STEEP SLOPE PROTECTION

NOT TO SCALE (NE-0049901 - 09/2023)

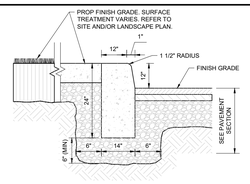
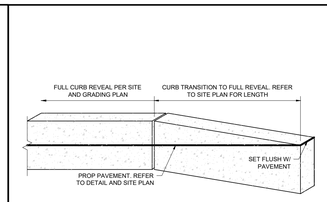
PRECAST 6" CONCRETE CURB



NOT TO SCALE (NE-5020201 - 10/2024)

NOTES:
1. CURB SHALL CONSIST OF 4,000 PSI AIR ENTRAINED CONCRETE, EXPOSED EDGES TO HAVE RUBBED FINISH, AND SURFACE SHALL BE TREATED WITH A CONCRETE PENETRANT/SEALER.
2. THE ENDS OF CURB SECTIONS SHALL BE CHAMFERED 1/4 INCH.
3. THE CORNERS OF CURB SECTIONS SHALL MATCH THE ADJACENT CURB IN SIZE, COLOR AND FINISH.
4. CURBS, CURB CORNERS OR EDGING SHALL BE FITTED TOGETHER AS CLOSELY AS POSSIBLE.
5. EXPANSION JOINTS SHALL BE INSTALLED AT A MAXIMUM OF TWENTY FEET (20') ON CENTER USING PREFORMED EXPANSION JOINT FILLER HAVING A THICKNESS OF ½ INCH.
6. PAVEMENT SECTION DEPTHS, MATERIAL, AND SPECIFICATIONS PER PAVEMENT SECTION DETAIL.
7. STRAIGHT CURB SECTIONS CAN BE USED FOR RADII 25' OR GREATER. OTHERWISE, CURVED CURB LENGTHS SHALL BE INSTALLED AT THE SPECIFIED RADIUS PER THE SITE PLAN.

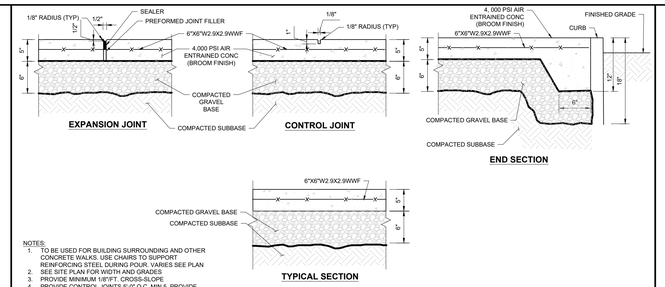
PRECAST 12" CONCRETE CURB



NOT TO SCALE (NE-5020201 - 10/2024)

NOTES:
1. CURB SHALL CONSIST OF 4,000 PSI AIR ENTRAINED CONCRETE, EXPOSED EDGES TO HAVE RUBBED FINISH, AND SURFACE SHALL BE TREATED WITH A CONCRETE PENETRANT/SEALER.
2. THE ENDS OF CURB SECTIONS SHALL BE CHAMFERED 1/4 INCH.
3. THE CORNERS OF CURB SECTIONS SHALL MATCH THE ADJACENT CURB IN SIZE, COLOR AND FINISH.
4. CURBS, CURB CORNERS OR EDGING SHALL BE FITTED TOGETHER AS CLOSELY AS POSSIBLE.
5. EXPANSION JOINTS SHALL BE INSTALLED AT A MAXIMUM OF TWENTY FEET (20') ON CENTER USING PREFORMED EXPANSION JOINT FILLER HAVING A THICKNESS OF ½ INCH.
6. PAVEMENT SECTION DEPTHS, MATERIAL, AND SPECIFICATIONS PER PAVEMENT SECTION DETAIL.
7. STRAIGHT CURB SECTIONS CAN BE USED FOR RADII 25' OR GREATER. OTHERWISE, CURVED CURB LENGTHS SHALL BE INSTALLED AT THE SPECIFIED RADIUS PER THE SITE PLAN.

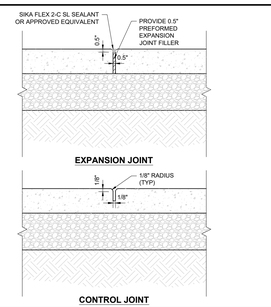
PRECAST CONCRETE TRANSITION CURB



NOT TO SCALE (NE-5020206 - 09/2023)

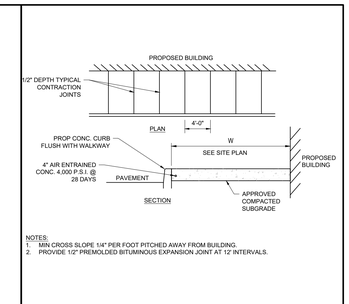
NOTES:
1. SEE TYPICAL CURB DETAIL AND SITE PLAN FOR CURB TYPE AND TRANSITION CURB LOCATIONS

CONCRETE SIDEWALK



NOT TO SCALE (NE-5030201 - 10/2024)

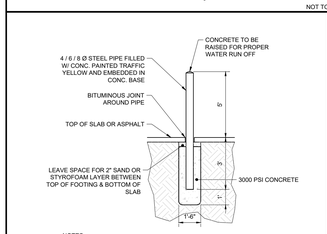
NOTES:
1. TO BE USED FOR BUILDING SURROUNDING AND OTHER CONCRETE WALKS. USE CHAIRS TO SUPPORT REINFORCING STEEL DURING POUR. VARIES SEE PLAN
2. SEE SITE PLAN FOR WIDTH AND GRADES
3. PROVIDE MINIMUM 1/8"/FT. CROSS-SLOPE
4. PROVIDE CONTROL JOINTS 5'-0" O.C. MIN 5. PROVIDE EXPANSION JOINTS 20'-0" O.C. MIN AT EXPANSION JOINTS. PROVIDE DOWELS @ 24" O.C.



SIDEWALK CONSTRUCTION JOINTS

NOT TO SCALE (BE-5030401 - 08/2023)

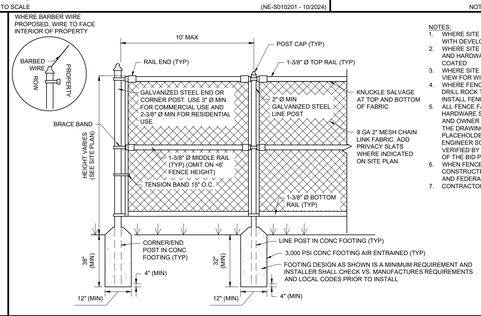
SIDEWALK ALONG BUILDING



NOT TO SCALE (NE-5030209 - 09/2023)

NOTES:
1. MIN CROSS SLOPE 1/4" PER FOOT PITCHED AWAY FROM BUILDING.
2. PROVIDE 1/2" PREMOLDED BITUMINOUS EXPANSION JOINT AT 12' INTERVALS.

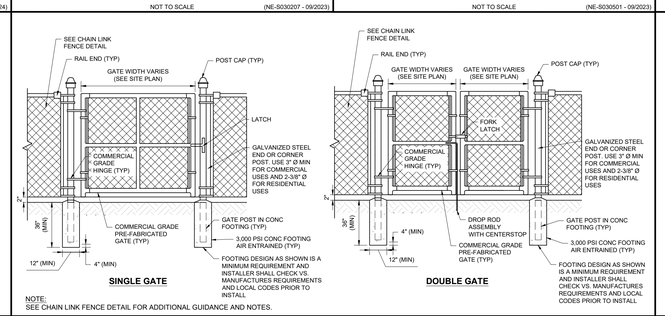
CONCRETE PAVING FOR LOADING DOCK APRON, COMPACTOR PAD, AND/OR DOLLY PAD



NOT TO SCALE (NE-5010201 - 10/2024)

NOTES:
1. BOLLARDS REQUIRED AT BUILDING CORNERS, FIRE HYDRANTS, WATER METER, GAS METER, SPRINKLER RISER, SHOWN TRANSFORMER & ALL UTILITIES AT LOCATIONS SHOWN ON THESE DRAWINGS INTERIOR & EXTERIOR.

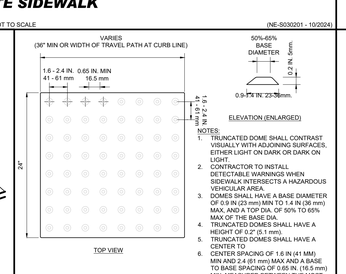
ACCESSIBLE RAMP TYPE C



NOT TO SCALE (NE-5030206 - 10/2024)

NOTES:
1. WHERE SITE PLAN INDICATES VINYL SLATS, COLOR TO BE COORD WITH DEVELOPER PRIOR TO ORDERING OF MATERIALS.
2. WHERE SITE PLAN INDICATES VINYL COATED FENCE, ALL POSTS AND HARDWARE TO BE BLACK AND 2" MESH TO BE BLACK VINYL COATED.
3. WHERE SITE PLAN INDICATES BARBED WIRE FENCE, SEE INSET VIEW FOR WIRE FACING INTERIOR PROPERTY
4. WHERE FENCE WILL BE FOUNDED ON COMPETENT ROCK, CORE DRILL ROCK TO POST DIAMETER PLUS 2" MINIMUM 24" IN DEPTH, INSTALL FENCE POST AND BACKFILL WITH NON-SHRINK GROUT.
5. ALL FENCE FABRIC, POSTS, MATERIALS, COATINGS, GATES AND HARDWARE SHALL BE CONFIRMED BY THE PROJECT ARCHITECT AND OWNER PRIOR TO ORDERING UNLESS OTHERWISE NOTED ON THE DRAWINGS. FENCE POST DIAMETERS SHOWN ARE PLACEHOLDERS FOR BID ONLY AND NOT PART OF THE CIVIL ENGINEER SCOPE. FINAL POST SIZE/SCHEDULE SHALL BE VERIFIED BY CONTRACTOR BASED ON SITE CONDITIONS AS PART OF THE BID PROCESS.
6. WHEN FENCE IS TO BE USED AS A GUARD IT SHALL BE CONSTRUCTED IN ACCORDANCE WITH ALL APPLICABLE STATE AND FEDERAL CODES
7. CONTRACTOR TO SUBMIT SHOP DRAWING FOR APPROVAL

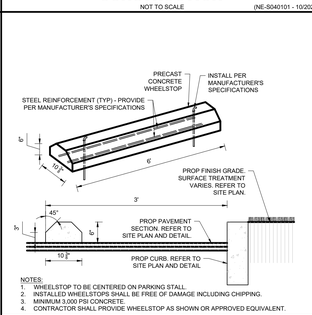
ACCESSIBLE RAMP TYPE D



NOT TO SCALE (NE-5030207 - 09/2023)

NOTE:
SEE CHAIN LINK FENCE DETAIL FOR ADDITIONAL GUIDANCE AND NOTES.

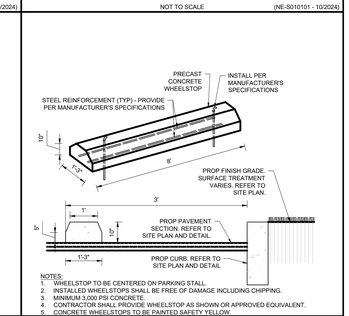
DETECTABLE WARNING STRIP



NOT TO SCALE (NE-5030501 - 09/2023)

NOTES:
1. TRUNCATED DOME SHALL CONTRAST VISUALLY WITH ADJOINING SURFACES, EITHER LIGHT ON DARK OR DARK ON LIGHT.
2. CONTRACTOR TO INSTALL DETECTABLE WARNINGS WHEN SIDEWALK INTERSECTS A HAZARDOUS VEHICULAR AREA.
3. DOMES SHALL HAVE A BASE DIAMETER OF 0.9 IN (23 mm) MIN TO 1.4 IN (36 mm) MAX, AND A TOP DIA. OF 50% TO 65% MAX OF THE BASE DIA.
4. TRUNCATED DOMES SHALL HAVE A HEIGHT OF 0.2" (5.1 mm).
5. TRUNCATED DOMES SHALL HAVE A CENTER TO
6. CENTER SPACING OF 1.6 IN (41 MM) MIN AND 2.4 (61 mm) MAX AND A BASE TO BASE SPACING OF 0.65 IN. (16.5 mm) MIN. MEASURED BETWEEN THE MOST ADJACENT DOMES ON THE GRID.

DRIVEWAY CONSTRUCTION



NOT TO SCALE (NE-5040101 - 10/2024)

NOTES:
1. TACK COAT RECOMMENDED IF TIMING BETWEEN BINDER AND TOP COURSE INSTALLATION IS GREATER THAN 48 HOURS.
2. SWEEP BINDER COURSE CLEAN OF ALL DEBRIS PRIOR TO PLACING OF TACK COAT AND ASPHALT.
3. REFER TO GEOTECHNICAL REPORT FOR PAVEMENT SPECIFICATIONS AND OTHER REQUIREMENTS. OTHERWISE PAVEMENT BASE AND SUBBASE COURSE SHALL CONFORM TO ALL STATE HIGHWAY DIVISION SPECIFICATIONS.

PAVEMENT SECTION

NOT TO SCALE (NE-5010101 - 10/2024)

NOTES:
1. PAVEMENT BASE AND SUBBASE COURSES TO CONFORM TO STATE DEPARTMENT OF TRANSPORTATION
2. GC TO REFER TO GEOTECHNICAL REPORT FOR PAVEMENT SPECIFICATIONS.

BOLLARD

NOT TO SCALE (NE-5070101 - 09/2023)

CHAIN LINK FENCE

NOT TO SCALE (NE-5080204 - 10/2024)

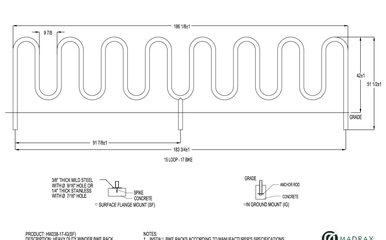
CHAIN LINK FENCE GATES

NOT TO SCALE (NE-5080203 - 02/2025)

CONCRETE AUTO WHEELSTOP

NOT TO SCALE (NE-5029902 - 12/2024)

NOTES:
1. WHEELSTOP TO BE CENTERED ON PARKING STALL.
2. INSTALLED WHEELSTOPS SHALL BE FREE OF DAMAGE INCLUDING CHIPPING.
3. MINIMUM 3,000 PSI CONCRETE.
4. CONTRACTOR SHALL PROVIDE WHEELSTOP AS SHOWN OR APPROVED EQUIVALENT.



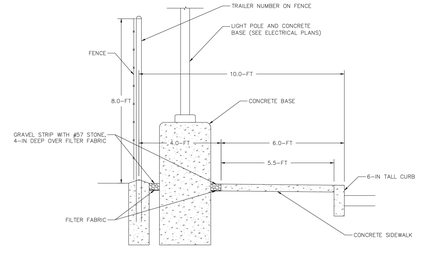
CONCRETE TRUCK WHEELSTOP

NOT TO SCALE (NE-5029902 - 12/2024)

NOTES:
1. WHEELSTOP TO BE CENTERED ON PARKING STALL.
2. INSTALLED WHEELSTOPS SHALL BE FREE OF DAMAGE INCLUDING CHIPPING.
3. MINIMUM 3,000 PSI CONCRETE.
4. CONTRACTOR SHALL PROVIDE WHEELSTOP AS SHOWN OR APPROVED EQUIVALENT.
5. CONCRETE WHEELSTOPS TO BE PAINTED SAFETY YELLOW.

BIKE RACK (MODEL HW238-17-IG)

NOT TO SCALE



PRODUCT: HW238-17-IGSF
DESCRIPTION: HEAVY DUTY WINDER BIKE RACK
17 BIKE, SURFACE OR IN GROUND MOUNT
DATE: 10-26-16
ENG: SMC

NOTES:
1. INSTALL BIKE RACKS ACCORDING TO MANUFACTURER'S SPECIFICATIONS.
2. CONSULTANT TO SELECT COLOR (FINISH), SEE MANUFACTURER'S SPECIFICATIONS.
3. SEE SITE PLAN FOR LOCATION OR CONSULT OWNER.
4. BIKE RACKS SHALL BE POWDER COATED BLACK.

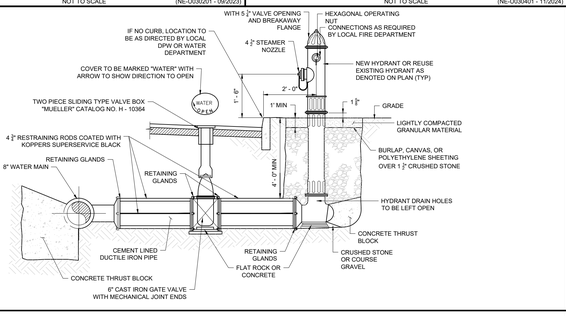
12"	3	3	5	3	3	5	2.5	3	5	2.5	3	5

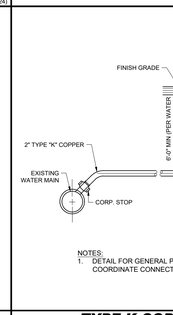
NOTES:
1. DO NOT COVER BELLS OR FLANGES WITH CONCRETE
2. WRAP ALL FITTINGS WITH VISQUEEN.
3. BACK ALL TEES ACCORDING TO SIZE OF BRANCH.
4. BACKING FUTURE LINE EXTENSIONS SHALL BE SUCH THAT LATER REMOVAL IS POSSIBLE.
5. ALL BENDS WHERE FITTINGS ARE USED, BOTH HORIZONTAL OR VERTICAL SHALL BE BACKED.
6. REACTION BACKING TABLE IS BASED ON 100 PSI AND SOIL BEARING PRESSURE OF 2,000 LBS/SF ADDITIONAL BACKING MAY BE REQUIRED IN SOME AREAS AS DIRECTED BY ENGINEERS.
7. ALL CONCRETE SHALL BE 2500 PSI
8. 18" AND LARGER REQUIRES SPECIFIC ANTI-THRUST DESIGN.

VERTICAL THRUST BLOCKING



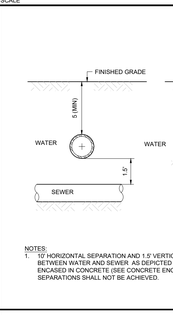
NOT TO SCALE (NE-U030502 - 11/2024)

NOTES:
1. ALL STRUCTURES SHALL BE SUITABLE FOR H-20 LOADING AND SHALL MEET THE REQUIREMENTS OF ASTM C478.
2. CONCRETE SHALL BE 4,000 PSI AFTER 28 DAYS
3. REINFORCED STEEL CONFORMS TO ASTM A185 SPEC. 0.12 SQ IN/LINEAL FT AND 0.12 SQ IN (BOTH WAYS) BASE BOTTOM.
4. MANHOLE DESIGN SPECS CONFORM TO ASTM C478 SPEC FOR "PRECAST REINFORCED CONCRETE MANHOLE SECTIONS"



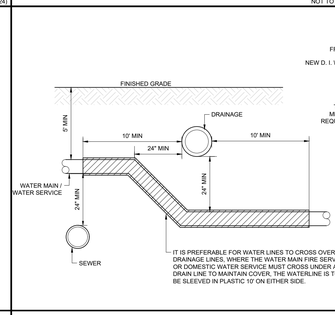
PRECAST CONCRETE CATCH BASIN WITH DOUBLE GRATE

NOT TO SCALE (NE-U010202 - 11/2024)

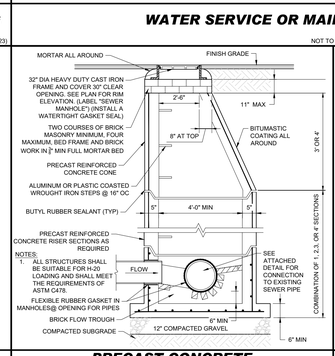


HYDRANT AND VALVE INSTALLATION

NOT TO SCALE (NE-U030101 - 11/2024)



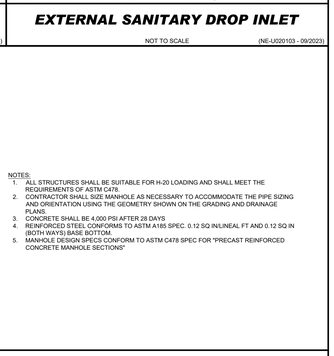
NOTES:
1. DETAIL FOR GENERAL PURPOSES. GC TO COORDINATE CONNECTION WITH UTILITY PROVIDER.



NOTES:
1. 10' HORIZONTAL SEPARATION AND 1.5' VERTICAL SEPARATION SHALL BE PROVIDED BETWEEN WATER AND SEWER. AS DEPICTED IN THIS DETAIL OR SEWER SHALL BE ENCASED IN CONCRETE (SEE CONCRETE ENCASEMENT DETAIL) IN SECTIONS WHERE SEPARATIONS SHALL NOT BE ACHIEVED.

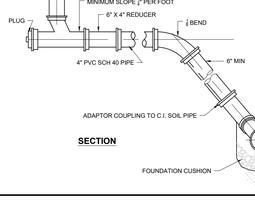
WATER AND SEWER UTILITY CROSSING

NOT TO SCALE (NE-U050101 - 09/2023)

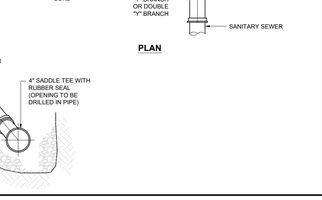


NOTES:
1. INSTALL OFFSET TO MAINTAIN 5'-0" MIN COVER OVER NEW MAIN

WATER SERVICE OR MAIN AT UTILITY CROSSING

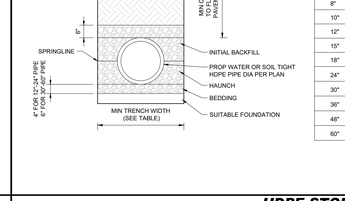


NOT TO SCALE (NE-U050102 - 09/2023)



NOTES:
1. ALL STRUCTURES SHALL BE SUITABLE FOR H-20 LOADING AND SHALL MEET THE REQUIREMENTS OF ASTM C478.
2. CONTRACTOR SHALL SIZE MANHOLE AS NECESSARY TO ACCOMMODATE THE PIPE SIZING AND ORIENTATION USING THE GEOMETRY SHOWN ON THE GRADING AND DRAINAGE PLANS.
3. CONCRETE SHALL BE 4,000 PSI AFTER 28 DAYS
4. REINFORCED STEEL CONFORMS TO ASTM A185 SPEC. 0.12 SQ IN/LINEAL FT AND 0.12 SQ IN (BOTH WAYS) BASE BOTTOM.
5. MANHOLE DESIGN SPECS CONFORM TO ASTM C478 SPEC FOR "PRECAST REINFORCED CONCRETE MANHOLE SECTIONS"

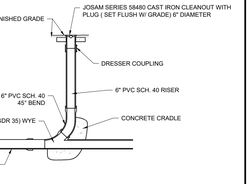
PRECAST CONCRETE STORM DRAIN MANHOLE



NOT TO SCALE (NE-U010101 - 11/2024)

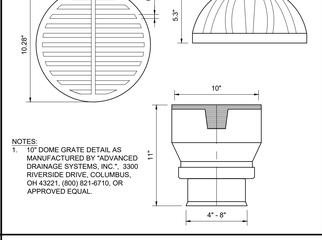
SANITARY MAIN CONNECTION WITH RISER

NOT TO SCALE (NE-U020402 - 09/2023)



RECOMMENDED MINIMUM TRENCH WIDTH	
PIPE DIA	MIN TRENCH WIDTH
6"	23"
8"	26"
10"	28"
12"	30"
15"	34"
18"	39"
24"	48"
30"	56"
36"	64"
48"	80"
60"	96"

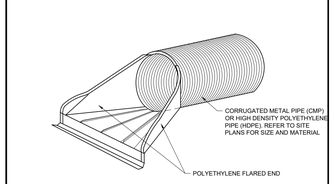
NOTES:
1. ALL PIPE SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH ASTM D2321, "STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PIPE FOR SEWERS AND OTHER GRAVITY FLOW APPLICATIONS", LATEST ADDITION.
2. MEASURES SHOULD BE TAKEN TO PREVENT MIGRATION OF NATIVE FINES INTO BACKFILL MATERIAL, WHEN REQUIRED.
3. FOUNDATION: WHERE THE TRENCH BOTTOM IS UNSTABLE, THE CONTRACTOR SHALL EXCAVATE TO A DEPTH REQUIRED BY THE ENGINEER AND REPLACE WITH SUITABLE MATERIAL AS SPECIFIED BY THE ENGINEER. AS AN ALTERNATIVE AND AT THE DISCRETION OF THE DESIGN ENGINEER, THE TRENCH BOTTOM MAY BE STABILIZED USING A GEOTEXTILE MATERIAL.
4. BEDDING: SUITABLE MATERIAL SHALL BE CLASS I, II OR III. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER. UNLESS OTHERWISE NOTED BY THE ENGINEER, MINIMUM BEDDING THICKNESS SHALL BE 4" (100mm) FOR 4"-24" (100mm-600mm); 6" (150mm) FOR 30"-60" (750mm-900mm).
5. INITIAL BACKFILL: SUITABLE MATERIAL SHALL BE CLASS I, II OR III IN THE PIPE ZONE EXTENDING NOT LESS THAN 6" ABOVE CROWN OF PIPE. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER. MATERIAL SHALL BE INSTALLED AS REQUIRED IN ASTM D2321, LATEST EDITION.
6. MINIMUM COVER: MINIMUM COVER, H, IN NON-TRAFFIC APPLICATIONS (GRASS OR LANDSCAPE AREAS) IS 12" FROM THE TOP OF PIPE TO GROUND SURFACE. ADDITIONAL COVER MAY BE REQUIRED TO PREVENT FLOTATION. FOR TRAFFIC APPLICATIONS, MINIMUM COVER, H, IS 12" UP TO 48" DIAMETER PIPE AND 24" OF COVER FOR 54"-60" DIAMETER PIPE, MEASURED FROM TOP OF PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TO TOP OF RIGID PAVEMENT.



HDPE STORM PIPE TRENCH

NOT TO SCALE (NE-U010812 - 11/2024)

CLEANOUT (IN-LINE)



NOT TO SCALE (NE-U010302 - 11/2024)

NOTES:
1. 10" DOME GRATE DETAIL AS MANUFACTURED BY "ADVANCED DRAINAGE SYSTEMS, INC.", 3300 RIVERSIDE DRIVE, COLUMBUS, OH 43221, (800) 821-6710, OR APPROVED EQUAL.

YARD DRAIN

NOT TO SCALE (NE-U010210 - 09/2023)

NOTES:
1. 12" MINIMUM COVER OVER THE TOP OF THE PIPE, COMPACTED TO A DENSITY OF 90% AS PER AASHTO T-99.

POLYETHYLENE FLARED END SECTION

NOT TO SCALE (NE-U010401 - 09/2023)

THE EDUCATION LAW OF THE STATE OF NEW YORK (SECTION 7209.2) PROHIBITS ANY PERSON FROM ALTERING ANY PERSONAL FILE/REC ANY WAY UNLESS ACCOMPANYING SPECIFICATIONS, ON EXIST IS UNDER THE DIRECTION OF A LICENSED PROFESSIONAL ENGINEER OR LAND SURVEYOR AND HAS AFFIXED HIS/HER SEAL TO THE DRAWINGS. THE PROFESSIONAL ENGINEER MUST SIGN, SEAL, DATE AND DESCRIBE THE FULL EXTENT OF THE ALTERATION ON THE DRAWINGS. VIOLATION OF THIS REGULATION IS AN OFFENSE UNDER SECTION 7209.2

TOWN OF FLORIDA, NEW YORK
LANDSCAPE REQUIREMENTS

SECTION	REQUIREMENT	PROPOSED
§SECTION 15 - WALLS, FENCES AND HEDGES	D. YARD REQUIREMENTS 1. A FENCE, WALL OR HEDGE SHALL BE NO CLOSER THAN TWO (2) FEET FROM THE FRONT LOT LINE, AND SHALL PROVIDE NECESSARY VISIBILITY ON CORNER LOTS. 2. A FENCE, WALL OR HEDGE SHALL BE NO CLOSER THAN TWO (2) FEET FROM ANY SIDE OR REAR YARD PROPERTY LINE, PROVIDING A STRIP OF LAND ON EACH SIDE OF THE PROPERTY LINE FOR ABUTTING PROPERTY OWNERS TO MAINTAIN THEIR FENCE WITHOUT TRESPASSING ON THE LANDS OF THE ABUTTING PROPERTY OWNER.	PROVIDED.
§SECTION 37 - LANDSCAPING REQUIREMENTS	A. WHERE ANY PERMITTED NON-RESIDENTIAL LAND USE, MULTIPLE-FAMILY DEVELOPMENT OR MOBILE HOME PARK ABUTS AN EXISTING RESIDENTIAL PARCEL OR VACANT PARCEL WHERE RESIDENTIAL DEVELOPMENT COULD OCCUR, A STRIP OF LAND AT LEAST 20 FEET WIDE SHALL BE MAINTAINED AS A LANDSCAPED AREA IN THE FRONT, SIDE AND/OR REAR YARD WHICH ADJOIN THESE USES. B. REQUIRED LANDSCAPING SHALL BE INSTALLED AND MAINTAINED IN A HEALTHY GROWING CONDITION AND SHALL TAKE THE FORM OF ANY OR ALL OF THE FOLLOWING: SHADE TREES, DECIDUOUS SHRUBS, EVERGREENS, WELL-KEPT GRASSED AREAS OR GROUND COVER. IN ANY CASE, ALL SUCH LANDSCAPING SHALL BE A MINIMUM OF FOUR (4) FEET IN HEIGHT.	PROVIDED. MIN. 20 FEET LANDSCAPE STRIP WITHIN FRONT YARD

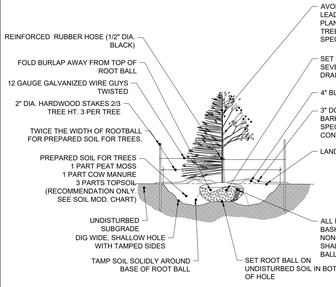
NEW YORK LANDSCAPE SPECIFICATION

1. SCOPE OF WORK:
   a) THE LANDSCAPE CONTRACTOR SHALL BE REQUIRED TO PERFORM ALL CLEARING, FINISHED GRADING, SOIL PREPARATION PERMANENT SEEDING OR SODDING, PLANTING AND MULCHING INCLUDING ALL LABOR, MATERIALS, TOOLS AND EQUIPMENT NECESSARY FOR THE COMPLETION OF THIS PROJECT, UNLESS OTHERWISE CONTRACTED BY THE GENERAL CONTRACTOR.
2. MATERIALS
   a) GENERAL - ALL HARDSCAPE MATERIALS SHALL MEET OR EXCEED SPECIFICATIONS AS OUTLINED IN THE STATE DEPARTMENT OF TRANSPORTATION'S SPECIFICATIONS.
   b) TOPSOIL - NATURAL, FRIABLE, LOAMY SILT SOIL HAVING AN ORGANIC CONTENT NOT LESS THAN 5%, A PH RANGE BETWEEN 4.5-7.0, IT SHALL BE FREE OF DEBRIS, ROCKS LARGER THAN ONE INCH (1"), WOOD, ROOTS, VEGETABLE MATTER AND CLAY CLODS.
   c) LAWN:
      c)a) ALL DISTURBED AREAS ARE TO BE TREATED WITH A MINIMUM 6" THICK LAYER OF TOPSOIL, OR AS DIRECTED BY THE LOCAL ORDINANCE OR CLIENT, AND SEEDED OR SODDED IN ACCORDANCE WITH THE PERMANENT STABILIZATION METHODS INDICATED ON THE LANDSCAPE PLAN.
      c)b) LAWN SEED MIXTURE SHALL BE FRESH, CLEAN NEW CROP SEED.
      c)c) SOD SHALL BE STRONGLY ROOTED, WEED AND DISEASE/PEST FREE WITH A UNIFORM THICKNESS. SOD INSTALLED ON SLOPES GREATER THAN 4:1 SHALL BE PEGGED TO HOLD SOD IN PLACE.
      c)d) MULCH - ALL PLANTING BEDS SHALL BE MULCHED WITH A 3" THICK LAYER OF DOUBLE SHREDDED HARDWOOD BARK MULCH, UNLESS OTHERWISE STATED ON THE LANDSCAPE PLAN AND/OR LANDSCAPE PLAN NOTES / DETAILS.
   d) FERTILIZER:
      d)a) FERTILIZER SHALL BE DELIVERED TO THE SITE MIXED AS SPECIFIED IN THE ORIGINAL UNOPENED STANDARD BAGS SHOWING WEIGHT, ANALYSIS AND NAME OF MANUFACTURER. FERTILIZER SHALL BE STORED IN A WEATHERPROOF PLACE SO THAT IT CAN BE KEPT DRY PRIOR TO USE.
      d)b) FOR THE PURPOSE OF BIDDING, ASSUME THAT FERTILIZER SHALL BE 10% NITROGEN, 6% PHOSPHORUS AND 4% POTASSIUM BY WEIGHT. A FERTILIZER SHOULD NOT BE SELECTED WITHOUT A SOIL TEST PERFORMED BY A CERTIFIED SOIL LABORATORY. CONTRACTOR TO ADHERE TO STATE REGULATIONS REGARDING APPLICATION OF FERTILIZERS.
   e) PLANT MATERIAL:
      e)a) ALL PLANTS SHALL IN ALL CASES CONFORM TO THE REQUIREMENTS OF THE "AMERICAN STANDARD FOR NURSERY STOCK" (ANSI Z60.1). LATEST EDITION, AS PUBLISHED BY THE AMERICAN NURSERY & LANDSCAPE ASSOCIATION (FORMERLY THE AMERICAN ASSOCIATION OF NURSERYMEN).
      e)b) IN ALL CASES, BOTANICAL NAMES SHALL TAKE PRECEDENCE OVER COMMON NAMES FOR ANY AND ALL PLANT MATERIAL.
      e)c) PLANTS SHALL BE LEGIBLY TAGGED WITH THE PROPER NAME AND SIZE. TAGS ARE TO REMAIN ON AT LEAST ONE PLANT OF EACH SPECIES FOR VERIFICATION PURPOSES DURING THE FINAL INSPECTION.
      e)d) TREES WITH ABRASION OF THE BARK, SUN SCALDS, DISFIGURATION OR FRESH CUTS OF LIMBS OVER 1½", WHICH HAVE NOT BEEN COMPLETELY CALLUSED, SHALL BE REJECTED. PLANTS SHALL NOT BE BOUND WITH WIRE OR ROPE AT ANY TIME SO AS TO DAMAGE THE BARK OR BREAK BRANCHES.
      e)e) ALL PLANTS SHALL BE TYPICAL OF THEIR SPECIES OR VARIETY AND SHALL HAVE A NORMAL HABIT OF GROWTH. WELL DEVELOPED BRANCHES, DENSELY FOLIATED, VIGOROUS ROOT SYSTEMS AND BE FREE OF DISEASE, INSECTS, PESTS, EGGS OR LARVAE.
      e)f) CALIPER MEASUREMENTS OF NURSERY GROWN TREES SHALL BE TAKEN AT A POINT ON THE TRUNK SIX INCHES (6") ABOVE THE NATURAL GRADE FOR TREES UP TO AND INCLUDING A FOUR INCH (4") CALIPER SIZE. IF THE CALIPER AT SIX INCHES (6") ABOVE THE GROUND EXCEEDS FOUR INCHES (4") IN CALIPER, THE CALIPER SHOULD BE MEASURED AT A POINT 12" ABOVE THE NATURAL GRADE.
      e)g) SHRUBS SHALL BE MEASURED TO THE AVERAGE HEIGHT OR SPREAD OF THE SHRUB, AND NOT TO THE LONGEST BRANCH.
      e)h) TREES AND SHRUBS SHALL BE HANDLED WITH CARE BY THE ROOT BALL.
3. GENERAL WORK PROCEDURES
   a) CONTRACTOR TO UTILIZE WORKMANLIKE INDUSTRY STANDARDS IN PERFORMING ALL LANDSCAPE CONSTRUCTION. THE SITE IS TO BE LEFT IN A CLEAN STATE AT THE END OF EACH WORKDAY. ALL DEBRIS, MATERIALS AND TOOLS SHALL BE PROPERLY STORED, STOCKPILED OR DISPOSED OF.
   b) WASTE MATERIALS AND DEBRIS SHALL BE COMPLETELY DISPOSED OF AT THE CONTRACTOR'S EXPENSE. DEBRIS SHALL NOT BE BURIED, INCLUDING ORGANIC MATERIALS, BUT SHALL BE REMOVED COMPLETELY FROM THE SITE.
4. SITE PREPARATIONS
   a) BEFORE AND DURING PRELIMINARY GRADING AND FINISHED GRADING, ALL WEEDS AND GRASSES SHALL BE DUG OUT BY THE ROOTS AND DISPOSED OF IN ACCORDANCE WITH GENERAL WORK PROCEDURES OUTLINED HEREIN.
   b) ALL EXISTING TREES TO REMAIN SHALL BE PRUNED TO REMOVE ANY DAMAGED BRANCHES. THE ENTIRE LIMB OF ANY DAMAGED BRANCH SHALL BE CUT OFF AT THE BRANCH COLLAR. CONTRACTOR SHALL ENSURE THAT CUTS ARE SMOOTH AND STRAIGHT. ANY EXPOSED ROOTS SHALL BE CUT BACK WITH CLEAN, SHARP TOOLS AND TOPSOIL SHALL BE PLACED AROUND THE REMAINDER OF THE ROOTS. EXISTING TREES SHALL BE MONITORED ON A REGULAR BASIS FOR ADDITIONAL ROOT OR BRANCH DAMAGE AS A RESULT OF CONSTRUCTION. ROOTS SHALL NOT BE LEFT EXPOSED FOR MORE THAN ONE (1) DAY. CONTRACTOR SHALL WATER EXISTING TREES AS NEEDED TO PREVENT SHOCK OR DECLINE.
   c) CONTRACTOR SHALL ARRANGE TO HAVE A UTILITY STAKE-OUT TO LOCATE ALL UNDERGROUND UTILITIES PRIOR TO INSTALLATION OF ANY LANDSCAPE MATERIAL. UTILITY COMPANIES SHALL BE CONTACTED THREE (3) DAYS PRIOR TO THE BEGINNING OF WORK.
5. TREE PROTECTION
   a) CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING TREES TO REMAIN. A TREE PROTECTION ZONE SHALL BE ESTABLISHED AT THE DRIP LINE OR AT THE LIMIT OF CONSTRUCTION DISTURBANCE, WHICHEVER IS GREATER. LOCAL STANDARDS THAT MAY REQUIRE A MORE STRICT TREE PROTECTION ZONE SHALL BE HONORED.
   b) A FORTY-EIGHT INCH (48") HIGH WOODEN SNOW FENCE OR ORANGE COLORED HIGH-DENSITY 'VISI-FENCE', OR APPROVED EQUAL MOUNTED ON STEEL POSTS SHALL BE PLACED ALONG THE BOUNDARY OF THE TREE PROTECTION ZONE. POSTS SHALL BE LOCATED AT A MAXIMUM OF EIGHT FEET (8') ON CENTER OR AS INDICATED WITHIN THE TREE PROTECTION DETAIL.
   c) WHEN THE TREE PROTECTION FENCING HAS BEEN INSTALLED, IT SHALL BE INSPECTED BY THE APPROVING AGENCY PRIOR TO DEMOLITION, GRADING, TREE CLEARING OR ANY OTHER CONSTRUCTION. THE FENCING ALONG THE TREE PROTECTION ZONE SHALL BE REGULARLY INSPECTED BY THE LANDSCAPE CONTRACTOR AND MAINTAINED UNTIL ALL CONSTRUCTION ACTIVITY HAS BEEN COMPLETED.
   d) AT NO TIME SHALL MACHINERY, DEBRIS, FALLEN TREES OR OTHER MATERIALS BE PLACED, STOCKPILED OR LEFT STANDING IN THE TREE PROTECTION ZONE.
6. SOIL MODIFICATIONS
   a) CONTRACTOR SHALL ATTAIN A SOIL TEST FOR ALL AREAS OF THE SITE PRIOR TO CONDUCTING ANY PLANTING. SOIL TESTS SHALL BE PERFORMED BY A CERTIFIED SOIL LABORATORY.
   b) LANDSCAPE CONTRACTOR SHALL REPORT ANY SOIL OR DRAINAGE CONDITIONS CONSIDERED DETRIMENTAL TO THE GROWTH OF PLANT MATERIAL MAY NEED TO BE CONDUCTED BY THE LANDSCAPE CONTRACTOR DEPENDING ON SITE CONDITIONS.
   c) THE FOLLOWING AMENDMENTS AND QUANTITIES ARE APPROXIMATE AND ARE FOR BIDDING PURPOSES ONLY. COMPOSITION OF AMENDMENTS SHOULD BE REVISED DEPENDING ON THE OUTCOME OF A TOPSOIL ANALYSIS PERFORMED BY A CERTIFIED SOIL LABORATORY.
   d) TO INCREASE A SANDY SOIL'S ABILITY TO RETAIN WATER AND NUTRIENTS, THOROUGHLY TILL ORGANIC MATTER INTO THE TOP 6-12". USE COMPOSTED BARK, COMPOSTED LEAF MULCH OR PEAT MOSS. ALL PRODUCTS SHOULD BE COMPOSTED TO A DARK COLOR AND BE FREE OF PIECES WITH IDENTIFIABLE LEAF OR WOOD STRUCTURE. AVOID MATERIAL WITH A PH HIGHER THAN 7.5.
      d)a) TO INCREASE DRAINAGE: MODIFY HEAVY CLAY OR SILT (MORE THAN 40% CLAY OR SILT) BY ADDING COMPOSTED PINE BARK (UP TO 30% BY VOLUME) AND/OR AGRICULTURAL GYPSUM. COARSE SAND MAY BE USED IF ENOUGH IS ADDED TO BRING THE SAND CONTENT TO MORE THAN 60% OF THE TOTAL MIX. SUBSURFACE DRAINAGE LINES MAY NEED TO BE ADDED TO INCREASE DRAINAGE.
      d)b) MODIFY EXTREMELY SANDY SOILS (MORE THAN 85%) BY ADDING ORGANIC MATTER AND/OR DRY, SHREDDED CLAY LOAM UP TO 30% OF THE TOTAL MIX.
7. FINISHED GRADING
   a) UNLESS OTHERWISE CONTRACTED, THE LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR THE INSTALLATION OF TOPSOIL AND THE ESTABLISHMENT OF FINE-GRADING WITHIN THE DISTURBANCE AREA OF THE SITE.
   b) LANDSCAPE CONTRACTOR SHALL VERIFY THAT SUBGRADE FOR INSTALLATION OF TOPSOIL HAS BEEN ESTABLISHED. THE SUBGRADE OF THE SITE MUST MEET THE FINISHED GRADE LESS THE REQUIRED TOPSOIL THICKNESS (1").
   c) ALL LAWN AND PLANTING AREAS SHALL BE GRADED TO A SMOOTH, EVEN AND UNIFORM PLANE WITH NO ABRUPT CHANGE OF SURFACE AS DEPICTED WITHIN THIS SET OF CONSTRUCTION PLANS, UNLESS OTHERWISE DIRECTED BY THE PROJECT ENGINEER OR LANDSCAPE ARCHITECT.
   d) ALL PLANTING AREAS SHALL BE GRADED AND MAINTAINED TO ALLOW FREE FLOW OF SURFACE WATER IN AND AROUND THE PLANTING BEDS. STANDING WATER SHALL NOT BE PERMITTED IN PLANTING BEDS.
8. TOPSOILING
   a) CONTRACTOR SHALL PROVIDE A 6" THICK MINIMUM LAYER OF TOPSOIL, OR AS DIRECTED BY THE LOCAL ORDINANCE OR CLIENT, IN ALL PLANTING AREAS. TOPSOIL SHOULD BE SPREAD OVER A PREPARED SURFACE IN A UNIFORM LAYER TO ACHIEVE THE DESIRED COMPACTED THICKNESS.
   b) ON-SITE TOPSOIL MAY BE USED TO SUPPLEMENT THE TOTAL AMOUNT REQUIRED. TOPSOIL FROM THE SITE MAY BE REJECTED IF IT HAS NOT BEEN PROPERLY REMOVED, STORED AND PROTECTED PRIOR TO CONSTRUCTION.
   c) CONTRACTOR SHALL FURNISH TO THE APPROVING AGENCY AN ANALYSIS OF BOTH IMPORTED AND ON-SITE TOPSOIL TO BE UTILIZED IN ALL PLANTING AREAS. THE PH AND NUTRIENT LEVELS MAY NEED TO BE ADJUSTED THROUGH SOIL MODIFICATIONS AS NEEDED TO ACHIEVE THE REQUIRED LEVELS AS SPECIFIED IN THE MATERIALS SECTION ABOVE.
   d) ALL LAWN AREAS ARE TO BE CULTIVATED TO A DEPTH OF SIX INCHES (6"). ALL DEBRIS EXPOSED FROM EXCAVATION AND CULTIVATION SHALL BE DISPOSED OF IN ACCORDANCE WITH GENERAL WORK PROCEDURES SECTION ABOVE. THE FOLLOWING SHALL BE TILLED INTO THE TOP FOUR INCHES (4") IN TWO DIRECTIONS (QUANTITIES BASED ON A 1,000 SQUARE FOOT AREA - FOR BID PURPOSES ONLY [SEE SPECIFICATION 6.A.]):
      d)a) 20 POUNDS 'GRO-POWER' OR APPROVED SOIL CONDITIONER/FERTILIZER
      d)b) 20 POUNDS NITRO-FORM (COURSE) 38-0-0 BLUE CHIP OR APPROVED NITROGEN FERTILIZER
   e) THE SPREADING OF TOPSOIL SHALL NOT BE CONDUCTED UNDER MUDDY OR FROZEN CONDITIONS.
9. PLANTING
   a) INSOFAR THAT IT IS FEASIBLE, PLANT MATERIAL SHALL BE PLANTED ON THE DAY OF DELIVERY. IN THE EVENT THAT THIS IS NOT POSSIBLE, LANDSCAPE CONTRACTOR SHALL PROTECT UNINSTALLED PLANT MATERIAL. PLANTS SHALL NOT REMAIN UNPLANTED FOR LONGER THAN A THREE DAY PERIOD AFTER DELIVERY. PLANTS THAT WILL NOT BE PLANTED FOR A PERIOD OF TIME GREATER THAN THREE DAYS SHALL BE HEALED IN WITH TOPSOIL OR MULCH TO HELP PRESERVE ROOT MOISTURE.
   b) PLANTING OPERATIONS SHALL BE PERFORMED DURING PERIODS WITHIN THE PLANTING SEASON WHEN WEATHER AND SOIL CONDITIONS ARE SUITABLE AND IN ACCORDANCE WITH ACCEPTED LOCAL PRACTICE. PLANTS SHALL NOT BE INSTALLED IN TOPSOIL THAT IS IN A MUDDY OR FROZEN CONDITION.
   c) ANY INJURED ROOTS OR BRANCHES SHALL BE PRUNED TO MAKE CLEAN-CUT ENDS PRIOR TO PLANTING UTILIZING CLEAN, SHARP TOOLS. ONLY INJURED OR DISEASED BRANCHING SHALL BE REMOVED.
   d) ALL PLANTING CONTAINERS, BASKETS AND NON-BIODEGRADABLE MATERIALS SHALL BE REMOVED FROM ROOT BALLS DURING PLANTING. NATURAL FIBER BURLAP MUST BE CUT FROM AROUND THE TRUNK OF THE TREE AND FOLDED DOWN AGAINST THE ROOT BALL PRIOR TO BACKFILLING.
   e) POSITION TREES AND SHRUBS AT THEIR INTENDED LOCATIONS AS PER THE PLANS AND SECURE THE APPROVAL OF THE LANDSCAPE ARCHITECT PRIOR TO EXCAVATING PITS, MAKING NECESSARY ADJUSTMENTS AS DIRECTED.
   f) PRIOR TO THE ISSUANCE OF ANY CERTIFICATE OF OCCUPANCY, THE PROPOSED LANDSCAPE, AS SHOWN ON THE APPROVED LANDSCAPE PLAN, MUST BE INSTALLED, INSPECTED AND APPROVED BY THE APPROVING AGENCY. THE APPROVING AGENCY SHALL TAKE INTO ACCOUNT SEASONAL CONSIDERATIONS IN THIS REGARD AS FOLLOWS. THE PLANTING OF TREES, SHRUBS, VINES OR GROUND COVER SHALL OCCUR ONLY DURING THE FOLLOWING PLANTING SEASONS:
      f)a) PLANTS: MARCH 15 TO DECEMBER 15
      f)b) LAWN: MARCH 15 TO JUNE 15 OR SEPT. 1 TO DECEMBER 1
      f)c) PLANTINGS REQUIRED FOR A CERTIFICATE OF OCCUPANCY SHALL BE PROVIDED DURING THE NEXT APPROPRIATE SEASON AT THE MUNICIPALITY'S DISCRETION. CONTRACTOR SHOULD CONTACT APPROVING AGENCY FOR POTENTIAL SUBSTITUTIONS.
   g) FURTHERMORE, THE FOLLOWING TREE VARIETIES ARE UNUSUALLY SUSCEPTIBLE TO WINTER DAMAGE. WITH TRANSPLANT SHOCK AND THE SEASONAL LACK OF NITROGEN AVAILABILITY. THE RISK OF PLANT DEATH IS GREATLY INCREASED. IT IS NOT RECOMMENDED THAT THESE SPECIES BE PLANTED DURING THE FALL PLANTING SEASON:

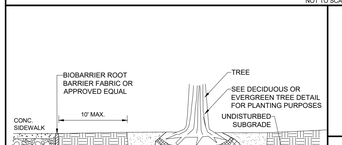


ACER RUBRUM	PLATANUS X ACERIFOLIA
BETULA VARIETIES	POPULUS VARIETIES
CARPINUS VARIETIES	PRUNUS VARIETIES
CRATAEGUS VARIETIES	PYRUS VARIETIES
KOELREUTERIA	QUERCUS VARIETIES
LIQUIDAMBAR STYRACIFLUA	TILIA TOMENTOSA
LIRIODENDRON TULIPIFERA	ZELKOVA VARIETIES

   h) PLANTING PITS SHALL BE DUG WITH LEVEL BOTTOMS, WITH THE WIDTH TWICE THE DIAMETER OF ROOT BALL. THE ROOT BALL SHALL REST ON UNDISTURBED GRADE. EACH PLANT PIT SHALL BE BACKFILLED IN LAYERS WITH THE FOLLOWING PREPARED SOIL MIXED THOROUGHLY:
      h)a) 1 PART PEAT MOSS
      h)b) 1 PART COMPOSTED COW MANURE BY VOLUME
      h)c) 3 PARTS TOPSOIL BY VOLUME
      h)d) 21 GRAMS AGRIFORM PLANTING TABLETS (OR APPROVED EQUAL) AS FOLLOWS:
         h)d)a) 2 TABLETS PER 1 GALLON PLANT
         h)d)b) 3 TABLETS PER 5 GALLON PLANT
         h)d)c) 4 TABLETS PER 15 GALLON PLANT
         h)d)d) LARGER PLANTS: 2 TABLETS PER ½" CALIPER OF TRUNK.
   i) FILL PREPARED SOIL AROUND BALL OF PLANT HALF-WAY AND INSERT PLANT TABLETS. COMPLETE BACKFILL AND WATER THOROUGHLY.
   j) ALL PLANTS SHALL BE PLANTED SO THAT THE TOP OF THE ROOT BALL, THE POINT AT WHICH THE ROOT FLARE BEGINS, IS SET AT GROUND LEVEL AND IN THE CENTER OF THE PIT. NO SOIL IS TO BE PLACED DIRECTLY ON TOP OF THE ROOT BALL.
   k) ALL PROPOSED TREES DIRECTLY ADJACENT TO WALKWAYS OR DRIVEWAYS SHALL BE PRUNED AND MAINTAINED TO A MINIMUM BRANCHING HEIGHT OF 7' FROM GRADE.
   l) GROUND COVER AREAS SHALL RECEIVE A ½" LAYER OF HUMUS RAKED INTO THE TOP 1" OF PREPARED SOIL PRIOR TO PLANTING. ALL GROUND COVER AREAS SHALL BE WEEDED AND TREATED WITH A PRE-EMERGENT CHEMICAL AS PER MANUFACTURER'S RECOMMENDATION.
   m) NO PLANT, EXCEPT GROUND COVERS, GRASSES OR VINES, SHALL BE PLANTED LESS THAN TWO FEET (2') FROM EXISTING STRUCTURES AND SIDEWALKS.
   n) ALL PLANTING AREAS AND PLANTING PITS SHALL BE MULCHED AS SPECIFIED HEREIN TO FILL THE ENTIRE BED AREA OR SAUCER. NO MULCH IS TO TOUCH THE TRUNK OF THE TREE OR SHRUB.
   o) ALL PLANTING AREAS SHALL BE WATERED IMMEDIATELY UPON INSTALLATION IN ACCORDANCE WITH THE WATERING SPECIFICATIONS AS LISTED HEREIN.
10. TRANSPLANTING (WHEN REQUIRED)
   a) ALL TRANSPLANTS SHALL BE DUG WITH INTACT ROOT BALLS CAPABLE OF SUSTAINING THE PLANT.
   b) IF PLANTS ARE TO BE STOCKPILED BEFORE REPLANTING, THEY SHALL BE HEALED IN WITH MULCH OR SOIL, ADEQUATELY WATERED AND PROTECTED FROM EXTREME HEAT, SUN AND WIND.
   c) PLANTS SHALL NOT BE DUG FOR TRANSPLANTING BETWEEN APRIL 10 AND JUNE 30.
   d) UPON REPLANTING, BACKFILL SOIL SHALL BE AMENDED WITH FERTILIZER AND ROOT GROWTH HORMONE.
   e) TRANSPLANTS SHALL BE GUARANTEED FOR THE LENGTH OF THE GUARANTEE PERIOD SPECIFIED HEREIN.
   f) IF TRANSPLANTS DIE, SHRUBS AND TREES LESS THAN SIX INCHES (6") DBH SHALL BE REPLACED IN KIND. TREES GREATER THAN SIX INCHES (6") DBH MAY BE REQUIRED TO BE REPLACED IN ACCORDANCE WITH THE MUNICIPALITY'S TREE REPLACEMENT GUIDELINES.
11. WATERING
   a) NEW PLANTINGS OR LAWN AREAS SHALL BE ADEQUATELY IRRIGATED BEGINNING IMMEDIATELY AFTER PLANTING. WATER SHALL BE APPLIED TO EACH TREE AND SHRUB IN SUCH MANNER AS NOT TO DISTURB BACKFILL AND TO THE EXTENT THAT ALL MATERIALS IN THE PLANTING HOLE ARE THOROUGHLY SATURATED. WATERING SHALL CONTINUE AT LEAST UNTIL PLANTS ARE ESTABLISHED.
   b) SITE OWNER SHALL PROVIDE WATER IF AVAILABLE ON SITE AT TIME OF PLANTING. IF WATER IS NOT AVAILABLE ON SITE, CONTRACTOR SHALL SUPPLY ALL NECESSARY WATER. THE USE OF WATERING BAGS IS RECOMMENDED FOR ALL NEWLY PLANTED TREES.
   c) IF AN IRRIGATION SYSTEM HAS BEEN INSTALLED ON THE SITE, IT SHALL BE USED TO WATER PROPOSED PLANT MATERIAL, BUT ANY FAILURE OF THE SYSTEM DOES NOT ELIMINATE THE CONTRACTOR'S RESPONSIBILITY OF MAINTAINING THE DESIRED MOISTURE LEVEL FOR VIGOROUS, HEALTHY GROWTH.
12. GUARANTEE
   a) THE LANDSCAPE CONTRACTOR SHALL GUARANTEE ALL PLANTS FOR A PERIOD OF 1 YEAR FROM APPROVAL OF LANDSCAPE INSTALLATION BY THE APPROVING AGENCY. CONTRACTOR SHALL SUPPLY THE OWNER WITH A MAINTENANCE BOND FOR TEN PERCENT (10%) OF THE VALUE OF THE LANDSCAPE INSTALLATION WHICH WILL BE RELEASED AT THE CONCLUSION OF THE GUARANTEE PERIOD AND WHEN A FINAL INSPECTION HAS BEEN COMPLETED AND APPROVED BY THE OWNER OR AUTHORIZED REPRESENTATIVE.
   b) ANY DEAD OR DYING PLANT MATERIAL SHALL BE REPLACED FOR THE LENGTH OF THE GUARANTEE PERIOD. REPLACEMENT OF PLANT MATERIAL SHALL BE CONDUCTED AT THE FIRST SUCCEEDING PLANTING SEASON. ANY DEBRIS SHALL BE DISPOSED OF OFF-SITE, WITHOUT EXCEPTION.
   c) TREES AND SHRUBS SHALL BE MAINTAINED BY THE CONTRACTOR DURING CONSTRUCTION AND THROUGHOUT THE 90 DAY MAINTENANCE PERIOD AS SPECIFIED HEREIN. CULTIVATION, WEEDING, WATERING AND THE PREVENTATIVE TREATMENTS SHALL BE PERFORMED AS NECESSARY TO KEEP PLANT MATERIAL IN GOOD CONDITION AND FREE OF INSECTS AND DISEASE.
   d) LAWNS SHALL BE MAINTAINED THROUGH WATERING, FERTILIZING, WEEDING, MOWING, TRIMMING AND OTHER OPERATIONS SUCH AS ROLLING, REGARDING AND REPLANTING AS REQUIRED TO ESTABLISH A SMOOTH, ACCEPTABLE LAWN, FREE OF ERODED OR BARE AREAS.
13. CLEANUP
   a) UPON THE COMPLETION OF ALL LANDSCAPE INSTALLATION AND BEFORE THE FINAL ACCEPTANCE, THE CONTRACTOR SHALL REMOVE ALL UNUSED MATERIALS, EQUIPMENT AND DEBRIS FROM THE SITE. ALL PAVED AREAS ARE TO BE CLEANED.
   b) THE SITE SHALL BE CLEANED AND LEFT IN A NEAT AND ACCEPTABLE CONDITION AS APPROVED BY THE OWNER OR AUTHORIZED REPRESENTATIVE.
14. MAINTENANCE (ALTERNATIVE BID):
   a) A 90 DAY MAINTENANCE PERIOD SHALL COMMENCE AT THE END OF ALL LANDSCAPE INSTALLATION OPERATIONS. THE 90 DAY MAINTENANCE PERIOD ENSURES TO THE OWNER/OPERATOR THAT THE NEWLY INSTALLED LANDSCAPING HAS BEEN MAINTAINED AS SPECIFIED ON THE APPROVED LANDSCAPE PLAN. ONCE THE INITIAL 90 DAY MAINTENANCE PERIOD HAS EXPIRED, THE OWNER/OPERATOR MAY REQUEST THAT BIDDERS SUBMIT AN ALTERNATE MAINTENANCE BID FOR A MONTHLY MAINTENANCE CONTRACT. THE ALTERNATE MAINTENANCE CONTRACT WILL ENCOMPASS ANY WORK THAT IS CONSIDERED APPROPRIATE TO ENSURE THAT PLANT AND LAWN AREAS ARE HEALTHY AND MANICURED TO THE APPROVAL OF THE OWNER/OPERATOR.

THE EDUCATION LAW OF THE STATE OF NEW YORK PROHIBITS ANY PERSON AS TERMS ANYTHING ON THESE DRAWINGS UNDER THE SUPERVISION OF A LICENSED PROFESSIONAL ENGINEER OR LICENSED PROFESSIONAL ENGINEER, UNDER SUCH ALTERATIONS AND SHALL AFFIX TO ANY ALTERED DOCUMENT THE SEAL OF THE ENGINEER DESCRIBE THE FULL EXTENT OF THE ALTERATION ON THE DRAWINGS AND/OR IN THE SPECIFICATIONS. (NYS EDUCATION LAW SECTION 7209).

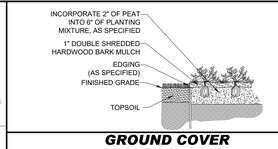
TREE PLANTING



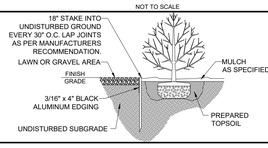
NOT TO SCALE

NOTES:
1. NO SOIL OR MULCH SHALL BE PLACED AGAINST ROOT COLLAR OF PLANT.
2. REMOVE ALL NON-BIODEGRADABLE MATERIAL AND ROPE FROM TRUNK & TOP OF ROOT BALL. FOLD BURLAP BACK 1/3 FROM ROOT BALL.
3. PLANTING DEPTH SHALL BE THE SAME AS GROWN IN NURSERY.
4. THOROUGHLY SOAK THE TREE ROOT BALL AND ADJACENT PREPARED SOIL SEVERAL TIMES DURING THE FIRST MONTH AFTER PLANTING AND REGULARLY THROUGHOUT THE FOLLOWING TWO SUMMERS.
5. THE BOTTOM OF PLANTING PIT EXCAVATIONS SHOULD BE ROUGH TO AVOID MATTING OF SOIL LAYERS AS NEW SOIL IS ADDED. IT IS PREFERABLE TO TILL THE FIRST LIFT (2 TO 3 IN.) OF PLANTING SOIL INTO THE SUBSOIL.

SHRUB PLANTING

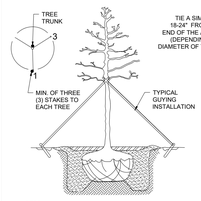


NOT TO SCALE



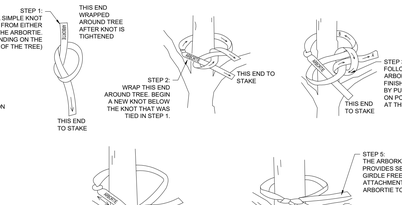
NOTES:
1. ANY TREE INSTALLED WITHIN 10 FT. OF NEW CONCRETE SIDEWALKS SHOULD BE INSTALLED WITH BIOBARRIER ROOT BARRIER FABRIC AS SHOWN.
2. TREES SHALL BE INSTALLED ACCORDING TO THE APPROPRIATE PLANTING DETAIL.

GROUND COVER PLANTING



NOT TO SCALE

BIOBARRIER ROOT BARRIER

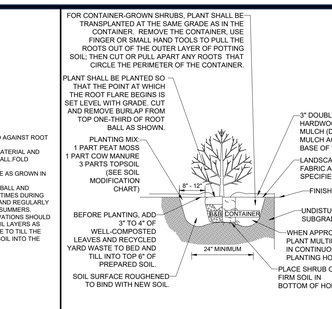


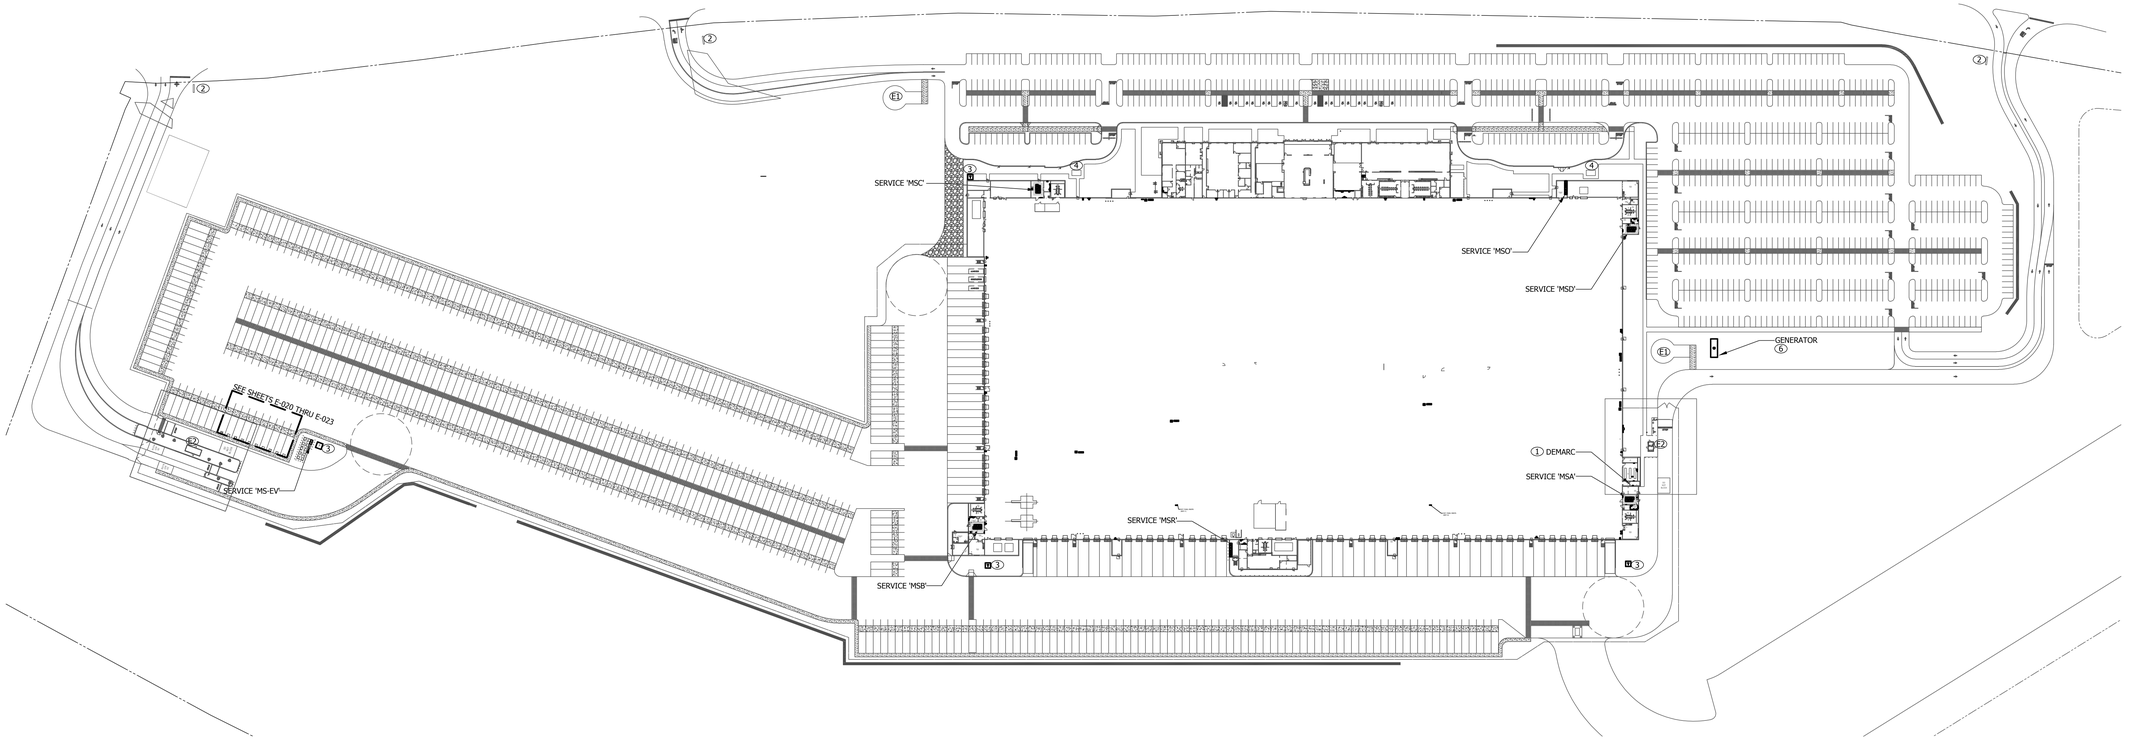
NOT TO SCALE

NOTES:
1. SPECIFIED ARBORTIE GREEN (OR WHITE) STAKING AND GUYING MATERIAL IS TO BE FLAT WOVEN POLYPROPYLENE MATERIAL, 3/4" WIDE, 600 LB. BREAK STRENGTH. ARBORTIE SHALL BE FASTENED TO STAKES IN A MANNER WHICH PERMITS TREE MOVEMENT AND SUPPORTS THE TREE.

BLACK ALUMINUM EDGING

NOT TO SCALE





ARBORTIE STAKING

NOT TO SCALE

TREE PLANTING ON SLOPE

NOT TO SCALE

FOR CONTAINER-GROWN SHRUBS, PLANT SHALL BE TRANSPLANTED AT THE SAME GRADE AS IN THE CONTAINER. REMOVE THE CONTAINER, USE FINGER OR SMALL HAND TOOLS TO PULL THE ROOTS OUT OF THE OUTER LAYER OF POTTING SOIL; THEN CUT OR PULL APART ANY ROOTS THAT CIRCLE THE PERIMETER OF THE CONTAINER.
PLANT SHALL BE PLANTED SO THAT THE POINT AT WHICH THE ROOT FLARE BEGINS IS SET LEVEL WITH GRADE. CUT AND REMOVE BURLAP FROM TOP ONE-THIRD OF ROOT BALL AS SHOWN.
PLANTING MIX
1 PART PEAT MOSS
1 PART COW MANURE
3 PARTS TOPSOIL
(SEE SOIL MODIFICATION CHART)
6" - 12"
MIN. CONTAINER
BEFORE PLANTING, ADD 3" TO 4" OF WELL-COMPOSTED LEAVES AND RECYCLED YARD WASTE TO BED AND TILL INTO TOP 6" OF PREPARED SOIL.
SOIL SURFACE ROUGHENED TO BIND WITH NEW SOIL.
24" MINIMUM
3" DOUBLE-S

SITE POWER PLAN

1"=100'-0"

NOTES:

1. CURRENT SCOPE RELATED TO THE TRUCK YARD ELECTRIC VEHICLE AREA IS TO PROVIDE A COMPLETE ELECTRICAL INSTALLATION FOR THE TRUCK YARD ELECTRIC VEHICLE CHARGING EQUIPMENT INCLUDING ELECTRICAL DISTRIBUTION EQUIPMENT, POWER AND AUXILIARY CABLING TO EACH TRUCK YARD EV PARKING SPACE, AND EV CHARGING EQUIPMENT.

A. PROVIDE ALL UNDERGROUND RACEWAYS, POWER AND AUXILIARY WIRING, ELECTRICAL DISTRIBUTION EQUIPMENT, COMMUNICATIONS HUB, EV CHARGING EQUIPMENT AND UTILITY OR BUILDING POWER AS DEFINED IN THESE DOCUMENTS.

B. PROVIDE ALL EV CHARGING EQUIPMENT. FOR THE TRUCK SPACES TO BE PART OF THE INITIAL INSTALLATION. COORDINATE PROCUREMENT OF CHARGING EQUIPMENT WITH EV FLEET TEAM. CURRENT APPROVED MANUFACTURERS ARE:
   1. BTC POWER MODEL EVPC-150-2-480V-3-65
   2. ABB HVC-150C

2. ONLY A SELECT QUANTITY OF TRUCK YARD PARKING SPACES ARE TO BE FITTED FOR FUTURE EV CHARGING. THESE ARE INTENDED TO BE FOR EV YARD HOSTLER (EYH), EV BOX TRUCK (EBT) AND EV DAY CAB (EDC) . INITIAL INSTALLATION IS TO INCLUDE A MINIMUM OF TWO (2) EV CHARGERS WITH PROVISIONS TO SUPPORT UP TO EIGHT (8) ADDITIONAL CHARGERS IN THE FUTURE (10 TOTAL).
   1. THE MINIMUM OF TWO INITIAL CHARGER LOCATIONS SHALL HAVE ALL UNDERGROUND RACEWAYS, WIRING AND EV EQUIPMENT INSTALLED.
   2. THE UP TO EIGHT (8) FUTURE CHARGER LOCATIONS SHALL HAVE ONLY THE UNDERGROUND 480V , 120V AND AUXILIARY RACEWAYS (WITH PULL WIRE) INSTALLED CAPPED FLUSH WITH GRADE (SEE FUTURE CHARGER STATION CONDUIT TERMINATION DETAIL).

3. REFER TO EV DISTRIBUTION DIAGRAM DETAIL FOR TYPICAL RACEWAY SIZING REQUIREMENTS.

4. ALL PULLBOXES ARE TO BE LOCATED IN LANDSCAPED AREAS OR CONCRETE STRIP BEHIND TRUCK STALLS. INTENT IS FOR THESE NOT TO HAVE TO BE RATED FOR TRAFFIC DUTY. IF THE PULLBOXES MUST BE LOCATED IN TRAFFIC AREAS, TRAFFIC RATED PULLBOXES AND COVERS ARE REQUIRED.

5. LOW VOLTAGE SWITCHBOARD AND UTILITY PAD MOUNTED TRANSFORMER ARE TO BE LOCATED IN LANDSCAPED AREAS. THIS EQUIPMENT IS TO BE LOCATED IN ISLAND AREAS SURROUNDED BY A 12" TALL CONCRETE CURB (FROM TRUCK COURT PAVING). COORDINATE ALL REQUIREMENTS RELATED TO UTILITY PAD MOUNTED TRANSFORMER WITH UTILITY PROVIDER.

6. PROPOSED CONDUIT INFRASTRUCTURE DESIGN IS BASED ON ELECTRICAL EQUIPMENT TO SUPPORT A MAXIMUM OF 150KW PER TRUCK YARD EV PARKING SPACE. INTENT IS FOR ACTUAL INSTALLED TRUCK YARD EV CHARGING EQUIPMENT TO HAVE LOAD MANAGEMENT CAPABILITIES TO REDUCE LOAD AND LIMIT LOAD PROFILE. REFER TO UTILITY COORDINATION NOTE D.

7. COORDINATE UTILITY SERVICE REQUIREMENTS WITH UTILITY PROVIDER. PROVIDE ALL REQUIRED UNDERGROUND PRIMARY SERVICE RACEWAYS UNDER THIS SCOPE SO THAT CURRENT OR FUTURE DEPLOYMENT OF TRUCK YARD EV CHARGING EQUIPMENT CAN BE ACCOMPLISHED WITHOUT THE NEED TO DIG ANY TRENCHES OR DISRUPT TRUCK YARD OPERATIONS.

8. DO NOT LOCATE TRUCK YARD ELECTRIC VEHICLE CHARGING STATIONS SUCH THAT THEY BLOCK PEDESTRIAN WALKWAYS BEHIND TRUCK TRAILERS.

9. PROVIDE RACEWAY SYSTEM AND WIRING FOR TRUCK YARD EV CHARGING AUXILIARY/COMMUNICATIONS TO BE RUN TO CENTRALLY LOCATED HUB AND THEN TO THE BUILDING DEMARC ROOM.

10. INSTALLATION SHALL BE IN CONFORMANCE WITH ALL LOCALLY ADOPTED CODES, ORDINANCES AND REQUIREMENTS.

ELECTRICAL BOX NOTES:

BOX SHALL BE RATED TIER8 (ANSI/SCTE 77) FOR USE IN LANDSCAPE AREAS NOT SUBJECT TO VEHICULAR TRAFFIC, OR RATED TIER22 FOR USE IN SIDEWALKS. DO NOT LOCATE IN TRUCK COURT PAVING AREAS SUBJECT TO HEAVY VEHICLE TRAFFIC.

BOXES TO BE USED IN ROADWAYS OR AREAS FREQUENTLY SUBJECT TO HEAVY VEHICLE TRAFFIC SHALL MEET A MINIMUM RATING OF AASHTO H25 AND SHALL NOT BE PLACE IN THE CONCRETE SECTION OF THE TRAILER SLIPS IDENTIFIED FOR TRAILER LANDING GEAR.

MINIMUM COVER REQUIREMENTS
0 to 600 Volts, Nominal, Burial in Inches
Type of Wiring Method or Circuit

Location of Wiring Method or Circuit	Direct Burial Cables or Conductors	Rigid Metal Conduit or Intermediate Metal Conduit	Nonmetallic Raceways Listed for Direct Burial without Concrete Encasement or Other Approved Raceways	Residential Branch Circuits Rated 120 Volts or Less with GFCI Protection and Maximum Overcurrent Protections of 20 Amperes	Circuits for Control of Irrigation and Landscape Lighting Limited to Not More than 30 Volts and Installed with Type UF or in other Identified Cable or Raceway
All locations not specified below	24	6	18	12	6
In trench below 2-inch thick concrete or equivalent	18	6	12	6	6
Under minimum of 4-inch thick concrete exterior slab with no vehicular traffic and the slab extending not less than 6 inches beyond the underground installation	18	4	4	6 (direct burial) 4 (in raceway)	6
Under streets, highways, roads, alleys, driveways, and parking lots	24	24	24	24	24
One- and two-family dwelling driveways and outdoor parking areas that are used only for dwelling-related purposes	18	18	18	12	18
Under Building	0 (In raceway or type MC or MI cable listed for direct burial)	0	0	0 (In raceway or type MC or MI cable listed for direct burial)	0 (In raceway or type MC or MI cable listed for direct burial)

Note: This table was developed from Table 300.5 of the Code where information for other Wiring Methods not listed above can be found. All conductors installed in these raceways must be approved for wet locations as listed in 310.8(C) of the Code.

1. Cover is defined as the shortest distant in inches measured between a point on the top surface of any direct-buried conductor, cable, conduit or other raceway and the top surface of finished grade, concrete, or similar cover.
2. Raceways approved for burial only where concrete encased shall require concrete envelope not less than 2 inches thick.
3. Lesser depths shall be permitted where cables and conductors rise for terminations or splices or where access is otherwise required.
4. Where one of the wiring methods listed in Columns 1-3 is used for the circuit types in Columns 4 & 5, the shallowest depth of burial shall be permitted.
5. Where solid rock prevents compliance with the cover depths specified in this table, the wiring shall be installed in metal or non-metallic raceway permitted for direct burial. The raceways shall be covered by a minimum of 2 inches of concrete extending down to rock.

KEYED NOTES

(E1) PROVIDE (2) 1" CONDUIT FROM MAIN BUILDING FOR COMMUNICATIONS. SEE ONE-LINE DIAGRAMS FOR POWER NEEDS.

(E2) PROVIDE (3) 2" TO GUARD HOUSE. PROVIDE (2) 2", WITH PULL STRING, FOR TELE/DATA AND (1) 2", FOR 3#1/0, 1 #6 GND. PROVIDE ALL NECESSARY CONDUIT TO SECURITY DESK AS DEFINED BY TELCOM DRAWINGS. COORDINATE INSTALLATION OF ALL CONDUIT AND CONNECTION TO GUARD HOUSE.

KEY VALUE	KEYNOTE DESCRIPTION (THIS SHEET)
1	TELEPHONE/DATA SERVICE ENTRANCE CONDUIT. (4) 4" WITH PULL STRINGS. TERMINATE 6" ABOVE FINISHED SLAB IN DEMARC ROOM. EXTEND TO PROPERTY LINE AND TERMINATE AS DIRECTED BY UTILITY COMPANY. LOCATION SHOWN IN PLAN IS APPROXIMATE; CONFIRM WITH PROVIDER. PROVIDE PULL BOXES EVERY 300' AND AS REQUIRED. PULL BOXES SHALL BE LOCATED WITHIN LANDSCAPING AREAS.
2	PROVIDE CONNECTION TO LIGHTED MONUMENT SIGN. COORDINATE EXACT LOCATION PRIOR TO ROUGH-IN. COORDINATE EXACT ELECTRICAL REQUIREMENTS WITH INSTALLER PRIOR TO BEGINNING WORK. PROVIDE NEMA 3R DISCONNECT SWITCH AS REQUIRED.
3	UNDERGROUND SERVICE ENTRANCE FEEDER, EXTENDED FROM UTILITY COMPANY PAD MOUNTED TRANSFORMER TO SERVICE ENTRANCE SWITCHBOARD MAIN SWITCH. REFER TO ELECTRICAL ONE-LINE DIAGRAM FOR CONDUIT AND CONDUCTOR SIZES AND QUANTITIES.
4	EXTEND (2) 1" EMPTY CONDUITS FROM FUTURE SHELTER LOCATION TO NEAREST ACCESSIBLE POINT IN WAREHOUSE AND TERMINATE IN 6"x6" JUNCTION BOX FOR FUTURE USE.
5	PROVIDE LIGHTING FOR BUS SHELTER. (2) TYPE L1 FIXTURES SURFACE MOUNTED TO ROOF STRUCTURE. COORDINATE MOUNTING DETAIL WITH ARCHITECT IN FIELD. ALL EXPOSED CONDUITS TO BE PAINTED TO MATCH ADJACENT SURFACES. ROUTE CIRCUIT SHOWN THROUGH LIGHTING RELAY PANEL AND CONTROL WITH REMAINING SITE LIGHTING. CONTRACTOR TO UTILIZE ONE OF THE 1" CONDUITS SPECIFIED IN KEY NOTE 4 ABOVE. EXTEND CONDUIT AND CONDUCTORS TO CIRCUIT SHOWN.
6	UNDERGROUND FEEDER FROM GENERATOR TO WIREWAY. REFER TO ELECTRICAL ONE-LINE DIAGRAM FOR CONDUIT AND CONDUCTOR SIZES AND QUANTITIES.
7	TRANSFORMER AND PRIMARY CABLES PROVIDED AND INSTALLED BY UTILITY. CONTRACTOR TO PROVIDE CONCRETE TRANSFORMER PAD PER UTILITY COMPANY SPECIFICATIONS. COORDINATE FINAL PAD LOCATIONS AND INSTALLATION REQUIREMENTS WITH GENERAL CONTRACTOR AND UTILITY REQUIREMENTS.

COORDINATE LOCATION OF ANY POLE LIGHTS WITH ANY FIRE LINES. PROVIDE A MINIMUM OF 60" SEPARATION FROM FIRE LINE AND POLE BASES.

VOLTAGE DROP

For 3% maximum voltage drop on 20A and 30A single phase home-run circuits, utilize the following table. L is length of home run.

Wire Guage	20A 277V 1-phase	20A 480V 1-phase
#12cu.	L<150'	L<250'
#10cu.	150'<L<250'	250'<L<450'
#8cu.	250'<L<350'	450'<L<650'
#6cu.	350'<L<500'	650'<L<950'
#4cu.	500'<L<700'	650'<L<950'

SITE GENERAL NOTES:

G-1 ALL UNDERGROUND CONDUITS SHALL BE MINIMUM 1" SCHEDULE 40 PVC AND SHALL INCLUDE A GROUND WIRE SIZED FOR THE CIRCUIT, UNLESS OTHERWISE NOTED.

G-2 ALL POLE LOCATIONS SHALL BE COORDINATED WITH LANDSCAPE ARCHITECT AND CIVIL ENGINEER PRIOR TO BEGINNING WORK.

G-3 ALL CIRCUITS SHALL BE ROUTED THROUGH LIGHTING RELAY PANELS AND CONTROLLED VIA PHOTOSENSOR AND TIMECLOCK. PROVIDE ROOF MOUNTED PHOTOSENSOR, FACE SENSOR TOWARDS TRUE NORTH. PHOTOSENSOR AND PHOTOSENSOR CONTROL CARD SHALL BE LIGHTING CONTROL & DESIGN MODEL #GR2400-PCC1 2WO-SMNE4 WITH MOUNTING BOX.

G-4 ALL CONDUCTORS SHALL BE #10 AWG CU, UNLESS OTHERWISE NOTED.

G-5 SITE LIGHTING ALTERNATE FIXTURES SHALL BE OF SIMILAR QUALITY TO THAT SPECIFIED. CONTRACTOR SHALL BE RESPONSIBLE FOR MEETING STATED ILLUMINANCE CRITERIA WITH ALTERNATE FIXTURES. PHOTOMETRIC PLANS SHALL BE SUBMITTED WITH ALTERNATE FIXTURES FOR APPROVAL

G-6 BUILDING MOUNTED LIGHT FIXTURES ARE MOUNTED AT VARIABLE HEIGHTS ABOVE THE FINISHED GRADE. REFER TO EXTERIOR LIGHTING FIXTURE SCHEDULE FOR MOUNTING HEIGHTS. REFER TO ARCHITECT'S ELEVATIONS FOR EXACT LOCATIONS.

G7 REFER TO ENLARGED GUARDHOUSE PLANS FOR UNDERGROUND TELECOM/SECURITY CONDUIT REQUIREMENTS.

GENERAL NOTES

1. ALL EXTERIOR LIGHTING CIRCUITS TO BE ROUTED THRU LOW VOLTAGE, FULLY PROGRAMMABLE LIGHTING RELAY PANEL.
2. WHEN INSTALLED BEHIND THE CURB, POLE BASES SHALL HAVE 3-FT CLEARANCE TO ROADWAYS AND CAR PARKING AND 12-FT CLEARANCE TO TRAILER PARKING. IN GENERAL, LIGHT POLES SHALL BE ALIGNED WITH PARKING STRIPES WHEN INSTALLED ADJACENT TO PARKING AREAS.
3. MINIMUM CONDUIT FOR SITE LIGHTING CIRCUITS SHALL BE 1" UNLESS NOTED OTHERWISE. MINIMUM WIRING SHALL BE #8 CU UNLESS NOTED OTHERWISE. (SEE VOLTAGE DROP TABLE FOR REQUIRED ADJUSTMENTS AS NEEDED)

LITHONIA LIGHTING

FEATURES & SPECIFICATIONS

INTENDED USE — Typical applications include corridors, lobbies, conference rooms and private offices.

CONSTRUCTION — Galvanized steel mounting/plaster frame; galvanized steel junction box with button-hinged access covers and spring latches. Reflectors are retained by torsion springs.
Vertically adjustable mounting brackets with commercial bar hangers provide 3-3/4" total adjustment.
Two combination 1/2-3/4" and four 1/2" knockouts for straight-through conduit runs. Capacity: 8 (4 in, 4 out). No. 12 AWG conductors, rated for 90°C.
Accommodates 12"-24" joist spacing.
Passive cooling thermal management for 25°C standard; high ambient (40°C) option available. Light engine and drivers are accessible from above or below ceiling.
Main ceiling thickness 3-5/2".

OPTICS — LEDs are binned to a 3-step SDCM; 80 CRI minimum. 90 CRI optional.
LED light source concealed with diffusing optical lens.
General illumination lighting with 1.0 S/MH and 55° cutoff to source and source image.
Self-flanged anodized reflectors in specular, semi-specular, or matte diffuser finishes. Also available in white and black painted reflectors.

ELECTRICAL — Multi-volt (120-277V, 50/60Hz) 0-10V dimming drivers mounted to junction box, 10% or 1% minimum dimming level available.
0-10V dimming fixture requires two (2) additional low-voltage wires to be pulled.
70% lumen maintenance at 60,000 hours.

LISTINGS — Certified to US and Canadian safety standards. Wet location standard (covered ceiling). IP55 rated. ENERGY STAR® certified product.

BUY AMERICAN — Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY — 5-year limited warranty. Complete warranty terms located at: www.acuitybrands.com/support/warranties-and-conditions
Note: Actual performance may differ as a result of end user environment and application.
All values are design or typical values, measured under laboratory conditions at 25 °C.
Specifications subject to change without notice.

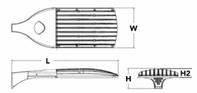
GRAAA LT	Oversized trim ring with 8" outside diameter[1]

Notes
1. Overall height varies based on lumen package; refer to dimensional chart on page 3.
2. Not available with Emitters.
3. Not available with emergency options.
4. Not available in voltage 120V or 277V.
5. Available with Clear (AR) reflector only.
6. 12.5" of plenum depth or top access required for battery pack maintenance.
7. Specify voltage. ER for use with generator supply EM power. Will require an emergency hot feed and normal hot feed.
8. Fixture begins at 80% light level. Must be specified with NPS80EZ or NPS80EZ ER. Only available with EZ10 and EZ1 drivers.
9. Not available with CP, NPS80EZ, NPS80EZER, NPP16DER or NBD options.
10. NLTAIR2, NLTAIRE2 and NLTAIREM2 not recommended for metal ceiling installations.
11. Requires SF, DF, or PE for all lumen packages with HAO.
12. Must specify voltage for 5000lm and above. 5000lm with marked spacing 24 L x 24 W x 14 H. Not available with emergency battery pack options.
13. Must specify 010 or 01 driver. Not available with nLight option. Not available with CP. Not recommended for metal ceiling installation. For use with emergency backup power systems other than battery packs.
14. Not available with 90CRI.

D-Series Size 2

LED Area Luminaire



Buy American

Catalog Number
Notes
Type

Use this line for Hydrel Order Pin (page 8) and all instructional elements.

Specifications

EPA: 1.1 ft² (0.10 m²)
Length: 40" (101.6 cm)
Width: 15" (38.1 cm)
Height 1: 7-1/4" (18.4 cm)
Height 2: (max): 3.5"
Weight: 36lbs

Introduction

The modern styling of the D-Series is striking yet unobtrusive - making a bold, progressive statement even as it blends seamlessly with its environment.

The D-Series distills the benefits of the latest in LED technology into a high performance, high efficacy, long-life luminaire. The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. The Size 2 is ideal for replacing 400-1000W metal halide in area lighting applications with energy savings of up to 80% and expected service life of over 100,000 hours.

			Shipped separately			
			BS	Bird spikes[14]		
			EGS	External glare shield		

Notes
1. Overall height varies based on lumen package; refer to dimensional chart on page 3.
2. Not available with Emitters.
3. Not available with emergency options.
4. Available in voltage 120V or 277V.
5. Available with Clear (AR) reflector only.
6. 12.5" of plenum depth or top access required for battery pack maintenance.
7. Specify voltage. ER for use with generator supply EM power. Will require an emergency hot feed and normal hot feed.
8. Fixture begins at 80% light level. Must be specified with NPS80EZ or NPS80EZ ER. Only available with EZ10 and EZ1 drivers.
9. Not available with CP, NPS80EZ, NPS80EZER, NPP16DER or NBD options.
10. NLTAIR2, NLTAIRE2 and NLTAIREM2 not recommended for metal ceiling installations.
11. Requires SF, DF, or PE for all lumen packages with HAO.
12. Must specify voltage for 5000lm and above. 5000lm with marked spacing 24 L x 24 W x 14 H. Not available with emergency battery pack options.
13. Must specify 010 or 01 driver. Not available with nLight option. Not available with CP. Not recommended for metal ceiling installation. For use with emergency backup power systems other than battery packs.
14. Not available with 90CRI.

A+ Capable Luminaire

This item is an A+ capable luminaire, which has been designed and tested to provide consistent color appearance and system-level interoperability.

- All configurations of this luminaire meet the Acuity Brands' specification for chromatic consistency
- This luminaire is A+ Certified when ordered with DTL® controls marked by a shaded background. DTL DLL equipped luminaires meet the A+ specification for luminaire to photocontrol interoperability1
- This luminaire is part of an A+ Certified solution for ROAM® or XPoint™ Wireless control networks, providing out-of-the-box control compatibility with simple commissioning, when ordered with drivers and control options marked by a shaded background

To learn more about A+, visit www.acuitybrands.com/aplus.

1. See ordering tree for details.
2. A+ Certified Solutions for ROAM require the order of one ROAM node per luminaire. Sold Separately: Link to Roam; Link to DTL DLL

A+ Capable options indicated by this color background.

FLOOD ZONE NOTE:

PROPERTY SHOWN HEREON LIES OUTSIDE A SPECIAL FLOOD HAZARD AREA ("SFHA") AS DEFINED BY THE FEDERAL EMERGENCY MANAGEMENT AGENCY; AS PER FEMA OFFICIALS, THE PROPERTY LIES WITHIN ZONE "X", AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN, AS SHOWN ON THE FLOOD INSURANCE RATE MAP IDENTIFIED AS COMMUNITY MAP NO. 36057C0215E, PANEL 215 OF 385, OF THE TOWN OF FLORIDA, MONTGOMERY COUNTY BEARING AN EFFECTIVE DATE OF JANUARY 19, 2018.

GENERAL NOTES:

HORIZONTAL DATUM IS NEW YORK STATE PLANE EAST ZONE, ESTABLISHED FROM GPS OBSERVATIONS AT THE TIME OF SURVEY

VERTICAL DATUM IS NAVD88, ESTABLISHED FROM GPS OBSERVATIONS AT THE TIME OF SURVEY

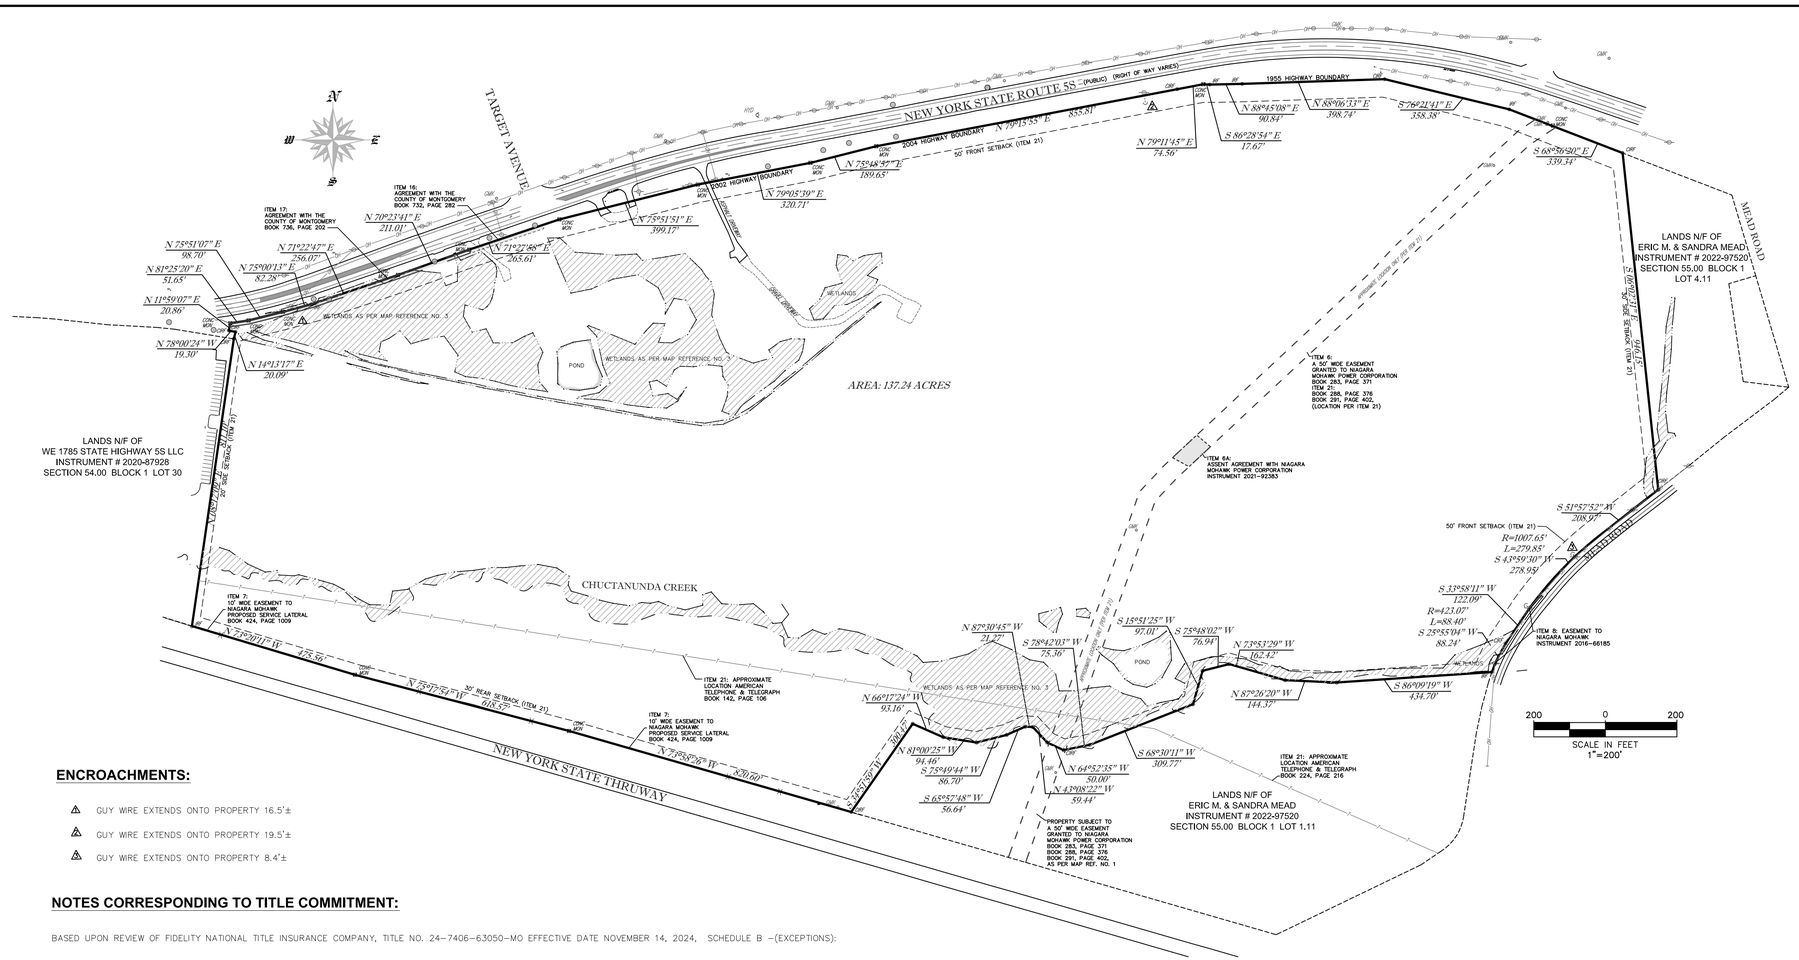
WETLANDS SHOWN HEREON AS PER MAP REFERENCE NO. 2.

CONTOURS AS SHOWN HEREON ARE AS PER MAP REFERENCE NO. 2.

UNAUTHORIZED ALTERATION OR ADDITION TO A SURVEY MAP BEARING A LICENSED LAND SURVEYOR'S SEAL IS A VIOLATION OF SECTION 7209, SUBDIVISION 2 OF THE NEW YORK STATE EDUCATION LAW.

ONLY COPIES FROM THE ORIGINAL OF THIS SURVEY MARKED WITH AN ORIGINAL OF THE LAND SURVEYOR'S INKED SEAL OR HIS EMBOSSED SEAL SHALL BE CONSIDERED TO BE VALID TRUE COPIES.

SURVEYED FROM RECORD DESCRIPTION AND AS IN POSSESSION.



SUBJECT TO COVENANTS, EASEMENTS, RESTRICTIONS, CONDITIONS AND AGREEMENTS OF RECORD.

SURVEY SUBJECT TO ANY RIGHT, TITLE OR INTEREST THE PUBLIC MAY HAVE FOR HIGHWAY USE.

SURVEY SHOWN IS SUBJECT TO ANY SUBSURFACE CONDITIONS THAT MAY EXIST, IF ANY.

UNDERGROUND FACILITIES AND STRUCTURES SHOWN HEREON WERE TAKEN FROM DATA OBTAINED FROM PREVIOUS MAPS AND RECORD DRAWINGS. ALL ABOVE GROUND STRUCTURES AND SURFACE FEATURES SHOWN HEREON ARE THE RESULT OF A FIELD SURVEY UNLESS OTHERWISE NOTED. THERE MAY BE OTHER UNDERGROUND UTILITIES, THE EXISTENCE OF WHICH ARE NOT KNOWN OR CERTIFIED BY THE UNDERSIGNED. THE SIZE AND LOCATION OF ALL UNDERGROUND UTILITIES AND STRUCTURES MUST BE VERIFIED BY THE APPROPRIATE AUTHORITIES. THE UNDERGROUND FACILITIES PROTECTIVE ORGANIZATION MUST BE NOTIFIED PRIOR TO CONDUCTING TEST BORINGS, EXCAVATION AND CONSTRUCTION.

SEE SHEETS 1 THROUGH 7 FOR SITE DETAILS.

NOTES CORRESPONDING TO TITLE COMMITMENT:

BASED UPON REVIEW OF FIDELITY NATIONAL TITLE INSURANCE COMPANY, TITLE NO. 24-7406-63050-MO EFFECTIVE DATE NOVEMBER 14, 2024, SCHEDULE B -(EXCEPTIONS):

ITEM 5: EASEMENT GRANTED TO THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY RECORDED IN DEED BOOK 215, PAGE 144 IS NOT PLOTTABLE AS DESCRIBED, NO METES AND BOUNDS. EASEMENT ALONG ROUTE 5S IN 1925.

ITEM 6: EASEMENT GRANT MADE BY EDYTH LOHMEYER TO NIAGARA MOHAWK POWER CORPORATION, DATED MAY 1, 1951 AND RECORDED IN BOOK 283 PAGE 371., AFFECTS THE PREMISES AND IS SHOWN HEREON. LOCATION AS PER ITEM 21.
WITH REGARD THERETO:
A. ASSENT AGREEMENT MADE BY AND BETWEEN NIAGARA MOHAWK POWER CORPORATION AND MEAD BROTHERS PROPERTIES LLC, DATED DECEMBER 31, 2020 AND RECORDED APRIL 13, 2021 AS INSTRUMENT NO. 2021- 92383, AFFECTS THE PREMISES AND IS SHOWN HEREON.

ITEM 7: EASEMENT GRANT MADE BY JAMES M. MEAD, JEAN MEAD AND EMILY M. MEAD TO NIAGARA MOHAWK POWER CORPORATION, DATED SEPTEMBER 27, 1979 AND RECORDED MARCH 7, 1980 IN BOOK 424 OF DEEDS AT PAGE 1009, AFFECTS THE PREMISES AND IS SHOWN HEREON.

ITEM 8: GRANT OF EASEMENT MADE BY MEAD FAMILY PARTNERSHIP TO NIAGARA MOHAWK POWER CORPORATION AND VERIZON NEW YORK INC., DATED OCTOBER 11, 2014 AND RECORDED MARCH 1,2016 AS INSTRUMENT NO. 2016-66185, AFFECTS THE PREMISES AND IS SHOWN HEREON.

ITEM 9: EASEMENT GRANT MADE BY ANNA YUNKER TO THE NEW YORK TELEPHONE COMPANY, DATED JANUARY 8, 1969 AND RECORDED JANUARY 22, 1969 IN LIBER 378 PAGE 646, IS NOT PLOTTABLE AS DESCRIBED. FOR TELEPHONE CABLE THAT WILL BE RELOCATED FOR FUTURE DEVELOPMENT BUT AFFECTS THE PREMISES.

ITEM 10: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO BRIAN YACUR AND DIANE YACUR, DATED DECEMBER 19, 1988 AND RECORDED JANUARY 6, 1989 IN LIBER 500 PAGE 207 AS REPEATED IN LIBER 522 PAGE 134. LIBER 652 PAGE 238 AND AS INSTRUMENT NO. 2021-93986, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY..

ITEM 11: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO ERNEST J. DAVIERO, JR. AND LOREEN DAVIERO, DATED JANUARY 13, 1989 AND RECORDED JANUARY 23, 1989 IN LIBER 501 PAGE 112, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY.

ITEM 12: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO MARK JOHNSON AND GINA M. JOHNSON, DATED JANUARY 27, 1989 AND RECORDED FEBRUARY 7, 1989 IN LIBER 501 PAGE 333 AS REPEATED IN INSTRUMENT NO. 2021-94000, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY.

ITEM 13: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO DOMINICK J. MEGNA AND MARY S. MEGNA, DATED JANUARY 27, 1989 AND RECORDED FEBRUARY 7, 1989 IN LIBER 501 PAGE 335 AS REPEATED IN INSTRUMENT NO. 2021-93999, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY.

ITEM 14: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO DEAN W. SERFIS AND JOANNE FORMOSA, DATED APRIL 24, 1989 AND RECORDED MAY 17, 1989 IN LIBER 506 PAGE 53 AS REPEATED IN LIBER 558 PAGE 209, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY.

ITEM 15: COVENANTS AND RESTRICTIONS CONTAINED IN DEED MADE BY WILLIAM J. PALUMBO, JR. TO VINCENT J. MONTAGNINO AND PAMELA J. MONTAGNINO, DATED JUNE 9, 1989 AND RECORDED JUNE 19, 1989 IN LIBER 507 PAGE 189, ASSUMED EXTINGUISHED DUE TO THE FACT WE 5S LLC NOW OWNS THE PROPERTY.

ITEM 16: GRANT OF PERMANENT CONSTRUCTION EASEMENT AND RIGHT-OF-WAY SET FORTH IN AGREEMENT MADE BETWEEN DEAN W. SERFIS AND THE COUNTY OF MONTGOMERY, DATED OCTOBER 22, 2002 AND RECORDED FEBRUARY 23, 2004 IN LIBER 732 PAGE 282, AFFECTS THE PREMISES AND IS SHOWN HEREON.

ITEM 17: GRANT OF PERMANENT CONSTRUCTION EASEMENT AND RIGHT-OF-WAY SET FORTH IN AGREEMENT MADE BETWEEN VINCENT J. MONTAGNINO AND THE COUNTY OF MONTGOMERY, DATED AUGUST 20, 2002 AND RECORDED MAY 3, 2004 IN LIBER 736 PAGE 202, AFFECTS THE PREMISES AND IS SHOWN HEREON..

ITEM 18: EASEMENT GRANT MADE BY EDWIN LISDELL AND ELIZABETH LISDELL TO POSTAL TELEGRAPH CABLE COMPANY, DATED AUGUST 19, 1935 AND RECORDED APRIL 2, 1936 IN VOLUME 234 AT PAGE 136 IS NOT PLOTTABLE AS DESCRIBED. EASEMENT FOR TRIMMING RIGHTS ALONG ROUTE 5S IN 1935..

ITEM 19: DRIVEWAY ENCROACHMENT AGREEMENT MADE BETWEEN ARLENE C. KNOWLES AND M.C. 1 DEVELOPMENT CORP., DATED NOVEMBER 1, 1995 AND RECORDED NOVEMBER 3, 1995 IN LIBER 599 PAGE 191, DOES NOT AFFECT THE PREMISES.

ITEM 20: GRANT OF EASEMENT MADE BY 1767 ROUTE 5S HOLDINGS, LLC TO NIAGARA MOHAWK POWER CORPORATION AND VERIZON NEW YORK INC., DATED JANUARY 13, 2012 AND RECORDED JULY 16, 2012 AS INSTRUMENT NO. 2012-47875, DOES NOT AFFECT THE PREMISES.

ITEM 21: MATTERS SET FORTH IN MAP FILED JUNE 14, 2022 AS INSTRUMENT NO. 014623 ARE SHOWN HEREON.

ITEM 22: UNRECORDED RIGHTS, IF ANY, IN FAVOR OF ANY ELECTRIC LIGHT OR TELEPHONE COMPANY TO MAINTAIN GUY WIRES EXTENDING FROM THE DESCRIBED PREMISES TO POLES LOCATED ON THE ROADS ON WHICH THE DESCRIBED PREMISES ABUT. SEVERAL GUY WIRES ARE LOCATED WITHIN THE PREMISES AND ARE DIPICTED AS ENCROACHMENTS AND SHOWN HEREON.

SURVEY NOTES:

1. THE SUBJECT PROPERTY HAS ACCESS TO PUBLIC UTILITIES FROM THE PUBLIC STREETS ADJACENT TO THE SUBJECT PROPERTY.

2. THE SUBJECT PROPERTY ABUTS, WITHOUT GAPS GORES OR STRIPS, AND HAS VEHICULAR AND PEDESTRIAN INGRESS TO AND EGRESS FROM NEW YORK STATE ROUTE 5S AND MEAD ROAD , WHICH IS/ARE COMPLETED, DEDICATED AND ACCEPTED PUBLIC RIGHT OF WAY.

3: EXCEPT AS SHOWN AND NOTED ON THIS SURVEY, BASED ON A CAREFUL PHYSICAL INSPECTION OF THE SUBJECT PROPERTY AND MATTERS OF RECORD OR PROVIDED BY THE TITLE COMPANY OR CLIENT, THERE ARE NO VISIBLE:HEIGHT OR BULK RESTRICTIONS, SETBACK LINES, PARKING REQUIREMENTS, PARTY WALLS, ENCROACHMENTS OR OVERHANGS OF ANY IMPROVEMENTS UPON ANY EASEMENT, RIGHT-OF-WAY OR ADJACENT LAND OR ENCROACHMENT OF THE IMPROVEMENTS LOCATED ON ADJACENT LAND ONTO THE SUBJECT PROPERTY, OTHER THAN AS NOTED ON THE ENCROACHMENT TABLE; OR IMPROVEMENTS, CONFLICTS, OFFICIALLY DESIGNATED 100 YEAR FLOOD PLAINS OR FLOOD PRONE AREAS, SPRINGS, STREAMS, CREEKS, RIVERS, PONDS, LAKES, CEMETERIES OR BURIAL GROUNDS OTHER THAN THOSE SHOWN HEREON.

APPENDIX 5

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: MSV1 - Amazon Distribution Center		
Project Location (describe, and attach a general location map): Approximately 1.5 miles west of Interchange 27 on the south side of Route 5S		
Brief Description of Proposed Action (include purpose or need): The Applicant is proposing to construct a ±3.2 Million SF warehouse/distribution facility. The project would have a ±652,000 SF footprint with 5 stories and an overall height of ±103.5'. The project would include approximately 417 tractor trailer spaces with 59 of these loading docks. The project would also include 990 automobile parking spaces. The project would include three (3) driveways on Route 5S and would operate 24 hours a day, 7 days a week. The project would include a new stormwater management system, lighting, electric substation, water tank and landscaping. Project would connect to municipal water and sewer located along Route 5S and include a new electrical substation.		
Name of Applicant/Sponsor: BMG Albany, LLC	Telephone: (781) 974-3628 E-Mail: sbaggett@bluewaterpg.com	
Address: One Tower Bridge, 100 Front Street, Suite 1225		
City/PO: West Conshohocken	State: PA	Zip Code: 19428
Project Contact (if not same as sponsor; give name and title/role): Steven Wilson, Project Manager, Bohler Engineering	Telephone: 518-461-8345 E-Mail: steven.wilson@bohlereng.com	
Address: 17 Computer Drive West		
City/PO: Albany	State: NY	Zip Code: 12205
Property Owner (if not same as sponsor): WE 5S LLC	Telephone: 1 (978) 287-8611 E-Mail: awinstanley@winent.com	
Address: 150 Baker Ave Ext		
City/PO: Concord	State: MA	Zip Code: 01742

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☐Yes☐No		
b. City, Town or Village Planning Board or Commission ☑Yes☐No	Planning Board - Site Plan Review; Special Use Permit;	1/21/25
c. City, Town or Village Zoning Board of Appeals ☑Yes☐No	Zoning Board - Parking Interpretation	2/20/25
d. Other local agencies ☑Yes☐No	Town of Florida Water and Sewer District No.1	TBD
e. County agencies ☑Yes☐No	Montgomery County Planning Board - 239M Review;	
f. Regional agencies ☐Yes☐No		
g. State agencies ☑Yes☐No	NYSDOT - Highway Work Permit NYSDEC - SPDES NOI NYSDOS - Building Permit Variance	TBD
h. Federal agencies ☑Yes☐No	Corps of Engineers - Section 404 Wetland Permit	N/A

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes☑No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes☑No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes☑No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes☐No

If Yes, identify the plan(s):

NYS Heritage Areas:Mohawk Valley Heritage Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☑Yes☐No

If Yes, identify the plan(s):

A portion of the site is listed in the Draft 2017 Agricultural and Farmland Protection Plan for Montgomery County; plan was never formally adopted so it is considered draft.

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
C-2 Commercial

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Greater Amsterdam

b. What police or other public protection forces serve the project site?
Montgomery County Sheriff, New York State Police

c. Which fire protection and emergency medical services serve the project site?
Florida Volunteer Fire Department

d. What parks serve the project site?
N/A

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Warehouse/distribution

b. a. Total acreage of the site of the proposed action? 137.2+/- acres
b. Total acreage to be physically disturbed? 66+/- acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 137.2+/- acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 18-24 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____ year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☐Yes ☑No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				
At completion of all phases				

g. Does the proposed action include new non-residential construction (including expansions)? ☑Yes ☐No

If Yes,

i. Total number of structures 1

ii. Dimensions (in feet) of largest proposed structure: +/-103.5' height; 650' width; and +/-1,100' length

iii. Approximate extent of building space to be heated or cooled: 3.2 million square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☑Yes ☐No

If Yes,

i. Purpose of the impoundment: Stormwater management

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☑Other specify: Stormwater Runoff

iii. If other than water, identify the type of impounded/contained liquids and their source.

N/A

iv. Approximate size of the proposed impoundment. Volume: See notes under Part vi million gallons; surface area: 2+/- acres

v. Dimensions of the proposed dam or impounding structure: N/A height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

Earth fill; The stormwater basins are designed to hold water during and immediately after storm events; they will not permanently impound stormwater.

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? ☐Yes ☑No
(Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)

If Yes:

i. What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

iv. Will there be onsite dewatering or processing of excavated materials? ☐Yes ☐No
If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____ acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐Yes ☐No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☑Yes ☐No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): Project will impact federally regulated wetlands; lack of NYSDEC jurisdiction has been confirmed

_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:
Project has a permit from Corps of Engineers for disturbance of up to 2 acres of federally regulated wetland. Total wetland impacts are approximately 1.8 acres

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐Yes ☑No
If Yes, describe:

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐Yes ☑No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:
Wetland mitigation credits has been purchased to mitigate wetland impacts; this has been approved as part of the permit from the Corps of Engineers.

c. Will the proposed action use, or create a new demand for water? ☑Yes ☐No
If Yes:

i. Total anticipated water usage/demand per day: +/-65,000 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☑Yes ☐No
If Yes: Existing main located along Route 5S

- Name of district or service area: Town of Florida Water District; City of Amsterdam water supply
- Does the existing public water supply have capacity to serve the proposal? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☑Yes ☐No
- Do existing lines serve the project site? ☐Yes ☑No

iii. Will line extension within an existing district be necessary to supply the project? ☐Yes ☑No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐Yes ☑No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: N/A gallons/minute.

d. Will the proposed action generate liquid wastes? ☑Yes ☐No
If Yes:

i. Total anticipated liquid waste generation per day: +/-55,000 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑Yes ☐No
If Yes: Existing main located along Route 5S

- Name of wastewater treatment plant to be used: City of Amsterdam
- Name of district: Town of Florida Water District
- Does the existing wastewater treatment plant have capacity to serve the project? ☑Yes ☐No
- Is the project site in the existing district? ☑Yes ☐No
- Is expansion of the district needed? ☐Yes ☑No

- Do existing sewer lines serve the project site? ☑Yes ☐No
- Will a line extension within an existing district be necessary to serve the project? ☐Yes ☑No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐Yes ☑No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☑Yes ☐No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or 44+/- acres (impervious surface)

_____ Square feet or 137.2 acres (parcel size)

ii. Describe types of new point sources. stormwater basins

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

New stormwater management areas

- If to surface waters, identify receiving water bodies or wetlands: Unnamed tributary of Chuctanunda Creek
- Will stormwater runoff flow to adjacent properties? ☐Yes ☑No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☑Yes ☐No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑Yes ☐No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Delivery trucks and employee vehicles

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

Temporary heating during construction

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

None

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐Yes ☑No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐Yes ☐No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☑Yes ☐No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☑ Morning ☑ Evening ☑Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): Refer to Traffic Impact Study for summary of auto/truck trips

iii. Parking spaces: Existing 10-15+/- Proposed 1,525+/- Net increase/decrease 1,510+/-

iv. Does the proposed action include any shared use parking? ☐Yes ☑No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe: Refer to Traffic Impact Study for summary of proposed improvements to Route 5S.

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☑No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☑Yes ☐No Project includes EV charging spaces for trucks

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☑No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: Project will have a 9.8 MW service

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other): National Grid; will serve letter provided on January 7, 2025

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☑Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7 am to 6 pm
- Saturday: 7 am to 5 pm
- Sunday: closed
- Holidays: closed

ii. During Operations:

- Monday - Friday: 24 hours per day
- Saturday: 24 hours per day
- Sunday: 24 hours per day
- Holidays: 24 hours per day

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☑ Yes ☐ No

If yes:

i. Provide details including sources, time of day and duration:

Blasting will be require for shale removal; blasting will be during the initial phase of construction and will be approximately 90 days in duration. HVAC equipment and truck traffic during project operations.

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☑ No

Describe: _____

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Parking lot lighting will be needed for safety; closest structure is approximately 600' away. All light fixtures will be dark sky compliant.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☑ No

Describe: _____

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures: _____

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes:

i. Product(s) to be stored _____

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities: _____

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☑ Yes ☐ No

If Yes:

i. Describe proposed treatment(s):

Landscape areas may require periodic use of pest/herbicide as part of routine maintenance. Application of all pest/herbicide would completed in conformance with all manufacturer requirements and state and federal regulations.

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☑ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: 10+ tons per 18-24 month +/- (unit of time)
- Operation : 1-2 tons per monthly (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Recyclable materials (e.g., wood, metal, etc.) would be seperated from solid waste
- Operation: Recyclable materials (e.g., paper, cardboard, plastic bottles, etc.) would be seperated from solid waste

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: Commercial waste hauler will transfer solid waste and recycables to appropriate facility
- Operation: Commercial waste hauler will transfer solid waste and recycables to appropriate facility

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☑ Industrial ☐ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☑ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	.5 +/-	43.5 +/-	+43
• Forested	20 +/-	12 +/-	-8
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	15 +/-	11 +/-	-4
• Agricultural (includes active orchards, field, greenhouse etc.)	85 +/-	0	-85
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	16.5 +/-	14.7+/-	-1.8
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Lawn/landscape areas/field	0	56+/-	+56

c. Is the project site presently used by members of the community for public recreation? ☐Yes ☑No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐Yes ☑No

If Yes,

i. Identify Facilities:

_____

_____

e. Does the project site contain an existing dam? ☐Yes ☑No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐Yes ☑No

If Yes:

i. Has the facility been formally closed? ☐Yes ☐ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐Yes ☑No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐Yes ☑ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐Yes ☐No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____

☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures: _____

_____

_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐Yes ☑No

If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

_____

_____

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☐ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 8'+/- feet

b. Are there bedrock outcroppings on the project site? ☑ Yes ☐ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? <5% %

c. Predominant soil type(s) present on project site:

Appleton Silt Loam	40 %
Palatine Silt Loam	20 %
Lansing Silt Loam	10 %

d. What is the average depth to the water table on the project site? Average: 0-10' feet

e. Drainage status of project site soils:
☑ Well Drained: 20 % of site
☑ Moderately Well Drained: 60 % of site
☑ Poorly Drained 20 % of site

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 50 % of site
☑ 10-15%: 40 % of site
☑ 15% or greater: 10 % of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? Refer to delineated wetland boundaries shown on site plans. ☑ Yes ☐ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name 876-162 Classification C
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name Federal Waters, Federal Waters, Federal Waters,... Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site:
White tail deer, squirrel | Refer to Natural Resource Report |
raccoon, skunk |
variety of birds

n. Does the project site contain a designated significant natural community? ☐Yes ☑No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation):
ii. Source(s) of description or evaluation:
iii. Extent of community/habitat:
- Currently: acres
- Following completion of project as proposed: acres
- Gain or loss (indicate + or -): acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐Yes ☑No
If Yes:
i. Species and listing (endangered or threatened): Refer to Habitat Assessment for further information.

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐Yes ☑No
If Yes:
i. Species and listing:

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐Yes ☑No
If yes, give a brief description of how the proposed action may affect that use:

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☑Yes ☐No
If Yes, provide county plus district name/number: MONT003

b. Are agricultural lands consisting of highly productive soils present? ☑Yes ☐No
i. If Yes: acreage(s) on project site? 60+/-
ii. Source(s) of soil rating(s): NRCS

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐Yes ☑No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent:

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐Yes ☑No
If Yes:
i. CEA name:
ii. Basis for designation:
iii. Designating agency and date:

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☑ Yes ☐ No

If Yes:

i. Describe possible resource(s): The site was the subject of a Phase III Data Retrieval Plan that was complete in July 2022. SHPO reviewed the completed plan and confirmed the project's Adverse Effects to the J Houck Archeaological Site have been mitigated in August 2022.

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Riverlink Park

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): City Park

iii. Distance between project and resource: 2+/- miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name Steven R. Wilson Date 4/22/25

Impervious Surface	55+/- acres	43+/- acres
Total Site Disturbance	90+/- acres	66+/- acres
Construction Duration	18-24 months	18-24 months
Blasting Potential	Construction would require removal of shallow bedrock through a combination of ripping via a large track mounted backhoe and controlled blasting. Where blasting is determined to be necessary, it would be completed in accordance with all applicable state and federal regulations.	Construction would require removal of shallow bedrock through a combination of ripping via a large track mounted backhoe and controlled blasting. Where blasting is determined to be necessary, it would be completed in accordance with all applicable state and federal regulations. At a minimum, the blasting protocol will include preparing pre-blast surveys; preparing a blasting plan; performing the work within regulatory limits for vibration and overpressure (noise); field monitoring for vibration and overpressure using seismographs; and maintaining logs of the drilling and blasting work.
Traffic		
Traffic AM Peak	120 trips	157 trips
Traffic PM Peak	162 trips	139 trips
LOS (Level of Service)	Overall, during the AM Peak and PM Peak, for intersections in the vicinity of the site the LOS would remain unchanged with construction of the project; intersection would continue to operate at LOS C (AM Peak) and LOS B (PM Peak)	Overall, during the AM Peak and PM Peak, for intersections in the vicinity of the site the LOS would generally remain unchanged with construction of the project; However, all intersections would continue to operate a LOS A/B/C during the AM and PM peaks.
Driveways on Route 5S	1	3
Off Site Traffic Improvements	Proposed improvements included a shared left- turn/through lane and a separate right turn lane be constructed on the southern leg New Driveway/Route 5S/Target Drive Intersection. In addition, the southbound left-turn lane currently provided on Target Drive should be modified to allow through movements to the Employee Driveway.	Proposed improvements at the New Driveway/Route 5S/Target Drive Intersection include exclusive westbound left-turn lane with approximately 400’ of storage and signalized the intersection. For the NYS Route 5S/ West Driveway widen NYS Route 5S to provide an exclusive westbound left-turn lane with approximately 200’ of storage.
Water/Wastewater Infrastructure		
Water Usage	6,850 gpd	65,000 gpd
Wastewater Generated	6,850 gpd	54,000 gpd

Off Site Infrastructure Improvements Required	None	None
Operations		
Hours of Operation	24 hours per day/7 days a week (closed on holidays)	24 hours per day/7 days a week
Lighting	All lighting is dark sky friendly; the closest residential property is approximately 530' from proposed light source	All lighting is dark sky friendly; closest residential property is approximately 590' from a proposed light source
Landscaping	Landscape Plan proposed 40 Shade Trees and 83 Evergreen Trees	Landscape Plan proposes 199 Shade Trees; 250 Evergreen Trees; 6 Ornamental Trees; 91 Trees and 283 Shrubs around the stormwater management areas
Waste Generation	1-2 tons of waste per month	1-2 tons per month
Miscellaneous		
Cultural Resources	The project completed a Phase I Archaeological Investigation, Phase II Site Evaluation and Phase 3 Date Retrieval Plan; SHPO provide correspondence on August 26, 2022 indicating the project's adverse effects have been mitigated.	SHPO reaffirmed the project would not affect archaeological resources in a February 20, 2025 correspondence.
Floodplain	No floodplain impacts	No floodplain impacts
Wildlife/Threatened and Endangered Species	The only Threatened or Endangered Species identified to potentially occupy the site was the Northern long-eared bat. To mitigate potential impacts, no tree clearing would occur between April 1 and October 31.	The only Threatened or Endangered Species identified to potentially occupy the site was the Northern long-eared bat. To mitigate potential impacts, no tree clearing would occur between April 1 and October 31.
Agricultural Resources	Approximately 85 acres of the parcel is currently in active agricultural and used for hay production. Construction of the project would eliminate the agricultural use from the property.	Approximately 85 acres of the parcel is currently in active agricultural and used for hay production. Re: Preliminary Geotechnical Engineering Report (Reissued)
MSV1 – Proposed Amazon ARS Facility
Florida, New York

Dear Josh:

INTRODUCTION

This preliminary geotechnical engineering report (report) was prepared by Sanborn, Head Engineering, P.C. (Sanborn Head) for BMG Albany LLC (BMG Albany, Client) regarding the proposed Amazon ARS Facility (MSV1) located on New York Route 5S (Route 5S) in Florida, New York (Site). The objectives of our work were to assess the subsurface conditions in the proposed development area and provide geotechnical engineering recommendations related to the design of building foundations, the building floor slab-on-grade, site slopes, retaining walls, pavement design, and recommended earthwork procedures for the site work. Where appropriate this report is subject to the limitation in Appendix A.

This report references and expands on subsurface explorations and laboratory testing performed and collected under a previous design concept for WE Acquisitions, LLC, titled *Report of Geotechnical Investigation, Proposed Warehouse, New York State Route 5S*, prepared by Whitestone Associates, Inc. (Whitestone), dated August 26, 2019. Excerpts of the subsurface logs and soil laboratory data are provided in Appendix B and C.

Site Description

The Site, depicted in Figure 1, is approximately 135.3-acre in size is bounded by Route 5S to the north, United States Interstate 90 (I-90, New York State Thruway) to the south, Mead Road to the east, and an existing Amazon facility to the west. The Site primarily consists of undeveloped farmlands with wooded areas located in the north and south, wetlands in the northeast and south, and ponds within the northwestern and southeastern portions of the Site. In addition, existing transmission lines cross the Site from east to west approximately 100 to 400 feet north of the Site's southern boundary, and an existing 50-foot-wide gas utility easement bisects the Site from north to south. The Site The existing conditions within the proposed development area generally consist of sloping farmlands, wooded areas, and wetlands, as well as existing gravel and asphalt driveways.

Based on a review of available historical aerial photographs, the Site was previously occupied by two (2) residential buildings with detached barn and garage structures located along Route 5S. These structures were razed between September 2020 and April 2022. The balance of the Site, except for the wooded areas, appears to have been used for agricultural purposes.

Based on a conceptual site plan entitled *MSV1, Concept Plan A* prepared by Bohler Engineering (Bohler) of Albany, New York, and provided electronically to Sanborn Head on February 25, 2025, the topographic highpoint is located near the center of the Site at approximate elevation (El.) 555 feet. The topography generally slopes down radially to the northeast, east, and south, to a low point located near the northeast corner of the Site at approximate El. 469 feet. In general, the slopes to the north and northwest are more gradual, dropping to a low point along Route 5S of approximate El. 531 feet. In the southwestern portion of the Site, the ground surface rises from an on-Site brook/wetlands, at approximate El. 480 feet, up to the NYS Thruway at approximate El. 520 feet. Elevations discussed herein refer to the North American Vertical Datum of 1988 (NAVD 88

Project Description
According to the plan titled *Preliminary Grading Plan*, prepared by Bohler and provided on March 21, 2025, the proposed development consists of a new, 652,060 square feet multi-story warehouse building associated retaining walls, access roadways, loading dock and transportation staging areas, associated surface parking areas, facility infrastructure features (i.e., substation transformer pad and fire storage tank foundations), and stormwater management features.

Based on the referenced grading plans, the proposed finished floor elevation is 542 feet. It is anticipated that to meet proposed grades, cuts up to approximately 32 feet and fills up to approximately 42 feet will be required. The maximum proposed retaining wall height is approximately 35 feet.

SUBSURFACE EXPLORATION PROGRAM
Recent Subsurface Explorations by Sanborn Head
Between February 10 and 21, 2025, Atlantic Testing Laboratories of Canton, New York advanced 22 test borings (designated SH-1 through SH-22) at the Site. The test borings were advanced using a GeoProbe® drill rig using hollow stem auger techniques to depths ranging from approximately 4.3 feet to 30.5 feet below the ground surface (bgs), or between approximate El. 491.7 and 545.7 feet. Auger and/or split-spoon refusal, likely due to bedrock, was encountered at each test boring location and 10-foot length of NX-size bedrock cores were collected at test borings SH-10 and SH-11.

The test borings were observed and logged by Sanborn Head on a full-time basis. Standard Penetration Tests (SPTs) were performed in general accordance with ASTM D1586 at five-foot intervals to the termination depth. Representative soil samples were obtained by split-barrel sampling procedures, and Sanborn Head personnel visually classified each sample in the field. Soil samples were classified using both the Modified Burmister System and Unified Soil

Classification System and a legend is provided in Appendix B that describes both classification systems. Additional soil characteristics such as density and consistency (based on SPT data), color and moisture were noted on the logs included in Appendix B.1.

Explorations were field located using a Global Navigation Satellite System and are shown on Figure 2. Ground surface elevations were estimated by interpolating between surface elevations obtained from a plan titled *MSV1 Concept Plan A*, prepared by Bohler, as presented on Figure 2 and 3.

Subsurface Explorations by Others

Between January and March 2019, Terracon completed two (2) test boring programs, completing 48 test borings designated B-1 through B-16 and AB-1 through AB-32. Additionally, on June 19, 2019, Whitestone completed a test pit program completing eight (8) test pits designated TP-1 through TP-8 for a prior design concept. Excerpts of previously completed subsurface logs by prepared by others are provided in Appendix B.2 and their as-drilled locations depicted on Figure 2 and 3.

SOIL LABORATORY TESTING

Laboratory Testing by Sanborn Head

Geotechnical laboratory tests were performed by GeoTesting Express, Inc. of Acton, Massachusetts to evaluate the engineering properties of the on-site soils. Five (5) soil samples from test borings across the Site were submitted for grain size distribution (sieve) analysis in accordance with ASTM D6913. Additionally, ten (10) soils samples were submitted to evaluate in-situ moisture content in accordance with ASTM D2216. Additionally, one (1) rock core sample was submitted for Uniaxial Compressive Strength (UCS) strength index testing in accordance with ASTM D7012.

Rock Swelling Potential Testing, including chemical and petrographic analysis, was performed by EXP of Montreal, Quebec, Canada to evaluate the pyrite swelling potential of two (2) core samples collected from SH-10 and SH-11, additionally both samples were submitted for UCS strength index testing.

Please note that natural glacial till soil at the Site may contain a oversized cobbles and boulders, which were not included in soil samples submitted to the laboratory due to sampling/testing procedures. Laboratory test reports should be interpreted accordingly. Due to the timing of this report, only a partial set of geotechnical laboratory test reports were available and are provided in Appendix C. Once testing is complete, a complete set of geotechnical laboratory test reports will be transmitted.

Laboratory Testing by Others

Whitestone completed additional geotechnical laboratory testing during a previous Site concept, including sieve analysis and rock swelling potential testing on bulk samples collected during their previous subsurface exploration program. The results of laboratory testing are provided in Appendix C.2.

SUBSURFACE CONDITIONS

Based on the subsurface exploration data collected by Sanborn Head and data collected by others, the generalized subsurface profile at the Site generally consists of topsoil, underlain by silt and clay deposits and glacial till, overlying weathered and competent bedrock. Fill material was encountered at AB-2 and peat was encountered at SH-8. The following paragraphs provide additional information regarding the subsurface conditions encountered:

Fill material was encountered at AB-2 below an approximately 0.3-foot-thick gravel roadway. The fill material extended to a depth of approximately 2 feet bgs (El. 529 feet) and is described as medium dense clayey sand with gravel with pieces of geotextile fabric observed within the stratum. While not encountered at other exploration locations, it is anticipated that fill material may exist in the vicinity of previously demolished structures and driveways near Route 5S and below existing gravel access roads.

Topsoil was encountered at the surface at each exploration location except B-5, AB-2, and AB-13 and extended to depths ranging from approximately 0.2 feet to 4 feet, or El. 486 feet to El. 555.2 feet. Based on the agricultural history of the Site, it is anticipated that the thickness of topsoil varies significantly across the Site. The topsoil is generally described as soft to very stiff, clayey silt to silt and clay, with varying amounts of sand and gravel and few to very few organic particles. At SH-13, the topsoil encountered is described as medium dense with fine to coarse sand and gravel, trace silt, with few organic particles.

Peat was encountered beneath the topsoil layer at SH-8 to a depth of approximately 9 feet bgs, or El. 496 feet. This deposit is described as very soft peat and organic silt, with trace sand.

Silt and Clay deposits were encountered at the surface at AB-13, and beneath the topsoil layer at B-3, B-6, AB-3, SH-2 through SH-5, SH-7, and SH-9. Where encountered, the silt and clay deposits extend to depths ranging from approximately 2 feet to 9 feet bgs, or El. 495.5 feet to El. 553 feet. The silt and clay deposits are generally described as medium stiff to very stiff, clayey silt to silt and clay, with varying amounts of sand and gravel. Very few to few organics were observed within the silt and clay deposits at exploration locations B-3, B-6, AB-3, and SH-4.

Glacial Till was encountered underlying the upper soil layers at a majority of exploration locations, extending to depths ranging from approximately 2 feet to 22.9 feet bgs, or El. 467 feet to El. 551.5 feet. The glacial till deposits are generally described as very stiff to hard, clayey silt to silt and clay, with varying amounts of sand, gravel, cobbles, and boulders.

Bedrock, or refusal due to probable bedrock, was encountered at depths ranging from approximately 1 foot to 22.9 feet bgs, or El. 465.6 feet to El. 551.6 feet. NX-size bedrock cores were retrieved at SH-10 and SH-11, and a NQ-size bedrock core was retrieved at B-5. The cores are described as medium hard, slightly to severely weathered, gray to dark gray, **Shale**, very close to close horizontal to vertical jointing, slightly to moderately fractured. Based on publicly available geological mapping entitled *Geologic Map of New York; Hudson-Mohawk Sheet,*

1:250,000 authored by L.V. Rickard and D.W. Fisher**,** the shale encountered in our subsurface program is consistent with Utica Shale of the Trenton Group.

The Rock Quality Index of the bedrock cores ranges from 0% to 91%. Laboratory testing indicates that the bedrock has a Swell Potential Petrographic Index of 50 to 67 corresponding to a "medium to high swelling potential," pyrites content ranging from 0.11% to 1.44%, sulphates content ranging from 0.01% to 0.02%, and compressive strength ranging from 34.8 to 147.5 Mpa (e.g., 5 to 21 kips). Loose to very dense weathered bedrock was generally encountered above the competent bedrock and ranges in thickness between approximately 0.1 feet and 8.4 feet.

A contour plan of the estimated elevation of weathered or competent bedrock based on our interpretation of the subsurface data is presented on Figure 3.

Groundwater was encountered at depths ranging from approximately 1 foot to 18.3 feet bgs, or El. 498 feet to El. 550 feet. Mottling (redoximorphic) features were observed at eleven (11) of the previous test boring locations at depths ranging from the ground surface to approximately 6.5 feet bgs. Based on the subsurface conditions encountered, we anticipate that groundwater may be perched at various depths within the glacial till or at the top of the bedrock surface throughout the year.

Where encountered, groundwater measurements were made under the conditions stated on the logs. Due to the fine-grained nature of the Site soil materials, the groundwater levels are generally interpreted as unstabilized. We note that groundwater levels will vary depending on factors such as season, precipitation, construction activity, and other conditions, which may differ from those at the time of our observations.

GEOTECHNICAL ENGINEERING RECOMMENDATIONS

The following presents our geotechnical engineering recommendations related to design of proposed building foundations and the floor slab-on-grade, pavement design, and earthwork procedures for subgrade preparation. Our recommendations are based on the preliminary grading plan prepared by Bohler and provided to Sanborn Head electronically on March 21, 2025.

Engineering Evaluation of Subsurface Conditions

Sanborn Head's engineering evaluation of subsurface conditions and their impact on design and construction is presented below.

- **Pyritic Shale:** The bedrock underlying the Site is known to include pyritic minerals, which when exposed to oxygen undergo a chemical reaction that replaces the pyrite with gypsum. This in turn creates an expanding rock material that continues to expand over long durations (multiple years to decades). Based on the recent Swell Potential laboratory testing results, and consistent with previous test results presented by Whitestone, the on-Site Pyritic Shale is characterized as having a medium to high swelling potential.

Unfortunately, neither the maximum swelling deformation, nor rate of swelling can be determined; therefore, building foundation solutions should consider: (i) reduction of oxygen exposure; and/or (ii) capacity to resist uplift/swelling forces.

Strategies to consider for reducing oxygen exposure to the Pyritic Shale and bedrock subgrade may include, but is not limited to:

- Eliminating crushed shale products;
- Increasing subgrade cover depth;
- Capping the exposed bedrock with a soil or geomembrane barrier;
- Removing bedrock; and/or
- limiting excessive fracturing if blasted.

Based on research by others[1], under laboratory conditions if the Pyritic Shale is allowed to react, significant swelling pressures can develop. The formation of gypsum within the shale partings induced pressures between 4,651 and 13,176 pounds per square foot (psf).

- **Deep Foundation System and Structural Slab:** We recommend that the proposed warehouse, auxiliary buildings, and fire tanks be supported on a drilled deep foundation system consisting of drilled shafts/caissons set into the underlying bedrock. The deep foundation system should be designed to resist the applied compressive, tension, and lateral loads while limiting total and differential post-construction settlements to 1-inch and ½-inch, respectively and that horizontal deflections be limited to ½-inch. The deep foundations should be sized appropriately for the anticipated loading and be spaced a minimum of two diameters center to center.

  Additionally, we recommend that the building slab be constructed as a structural slab, with crawlspace and void form to account for potential heaving, supported on deep foundation elements. At a minimum, the slab design should include a sealed bedrock barrier to limit oxygen reactions within the underlying pyritic shale.

  Deep foundations should be designed in accordance with the 2020 Building Code of New York State (BCNYS). The final design of the deep foundation system should be prepared by a Professional Engineer licensed in the State of New York and reviewed by Sanborn Head on your behalf as the geotechnical engineer of record.

- **Weathered Bedrock and Bedrock Excavation:** Weathered bedrock or bedrock removal is required to achieve proposed subgrades, for the building, southern and western parking, the eastern stormwater management areas, as well as limited areas for deeper utilities. Where encountered, and in order to limit the effects of the swelling potential of the existing weathered shale, weathered rock should be removed to expose a competent bedrock subgrade, at least 18 inches below the proposed subgrade elevation.

[1] Hoover, Shad E.; Wang, Mian C.; and Dempsey, Brian (2004), "Structural Damage Induced by Pyritic Shale," International Conference on Case Histories in Geotechnical Engineering. 2.

Where competent bedrock is encountered above proposed subgrade the bedrock should be removed to at least 18 inches below the subgrade elevation or the proposed utility pipe invert elevations, or deeper if particular bedding thickness is specified. This depth is needed, to seal the exposed bedrock subgrade from oxygen using a bituminous sealant, or an approved equivalent, a 6-inch-thick (minimum) Lean Mat Concrete layer, and a 12-inch-thick layer of Structural Fill soil cushion. Additionally, we recommend sealing the exposed bedrock subgrade within 1-week of their exposure.

If blasting is chosen to be the most economical means of removing bedrock, then blasting should be performed in accordance with the New York State Department of Labor regulations under *§107-05 Safety and Health Regulations, paragraph N*. Additionally, a permit may also be required from the Town of Florida. The blasting contractor should take special care to consider ways to limit overbreak and fracturing to achieve the proposed subgrade.

- **Bedrock Reuse:** Due to the swelling potential of the shale bedrock, removed shale bedrock will not be suitable for reuse as fill material below the proposed building or parking areas, nor in the reinforced zone behind retaining walls. Bedrock reuse should be limited as raise-in-grade fill in landscaped areas, provided it is also located outside the building footprint and the limits of the zone of influence for footings and pavement areas. Re-used shale materials should be expected to experience long-term swelling.

- **Unsuitable Materials:** Clays, Peat, organic silt, and organic topsoil and subsoil containing organic matter such as tree roots, tree stumps, and vegetation debris, should be considered unsuitable material below the proposed warehouse building, floor slabs, retaining walls, and pavement areas. Topsoil and subsoil containing roots should be removed down to a subgrade consisting of the existing inorganic glacial till. Topsoil and subsoil containing less than 5 percent organic material may be re-used deeper than 10 feet below finished grade in parking areas, provided it is also located outside the limits of the zone of influence for stormwater infiltration. Other organic soil may be re-used in proposed landscaped areas or hauled off-Site.

- **Reuse of Excavated Materials:** Excavated overburden soil that meets the material specifications in Table 1 for On-Site Fill may be reused as compacted fill below the base course layer in pavement areas. Excavated overburden soil materials that meet the material specifications in Table 1 for Common Fill may be reused as compacted fill at least 3 feet below the base course in pavement areas. We anticipate the natural silt and clay and glacial till soils will be difficult to place and compact to the required specifications during cold and wet periods of the year. The contractor must protect the excavated clayey soil from inclement weather during the cut and fill earthwork by sequencing the work such that cut material is placed as compacted fill the same day, protecting excavated soil by covering stockpiles, and limiting construction traffic on exposed subgrade soils.

Pyritic Shale should not be processed to produce select materials, nor re-used for site work. Re-use of the Pyritic Shale should be limited to landscape areas only.

Construction Recommendations and Earthwork Procedures

Blasting Requirements

Blasting should be performed in accordance with the New York State Department of Labor regulations (*§107-05 Safety and Health Regulations*, *paragraph N)* and the NYSDOT *Geotechnical Engineering Manual (GEM-22*), which require at a minimum the following activities:

- Preparing pre-blast surveys;
- Preparing a blasting plan;
- Performing the work within regulatory limits for vibration and overpressure (noise);
- Field monitoring for vibration and overpressure using seismographs; and
- Maintaining logs of the drilling and blasting work.

To the extent practical, blasting should be completed prior to the construction of the building foundation, surface finishes, and retaining walls to limit vibration of the proposed structures. Blasting should not be performed within 7 days after concrete is poured unless approved by the Engineer. The blasting contractor should take special care to consider ways to limit overbreak and fracturing to achieve the proposed bedrock subgrade.

Building Area and Footing Subgrade Preparation During Construction

The following describes the recommended earthwork procedures to prepare the building areas.

- At the onset of earthwork operations, the Site should be properly graded to provide a working subgrade for installing the deep foundations elements and to limit stormwater from entering the work areas or ponding on the exposed soil subgrade. Construction traffic over the exposed subgrade should be limited to the extent possible.

- Where additional fill is necessary to achieve proposed grades, On-Site Fill or Structural Fill that meets the material recommendations in Table 1should be utilized. Fill should be placed in loose lifts not to exceed 12 inches in thickness and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

- Excavation and backfilling should be performed in the dry. Fill should not be placed, and footings should not be constructed, over a subgrade with standing water or that is frozen. If standing water is present on the subgrade, then the water should be removed from the surface and soft and yielding soil be removed or allowed to dry prior to placement of additional fill or concrete. IF the subgrade is frozen, then remove the frozen soil or allow the soil to thaw and then recompact the soil prior to placement of fill or concrete.

Subsurface Utility Construction

Trenches for utility excavations should be performed in accordance with local, state, and federal regulations, including the Occupational Safety and Health Administration (29 CFR Part

1926) excavation trench safety standards. A competent person as defined by the regulation is required to confirm the stability of excavations during construction.

Where excavations cannot be sloped back and/or temporarily shored in accordance with OSHA requirements, a temporary earth retaining system (TERS) will be required. The TERS should be selected by the contractor and designed by a Professional Engineer licensed in the State of New York. Care should be taken during construction to protect existing adjacent structures, utilities, and roadways from being undermined.

Fill placed within five (5) feet horizontally of proposed utilities should consist of On-Site Fill, or Structural Fill. Fill should be placed in loose lifts not to exceed 12 inches in thickness and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

Utility Trenching in Bedrock: Bedrock is anticipated to be encountered when excavating trenches in the eastern portion of the Site. Because of this, it is recommended that bedrock be removed to a minimum of 5-feet from the centerline of the proposed utility trench alignment to account for lateral forces due to potential swelling, and at least 18-inches below the proposed invert of utility pipe to allow for sealing of the exposed rock sidewalls and subgrade using spray-on bituminous sealant, or an approved equivalent, and Lean Mat Concrete prior to backfilling with bedding material as specified by others.

Temporary Dewatering

Perched groundwater is expected to exist at depths between 1 to 18.3 feet below the existing surface; therefore, temporary excavation dewatering and/or temporary diversion ditches may be necessary to manage groundwater. Additionally, temporary excavation dewatering in excavations during period of heavy precipitation or snow melt may be needed. Temporary dewatering may be accomplished by pumping filtered water from sumps installed in low points of the excavations. Discharge water should be managed in accordance with local, state, and federal government requirements and the requirements of the project-specific Stormwater Pollution Prevention Plan.

Building Foundation Design

The following sections presents preliminary recommendations for building foundation design.

Drilled Shafts

Due to the potential for post-construction swelling within the pyritic Shale, and the inability to predict location, swell rate, or total movement due to post-construction swelling, we recommend that the building be founded on drilled shafts set into bedrock and integrated with a structural slab overlying a crawlspace with void forms. Based on information provided electronically to Sanborn Head form the DLR Group on March 11, 2025, it is our understanding that the proposed building column loads will range from 160 to 1990 kips.

The following recommended allowable capacities are for the preliminary design of the drilled shafts:

- Skin Friction in Glacial Till: 3 ksf
- Skin Friction in Weathered Bedrock: 3 ksf
- Skin Friction in Competent Bedrock: 8 ksf
- End Bearing in Competent Bedrock: 80 ksf

Skin friction resistance should be ignored between the bottom of the lowest slab and the top of the glacial till. Drilled shafts that derive capacity from combined end bearing and skin friction should be designed to limit the end bearing capacity to a maximum of 50 percent of the total capacity. The minimum center-to-center spacing between drilled shafts designed using skin friction support should be no less than two times the shaft diameter.

We anticipate that the proposed structure can be supported on 2 to 6-foot diameter drilled shafts embedded into competent bedrock depending on the design load. We anticipate that the drilled shafts will be socketed into competent bedrock between 5 to 20 feet depending on the applied load; where socket lengths less than 20 feet are proposed, calculations for the load condition need to be provided by the project team. For drilled shafts with uplift loads, the steel reinforcement should extend the full depth of the drilled shaft. For drilled shafts with lateral loading, the steel reinforcement should extend to the top of bedrock. For drilled shafts with gravity loads only, the steel reinforcement should extend 1/3 the length of the shaft. A bond-break between the concrete shaft and the rock sidewall is recommend.

For lateral support, we recommend the following preliminary design parameters to limit lateral movement to less than 0.5 inches:

- 5-foot-diameter shaft
  - Lateral capacity of 75 kips
  - Max moment is 900 kip-feet
  - Max shear is 80 kips
- 6-foot-diameter shaft
  - Lateral capacity of 100 kips
  - Max moment is 1,500 kip-feet
  - Max shear is 115 kips

Structural Slab Design

We recommend the building slab be constructed as a bi-directional reinforced structural slab with loads transferred to the drilled shafts. We further recommend that the slab system account for a crawlspace below the building to incorporate a void form system designed to limit the effect of ground heave pressure on the proposed slab.

Foundation Design Alternative – Shallow Foundation Bearing on Thickened Structural Fill Soil Cushion

Given the anticipated costs, an alternative to the recommended drilled shafts foundation is currently being evaluated by the project team. A potential alternative foundation concept may include the following:

- Increased bedrock removal (i.e., a deeper profile);
- Placement of a Structural Fill soil cushion that would attenuate the potential differential swelling of the shale;
- Construction of a reinforced soil layer to support the overlying reinforced concrete slab.

This design alternative would need to consider variable uplift displacement and pressures of the pyritic shale balanced against soil cushion thickness and/or geogrid reinforcement requirements. The benefit of this alternative is that a conventional shallow foundation design and construction can be employed rather that the deep foundation design, which could yield schedule benefits. However, the alternative design will generate a significantly greater volume of unsuitable 'waste' rock and required an associated increase volume of soil import.

Slope Design

We recommend that cut and fill slopes be designed with a slope angle of two and a half horizontal to one vertical (3H:1V) or flatter. Vegetative cover should be established on the slope surface as soon as practical after final grading to reduce the potential for erosion and soughing failures. Inboard slopes of stormwater basins should be graded to a slope of 3H:1V or flatter and seeded to establish vegetative cover.

If slope angles up to 1H:1V are proposed, then the slopes should be constructed with Structural Fill with reinforced with a geogrid or similar reinforcement. The 1H:1V fill slope should be designed by a Professional Engineer licensed to practice in the State of New York and the design should be reviewed by Sanborn Head. Geogrid, or similar reinforcement, should be installed in accordance with the manufacturer's specifications, including anchoring and embedment at the toe of the slope as appropriate. For erosion control, the face of the 1H:1V fill slopes may be covered with a vegetated mesh or blanket system, such as Tensar's Sierra slope reinforcement system, or approved equivalent.

Stormwater swales or curbing should be provided at the crest of soil cut and fill slopes to intercept and divert the runoff away from the slope face. Additionally, a drain and swale should be constructed at the base of the proposed bedrock cut face to intercept groundwater that may come perched on the bedrock.

Retaining Wall Design

We anticipate that segmental retaining walls can be used to support access roads and parking areas as an alternative to steep slopes. A segmental retaining wall system consists of a mortarless block face fastened to geogrid that extends into a granular backfill creating a zone of reinforced earth, which together behaves as a gravity wall. Geogrid elements typically extend

behind the wall approximately 0.7 times the height of the wall for level backfill and approximately 0.7 to 0.9 times the height of the wall for sloping backfill.

We understand that the subsurface infiltration systems are proposed to be constructed below the paved parking and drive aisles located to the northeast and west of the proposed building. It should be noted; segmental retaining walls are not designed to withstand hydrostatic pressure (water buildup) and stormwater runoff should be diverted away from the retaining wall area. Several wall design features (e.g., stone or geo-composite chimney drain, a impermeable geomembrane at the rear of the reinforced soil zone, base drains, and increased frequency of weepholes behind the retaining wall faces) alone or in combination, may be required to alleviate the potential of hydrostatic pressure adversely affecting the wall stability and performance. The outlets from the drainage system should discharge to the ground surface downhill and away from the retaining wall. Given the fine-grained nature of the Site soil, riprap (see table 1) or similar along the toe of the wall may be required to reduce erosion by the water draining from behind the wall.

An acceptable foundation subgrade for segmental retaining walls shall consist of either Structural Fill compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C placed over the undisturbed glacial till. Where bedrock subgrades are encountered the exposed bedrock subgrade shall be sealed from oxygen using a bituminous sealant, or an approved equivalent, a 6-inch-thick (minimum) Lean Mat Concrete layer, and a 12-inch-thick layer of Structural Fill soil cushion to proposed bottom of wall subgrade.
We recommend that retaining walls greater than 4 feet in height be designed by a Professional Engineer licensed to practice in the State of New York. Sanborn Head should be retained to review the retaining wall design. A global stability and seepage analysis should be performed during the design phase to evaluate the overall wall stability and hydrostatic conditions behind the wall. If authorized, then Sanborn Head can perform a global stability and seepage analysis once site grades are finalized.

The design of retaining walls should use the following recommended parameters as well as building foundation loads as applicable:

Exhibit 1 – Recommended Retaining Wall Design Parameters

Material	Moist Unit Weight (pcf)	Internal Friction Angle (degrees)	Cohesion (psf)
Reinforced Fill (Engineered Fill)	130	34	0
Retained Soil (On-Site glacial Till)	130	28	0
Retained Soil (On-Site Clay and Silt Soil)	120	28	500
Backfill Slope Angle Behind Wall – 3:1H:1V or flatter. Slope Angle Below Wall – 3H:1V or flatter Traffic Surcharge Design Load Behind Wall – 250 psf Min. Factor of Safety for Global Stability – 1.5 Min. Factor of Safety Against Overturning – 2.0 Min. Factor of Safety Against Sliding – 1.5 Min. Factor of Safety Against Geogrid Tensile Overstress – 1.5			

Min. Factor of Safety Against Geogrid Pullout from Soil – 1.5 Seismic Design Load – Per BCNYS. Net Allowable Soil Bearing Pressure – Not to exceed 5,000 psf

Seismic Design Criteria

The BCNYS incorporates the 2018 International Building Code (IBC) by reference with base code amendments specific to New York. We recommend using the following design parameters as defined by the BCNYS and the IBC:

- Seismic Site Class: Based on the proposed building location, elevation, and available subsurface information, **Site Class "C"** is recommended for the proposed building.
- Design earthquake spectral response accelerations: S_{DS} = 0.199g and S_{D1} = 0.054g.

Lateral Earth Pressures

Below grade walls restrained from rotation, with a horizontal backfill surface, and no groundwater should be designed based on an "at-rest" lateral earth pressure of 60 pounds per cubic foot (pcf).

Below grade walls that are unrestrained at the top and allowed to rotate at least 0.002 times the height of the wall should be designed based on an "active" lateral earth pressure of 40 pcf.

Below grade walls should be designed to resist lateral earth pressure from a seismic event as required by Section 1605.3.1 of the BCNYS.

To evaluate sliding resistance, a coefficient of friction of 0.50 is recommended for cast-in-place concrete on granular soil (or 0.55 for cast-in-place concrete on clean gravel). The passive resistance inside the building and below the floor slab should be modeled as an equivalent fluid pressure of 460 pcf. These frictional resistance and passive resistance values should be considered ultimate strength values, and an appropriate factor of safety should be applied for the sliding analysis. Figures 4 and 5 provide recommended earth pressure diagrams for below grade wall design.

Foundation Drains

Due to the shallow bedrock encountered within the proposed warehouse building footprint. To control groundwater that may be perched above the bedrock, we recommend that the sub-slab drains be installed below the structural slab and perimeter drains adjacent to exterior footings. The subslab drains should consist of a 12 inches layer of Crushed Stone and a minimum 10-mil-thick vapor barrier. The perimeter drains should consist of 4-inch-diameter perforated pipe surrounded by at least 12 inches of Crushed Stone wrapped with nonwoven geotextile as specified in Table 1 – Material Specifications. Additionally, we recommend evaluating the installation of drainage board or the use of free-draining materials, such as Structural Fill as specified in Table 1 – Material Specifications to assist in collecting and directing groundwater towards foundation drains.

Pavement Design and Earthwork Recommendations

The following provides recommendations for pavement design and earthwork in pavement areas.

Subgrade Preparation Procedures for Pavement Areas

The pavement areas should be prepared as follows:

- Vegetation, topsoil, organic matter, and other unsuitable materials should be removed to expose the top of the existing, inorganic natural glacial till subgrade.

- The Site should be graded to direct stormwater away from entering the work areas or ponding on the exposed soil subgrade. The exposed subgrade soils may be sensitive to disturbance and strength degradation in the presence of excess moisture. Construction traffic over the exposed soil subgrade should be limited to the extent practical. The subgrade soil should also be considered frost susceptible.

- Prior to placing fill, the subgrade should be proof-compacted with at least 4 passes of a 10-ton vibratory roller under the observation of a qualified geotechnical engineer, or their representative. Soft or loose zones identified by the proof compaction should be evaluated by excavation and replaced with compacted Structural Fill as necessary. Proof compaction may be waived in the field by the qualified geotechnical engineer, if in their opinion, the proof compaction will cause disturbance to the subgrade.

- General raise-in-grade fill to be placed up to subgrade for pavement base course in proposed pavement areas should consist of Structural Fill. This material should be placed in loose lifts not exceeding 12 inches thick and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

- In the southern and western loading dock, driveways, and parking lot at proposed pavement subgrade locations, bedrock should be removed to at least 36 inches below the proposed bottom of pavement section to allow for the application of a bituminous sealant, or an approved equivalent, to seal the exposed bedrock subgrade from oxygen, a 6-inch minimum Lean Mat Concrete, and a 30-inch Structural Fill soil cushion to proposed pavement subgrade prior to placement of base course materials.

  Alternatively, a slab 'deck' may be evaluated to span both rock cut areas and proposed fill areas for the portion of the proposed pavement areas in the southern and western pavement and loading dock areas, supported on a bi-directional slab, incorporated into the building design, and support on drilled shafts. This alternative may reduce the total length required for soil retention by retaining walls and provide reuse potential for unsuitable rock.

- Construct the appropriate pavement cross-section (standard-duty or heavy-duty) at locations identified on plans prepared by others. The base course layer should be placed and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

Asphalt (Flexible) Pavement Design

The asphalt (flexible) pavement design is intended to strike a balance between performance and cost after considering the soil available at the Site and assumed traffic loads for the proposed use as a warehouse with significant loading dock functions, and the frost susceptible nature of the on-site soils. We recommend the following asphalt pavement cross-sections for standard-duty and heavy-duty applications.

Exhibit 2 – Asphalt (Flexible) Pavement Design

Layer	Thickness	
	Standard Duty (Car Parking)	Heavy Duty (Access Roads/Loading)
Asphalt Wearing Course	2.0 inches	2.5 inches
Asphalt Binder Course	3.5 inches [2.0][1]	4.0 inches [2.5][1]
Pavement Base Course (Subbase Course Type 1, NYSDOT Item 733-0401)	12 inches	12 inches

Notes:

1. An alternative reduced material thickness is shown in brackets [ ] and may be used provided the project team elects to install Tensar TX7 (or similar) Geogrid Reinforcement.

Rigid (Portland Cement Concrete) Pavement Design

We recommend the following cross-sections for standard-duty and heavy-duty rigid pavement applications:

Layer	Thickness	
	Standard Duty	Heavy Duty
Portland Cement Concrete (Unreinforced 4,000 psi)	6 inches	8 inches
Pavement Base Course (Subbase Course Type 1, NYSDOT Item 733-0401)	12 inches	12 inches

Crack control joints should be installed at a spacing of no more than 15 feet on center for rigid pavements.

Please note that some frost-heave should be expected below unheated areas unless four (4) feet of non-frost susceptible material (e.g., Crushed Stone) is provided. A minimum of 12 inches of Crushed Stone (or similar non-frost susceptible soil) may be considered as base course below sidewalks and landscape pavers, especially at building entrances. Under no circumstance should on-site fill be used as base course below sidewalks or pavement; base course should consist only of those materials described herein.

ADDITIONAL ANALYSIS

As part of the on-going consideration for foundation alternatives, Sanborn Head recommends performing additional analysis by way of “Free Swelling Tests” on the existing pyritic shales, in

order to estimate total displacement due to swelling for the design of the void space below the proposed slab and to provide benchmarking of the uplift forces due to swelling for the design of drilled shafts or thickened Structural Fill soil cushion design alternatives. Free Swelling Tests will likely include the collection of bulk rock samples (by mechanical removal), placement under unconfined conditions or oedometric conditions (i.e., radially constrained) and systematic measurement. Field vs laboratory setting, duration and additional variables, such as frequency of water and/or air exposure, can be considered for benchmarking.

CONSTRUCTION MONITORING

We recommend that Sanborn Head be provided the opportunity to review the design drawings and specifications to verify that the recommendation of this report were appropriately incorporated. We further recommend that Sanborn Head be retained to observe earthwork operations and blasting, perform quality control testing on compacted fill, observe foundation subgrade preparation and retaining wall construction, and assist in the development of design changes should subsurface conditions differ from those anticipated prior to the start of construction.

We appreciate the opportunity to be of service on this project. As design progresses or changes, additional explorations or information may be required prior to issuing a final geotechnical report. Please contact Luke Norton by phone at (978) 577-1030 or via email at lnorton@sanbornhead.com should you need additional information or wish to discuss the contents of this report.

Very truly yours,
SANBORN, HEAD ENGINEERING, P.C.

Table

TABLE 1
MATERIAL SPECIFICATIONS
Proposed Amazon ARS Facility – MSV1
Florida, New York

Structural Fill to be used as raise-in-grade fill below buildings shall consist of hard, inert, durable gravel and sand that is free from ice and snow, roots, surface coatings, sod, loam, clay, rubbish, and other deleterious or organic matter. It shall conform to the material and gradation requirements as specified below. On-Site Fill may be used as Structural Fill provided weather conditions are favorable for recompaction to the specified density.

Sieve Size	Percent Passing by Weight
4-inch	100
1-inch	85-100
No. 4	50-100
No. 40	20-75
No. 200	0-12

On-Site Fill to be used for general raise-in-grade fill in building and pavement areas below the base course layer shall consist of inorganic soil from on-site cut areas and shall be free from ice, snow, roots, sod, loam, clay, rubbish, and other deleterious matter and shall be well-graded within the following gradation requirements:

Sieve Size	Percent Passing by Weight
8-inch	100
1-inch	85-100
No. 4	30-90
No. 40	10-60
No. 200	0-35

**Maximum particle size shall be 4 inches where fill is placed within 3 feet of the building finished floor elevation.*

Base Course for Pavement (Subbase) to be used as the base course layer directly beneath the asphalt binder course in pavement areas shall conform to the material and gradation requirements for Subbase Course, Type 1 (NYSDOT Item 733-0401).

Crushed Stone to be used as base course beneath the slab, for stabilizing footing subgrades, as drainage stone around perforated pipe shall consist of hard durable processed 1-inch crushed stone that meets the requirements for NYSDOT Item 703-02, Coarse Aggregate Size No. 2, in the Standard Specifications.

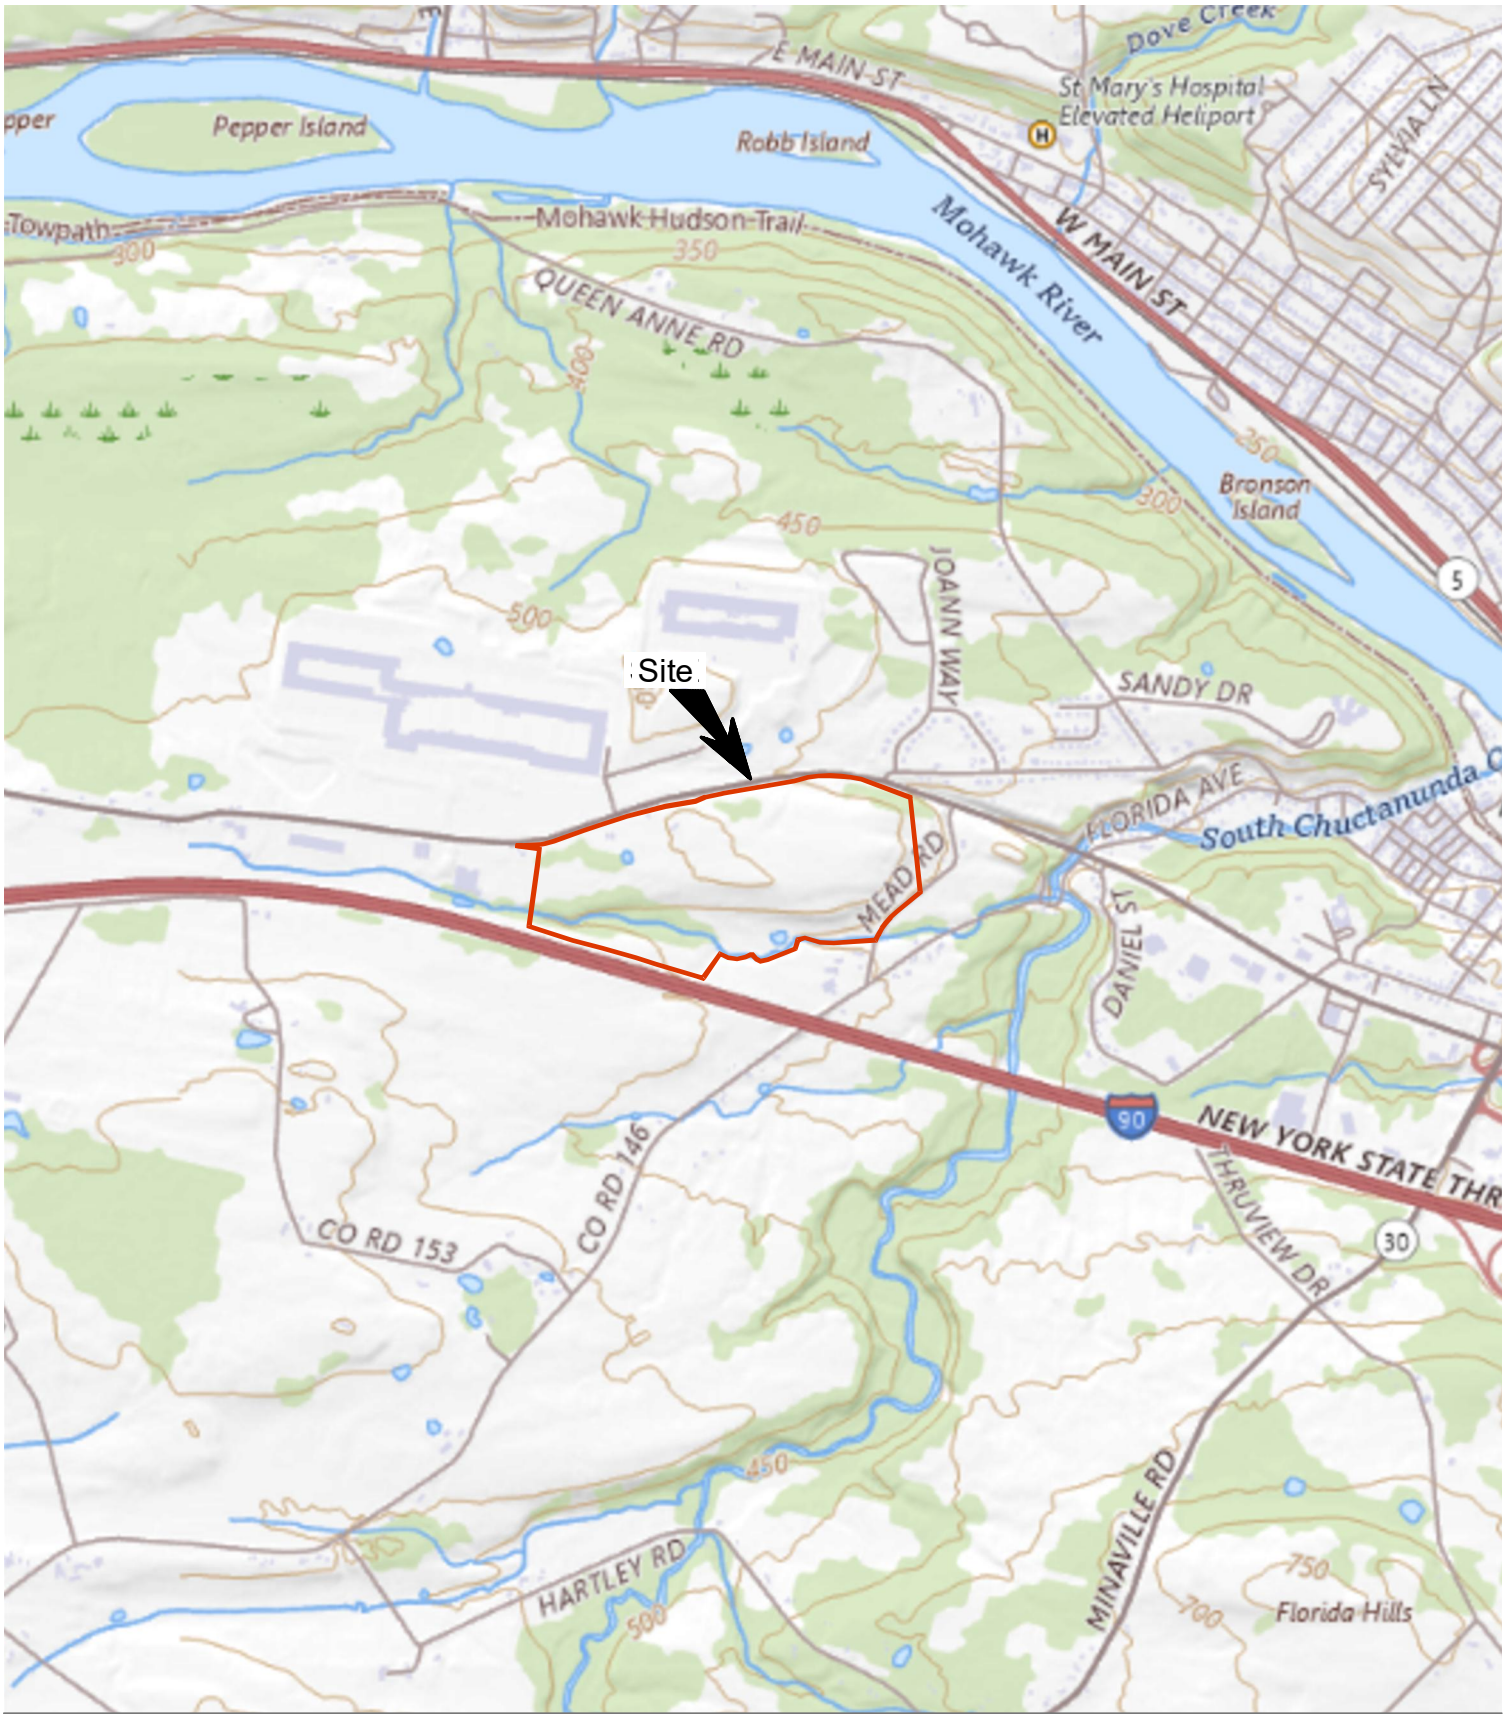
Riprap to be used where specified on the drawings shall consist of sound, durable stone, free from structural defects with approximately one reasonably flat side for top surface. The stone shall meet the requirements for Riprap, NYSDOT Item 733-22. These requirements are that each stone shall weigh not less than 100 pounds, and at least 50 percent of the total shall consist of stones weighing not less than

300 pounds each. The riprap shall not be dropped onto the underlying geotextile from a height greater than 1 foot.

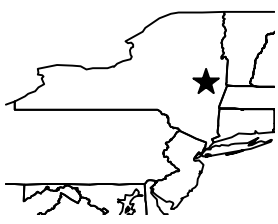
Geotextile for Riprap to be placed beneath Riprap and where shall consist of a woven polypropylene fabric with a puncture resistance (ASTM D4833) of at least 120 pounds and an apparent opening size (ASTM D4751) of 0.5 millimeters (No. 70 sieve size), or less, such as Mirafi 600X, or approved equivalent.

Geotextile shall consist of a nonwoven polypropylene fabric having a Puncture Resistance (ASTM D4833) of at least 65 pounds, a Permittivity (ASTM D4491) of at least 130 gal/min/sf, and an Apparent Opening Size (ASTM D4751) of 0.15 to 0.22 millimeters such as Mirafi 140N, or Contech C-40NW, or approved equivalent.

Lean Mat Concrete to be used to seal exposed competent Shale bedrock subgrades and shall consist of a ratio of 1:3:6 or 1:4:8 (Cement:Sand:Aggregate) with a compressive strength of 1000 to 2000 psi at 28 days.



Flowable Fill to be used to backfill irregularly shaped excavations or to fill abandoned subsurface utilities shall consist of high slump Portland cement concrete with a compressive strength of 100 to 150 psi at 28 days.



Perforated Pipe to be used behind retaining walls and for foundation drains shall consist of perforated, corrugated, dual wall high-density polyethylene (HDPE) such as ADS N-12 or Schedule 40-PVC pipe, or their equivalents. The perforation size shall be compatible with the specified Crushed Stone particle size.

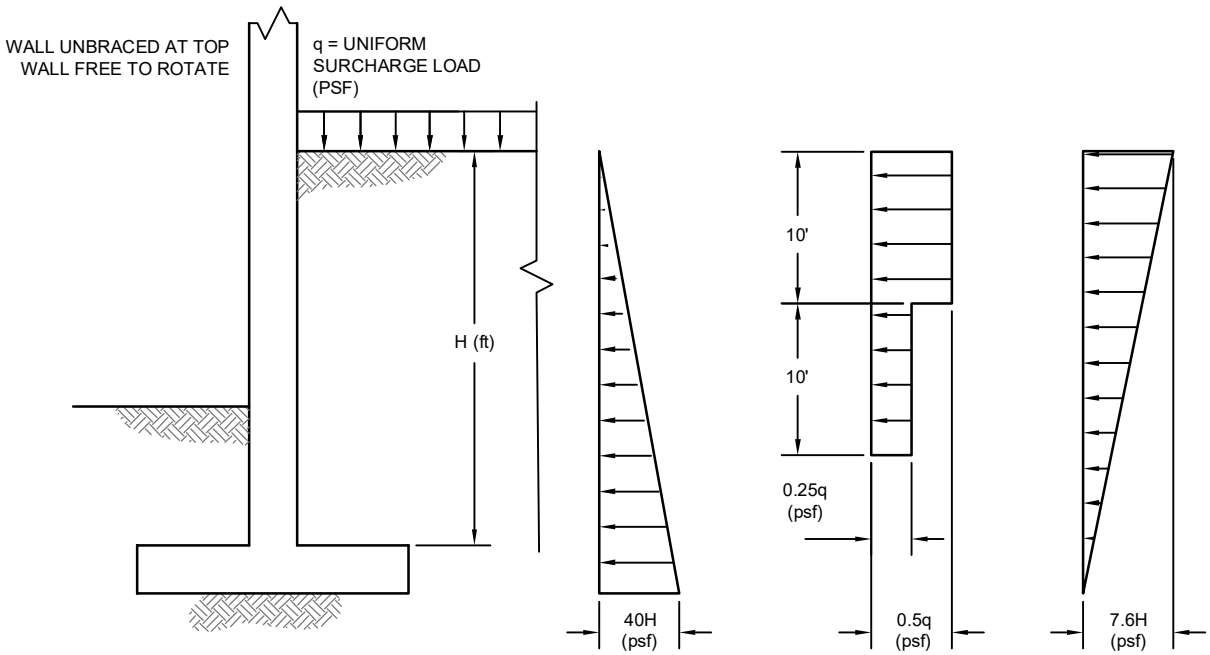
AT-REST LATERAL EARTH PRESSURE | SURCHARGE (SEE NOTES 4 & 5) | SEISMIC (SEE NOTE 6)



NOTES:

1. LOADS ASSUME FOUNDATION WALLS ARE DESIGNED TO LIMIT WALL ROTATION.
2. PRESSURE DISTRIBUTIONS ASSUME FOUNDATION WALL BACKFILL ON-SITE PREPARED AS SPECIFIED IN ACCORDANCE WITH THE RECOMMENDATIONS PRESENTED HEREIN.
3. PRESSURE DISTRIBUTIONS ASSUME SOIL BEHIND WALLS IS DRAINED. THEREFORE NO HYDROSTATIC PRESSURE IS DEVELOPED BEHIND WALLS.
4. FOUNDATION WALL SHOULD BE DESIGNED TO SUPPORT A TEMPORARY CONSTRUCTION SURCHARGE PRESSURE DEPENDING ON THE WALL LOCATION AND FUNCTION. IT IS RECOMMENDED THAT A UNIFORM SURCHARGE LOAD OF 250 PSF IS ASSUMED IF HEAVY COMPACTION EQUIPMENT IS TO BE USED.
5. IGNORE SURCHARGE LOADS BELOW A DEPTH OF 20 FEET.
6. BASED ON THE BUILDING CODE OF NEW YORK STATE. 2020 EDITION, AND TOTAL UNIT WEIGHT OF 135 PCF, USE 7.6H FOR SEISMIC SITE CLASS "C".
7. SLIDING FRICTION COEFFICIENT OF 0.50 IS RECOMMENDED FOR THE WALL FOOTING BEARING ON INORGANIC, GRANULAR SOIL. THE RESULTING RESISTANCE FORCE SHOULD BE CONSIDERED AN ALLOWABLE STRENGTH VALUE.
8. A PASSIVE EARTH PRESSURE OF 460H SHOULD BE USED IN LOCATIONS THAT WILL NOT BE SUBJECT TO FUTURE EXCAVATION OR DISTURBANCE. THE RESULTING RESISTANCE FORCE SHOULD BE CONSIDERED AN ULTIMATE STRENGTH VALUE.

Limitations

APPENDIX A
LIMITATIONS

Explorations

1. The analyses, recommendations, and designs submitted in this report are based in part on the data obtained from subsurface explorations. The nature and extent of variations between these explorations may not become evident until construction. If variations then appear evident, it will be necessary to re-evaluate the recommendations of this report.
2. The generalized soil profile described in the text is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were developed by interpretation of widely spaced explorations and samples; actual soil transitions may be more or less gradual than indicated. For specific information, refer to the test boring logs.
3. Water level readings were made in the drill holes at the times and under the conditions stated on the exploration logs. These data were reviewed and interpretations were made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, and other factors differing from those occurring at the time measurements were made.

Review

4. In the event that any changes in the nature, design, or location of the proposed building are planned, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed, and conclusions of the report modified or verified in writing by Sanborn Head.

Construction

5. It is recommended that Sanborn Head be retained to provide geotechnical engineering services during the excavation and earthwork construction phases of the work. This is to observe compliance with the design concepts, specifications, or recommendations and to allow design changes in the event that subsurface conditions differ from those anticipated prior to the start of construction.

Use of Report

6. This report was prepared for the exclusive use of BMG Albany LLC for the proposed Amazon ARS Facility in Florida, New York, in accordance with generally geotechnical engineering practices. No other warranty, expressed or implied, is made.
7. This report was prepared for this project by Sanborn Head for preliminary design purposes only and is not sufficient to prepare an accurate bid. Contractors wishing a copy of this report may secure it with the understanding that its scope is limited to preliminary design considerations only.

Groundwater Readings

Date	Time	Depth to Water	Ref. Pt.	Depth of Casing	Depth of Hole	Stab. Time
06/24/08	09:45	10.0'	Ground	27'	27'	<5 min
06/25/08	14:50	12.0'	Top of PVC	Well Installed	50'	15 min
07/03/08	13:00	12.2'	Top of PVC	Well Installed	50'	8 days

Depth (ft)	Casing Blows (per ft)	Drill Rate (min/ft)	Sample Information					Stratum		Geologic Description	Well Diagram	Well Description
			Sample No.	Depth (ft)	Spoon Blows per 6 in	Pen/ Rec (in)	Field Testing Data	Log	Description			
1	2	3	4	5	6	7	8	9	9	10	11	11

1. The numbers in this column report the depth in feet below ground surface.

2. The numbers in this column report the number of blows required to drive the drill casing one foot using a 300 pound hammer, unless otherwise specified.

3. The numbers in this column report the rate of advance when coring rock.

4. The values in this column report the sample designation. In the example S-1, "S" indicates the sample type and "1" indicates the sample number.

"S" indicates split spoon sample
"U" indicates Shelby tube sample
"C" indicates rock core sample
"G" indicates grab sample

5. The numbers in this column report the depth, in feet, from the ground surface of the sample identified in column 4.

6. The numbers in this column report the number of blows required to drive a split spoon sampler 6 inches using a 140 pound hammer free falling 30 inches. The standard split spoon sampler is 1-3/8 inch inside diameter and 2 inches outside diameter. The Standard Penetration Resistance, or N-value in blows per foot, is the sum of the blows recorded over the second and third 6-inch interval.

A number followed by "/3" indicates the distance that the sampler advanced. For example "100/4" indicates that 100 blows of a 140 pound hammer falling 30 inches advanced the sampler 4 inches. "WOR/24" indicates the weight of the drilling rods without the hammer caused the sampler to advance 24 inches.

"WOH" indicates the static weight of the 140 pound hammer and the drilling rods attached to the split spoon sampler were sufficient to cause the sampler to advance.

"WOR" indicates the static weight of the drilling rods attached to the split spoon sampler was sufficient to cause the sampler to advance.

7. The values shown are the length of the soil or rock core sampler penetration and the number of inches of sample recovered from the sampler.

8. The values shown are the results of field tests performed on soil or rock samples. The test method, result and units are indicated. Unless otherwise noted "ND" denotes not detected.

9. These columns provide a graphic illustration and verbal description of the subsurface soil and rock strata. The depths of strata changes should be considered approximate and general in nature, actual strata changes in the field may be more gradual.

10. Descriptions of soil samples include:

- the density or consistency;
- color;
- a listing of MAJOR and minor soil components based on particle size and plasticity;
- structure,
- moisture; and
- other pertinent characteristics.

For example: Medium dense, brown, fine to medium SAND, trace Silt. Stratified. Moist. Faint petroleum odor.

Description of rock core samples include:

- hardness, weathering, rock continuity, color, texture, rock type, structure; and RQD (%)

For example: Hard to very hard, slightly weathered, grey-green, fine grained, RHYOLITE, with joints spaced 4 to 12 inches apart and dipping from near horizontal to approximately 60°. Open crack in core at 14.4', moderately fractured . RQD=58%

NOTE: "RQD" is defined as the summation of all pieces of rock core greater than 4 inches in length divided by the length of the core run and expressed as a percentage.

11. Monitoring well materials or other equipment installed within the borehole are graphically presented in these columns. If no equipment was installed, these columns are used for notes, remarks or other pertinent observations.

(c) 2013 Sanborn, Head & Associates, Inc.

Description and Classification of Soil

1. Density or Consistency: The density or consistency of a soil sample is based on the Standard Penetration Test N-value according to the following table:

Density of Granular Soil	SPT N-Value		Consistency of Cohesive Soil
Very Loose	0-4	<2	Very Soft
Loose	5-10	2-4	Soft
Medium Dense	11-30	5-8	Medium Stiff
Dense	31-50	9-15	Stiff
Very Dense	>50	16-30	Very Stiff
		>30	Hard

The Standard Penetration Resistance, or N-value in blows per foot, is the sum of the blows recorded over the second and third 6-inch interval.

A number followed by "/3" indicates the distance that the sampler advanced. For example "100/4" indicates that 100 blows of a 140 pound hammer falling 30 inches advanced the sampler 4 inches. "WOR/24" indicates the weight of the drilling rods without the hammer caused the sampler to advance 24 inches.

"WOH" indicates the static weight of the 140 pound hammer and the drilling rods attached to the split spoon sampler were sufficient to cause the sampler to advance.

"WOR" indicates the static weight of the drilling rods attached to the split spoon sampler was sufficient to cause the sampler to advance.

2. Color: The color of a soil sample is based on visual observation.

3. Soil Components

A. Description: The components of a soil sample are described by visually estimating the percentage of each component by weight of the total sample using a Modified Burmister System.

i. Major Component: The major soil component is written with upper case letters for granular soil (e.g., SAND, GRAVEL) and a combination of upper and lower case letters for fine grained soil (e.g., Silty CLAY, Clayey SILT).

ii. Minor Component: The minor soil components are written with the first letter of each soil type in upper case, and the remaining letters in lower case (e.g., Gravel, Silt). The minor components are identified and prefaced in the description based on the following percentages:

Preface	Percentage
and	35-50
some	20-35
little	10-20
trace	0-10

iii. Note: The actual percentages of gravel soil may differ from that measured when sampling with a standard split spoon sampler because of the relatively small sampler diameter. Also, it is not possible to identify the presence of boulders and cobbles using a standard split spoon sampler.

B. Definitions

i. Granular Soil: A granular soil sample is defined by the following particle sizes as referenced to a standard sieve:

Material	Description	Standard Sieve Limit	
		Upper	Lower
Boulders	C-sized	--	36 inch
	B-sized	36 inch	24 inch
	A-sized	24 inch	12 inch
Cobbles	--	12 inch	3 inch
Gravel	coarse	3 inch	3/4 inch
	fine	3/4 inch	No. 4
Sand	coarse	No. 4	No. 10
	medium	No. 10	No. 40
	fine	No. 40	No. 200

ii. Fine Grained Soil: The degree of plasticity of fine-grained soils is defined as follows:

Material	Degree of Plasticity	Plasticity Index (PI)	Smallest Thread Diameter (in.)
SILT	Non-Plastic	0	None
Clayey SILT	Slight	1 to 5	1/4
SILT & CLAY	Low	5 to 10	1/8
CLAY & SILT	Medium	10 to 20	1/16
Silty CLAY	High	20 to 40	1/32
CLAY	Very High	40+	1/64

iii. Organic Soil: An organic soil sample is classified by observation of the sample structure as follows:

Material	Description
TOPSOIL	Surficial soils that support plant life and which contain organic matter.
SUBSOIL	Soil underlying the topsoil which may contain roots or plant fibers.
PEAT	Deposits of plant remains in which the original plant fibers or root structure are visible.
ORGANIC SILT	Deposit of plant remains in which the original plant fibers or root structure have decomposed.

iv. Non-Soil Constituents: Non-soil constituents (artificial or anthropogenic material, organic materials, cobbles and boulders) are described as follows:

The following terminology is used to denote size ranges of non-soil constituents such as man-made objects or fill material:

Descriptive Term	Size Range	Comparative Term
Specks	< No. 200 Sieve	Silt and Clay fines
Particles	No. 200 Sieve to No. 4 Sieve	Sand
Fragments	No. 4 Sieve to 3 in.	Gravel
Pieces	3 in. to 12 in.	Cobbles
Blocks	> 12 in.	Boulders

The following terminology is used to describe the frequency that a non-soil constituent is observed by estimating the percentage of the constituent by weight of the total sample:

Descriptor	Percentage
very few	0-5
few	5-10
common	10-20
frequent	20-35
numerous	35-50

4. Moisture Content: The moisture content of a soil sample is based on the observable presence of water according to the following table:

Dry	Moisture is not apparent, dusty.
Moist	No visible water.
Wet	Visible free water.

5. Other Pertinent Characteristics: Pertinent characteristics observed in a soil sample should be noted according to the following table:

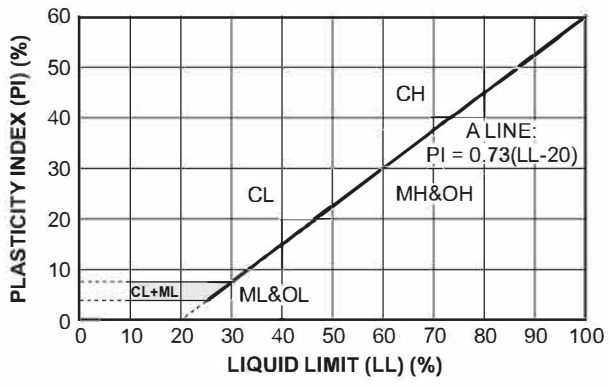
Soil Structure Produced by Deposition of Sediments	
Stratified	Random soil deposits of varying components of color.
Varved	Alternating soil deposits of varying thickness (i.e., clays or silts).
Stratum	Soil deposit > 12 inches thick.
Layer	Soil deposit 3 inches to 12 inches thick.
Seam	Soil deposit 1/8 inch to 3 inches thick.
Parting/Lens	Soil deposit <1/8 inch thick.

(c) 2018 Sanborn, Head & Associates, Inc.

UNIFIED SOIL CLASSIFICATION SYSTEM (USCS)LEGEND AND SYMBOLOGY

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)		
		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)		
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)		
		SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)		
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils



LABORATORY CLASSIFICATION CRITERIA

GW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
GP	Not meeting all gradation requirements for GW	
GM	Atterberg limits below "A" line or P.I. less than 4	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols
GC	Atterberg limits above "A" line with P.I. greater than 7	
SW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
SP	Not meeting all gradation requirements for GW	
SM	Atterberg limits below "A" line or P.I. less than 4	Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols.
SC	Atterberg limits above "A" line with P.I. greater than 7	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

Less than 5 percent ..... GW, GP, SW, SP
More than 12 percent ..... GM, GC, SM, SC
5 to 12 percent ..... Borderline cases requiring dual symbols

Bulk Density and Compressive Strength of Rock Core Specimens by ASTM D7012 Method C

Boring ID	Sample Number	Depth	Bulk Density, pcf	Compressive strength, psi	Failure Type	Meets ASTM D4543	Note(s)
---	SH-10 C1	11.4-11.8 ft	164	21393	1	No	1,*

Notes: Density determined on core samples by measuring dimensions and weight and then calculating.

All specimens tested at the approximate as-received moisture content and at standard laboratory temperature.

The axial load was applied continuously at a stress rate that produced failure in a test time between 2 and 15 minutes.

Failure Type: 1 = Intact Material Failure; 2 = Discontinuity Failure; 3 = Intact Material and Discontinuity Failure (See attached photographs)

1: Best effort end preparation. See Tolerance report for details.
2: The as-received core did not meet the ASTM side straightness tolerance due to irregularities in the sample as cored.
3: Specimen L/D < 2.
4: The as-received core did not meet the ASTM minimum diameter tolerance of 1.875 inches.
5: Specimen diameter is less than 10 times maximum particle size.
6: Specimen diameter is less than 6 times maximum particle size.

*Because the indicated tested specimens did not meet the ASTM D4543 standard tolerances, the results reported here may differ from those for a test specimen within tolerances.

PISP of material: 50

Remarks:

The rock core sample received presents the following characteristics:

- Length : 120 mm
- Diameter : 47 mm
- Weight : 619 g
- This type of rock presents a moderate to high swelling potential, according to BNQ 2560-511 Standard.
- Strong reaction to HCl 10 %.
- No sign of sulfide oxidation, no sign of sulfation.

Appendix I – NRCS Soil Survey

Appendix J – Hydraulic Calculations

Appendix K – Geotechnical Report

1) CONTACT INFORMATION / RESPONSIBLE PARTIES

a) Summary of Requirements

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared in accordance with the requirements set forth in the New York State Department of Environmental Conservation's SPDES General Permit for Stormwater Discharges from Construction Activity (GP-0-25-001). The General Permit authorizes stormwater discharges to the surface waters of New York State from construction related activities.

The project involves soil disturbance of one (1) or more acres of land and meets the requirements outlined in Appendix B, Table 2 of the General Permit, which requires the preparation of a SWPPP that includes both erosion and sediment control and post-construction stormwater management practices. This SWPPP describes the erosion and sediment control practices and, where required, the post-construction stormwater management practices that will be used and/or constructed to reduce the pollutants in stormwater discharges. This SWPPP also identifies potential sources of pollution which may be reasonably expected to affect the quality of stormwater discharges.

b) Construction Stormwater Team

As required by Part III.A.7 of the GP-0-25-001, the Owner/Operator must identify the contractor(s) and subcontractor(s) responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. At least one (1) person from each of the contractors and subcontractors shall be identified as responsible for implementation of the SWPPP and will be known as the Trained Contractor. The Trained Contractor(s) shall be on site daily when soil disturbance activities are being performed.

The Trained Contractor(s) who will be engaged in construction activities at the site are responsible for completing the Contractor Certification Form included in the Appendix prior to construction.

c) Design Stormwater Team

As required by Part III.A.1&4 of the GP-0-25-001, the Owner/Operator must prepare a SWPPP that documents the selection, design, installation, implementation and maintenance of the control measures and practices that will be used to meet the design requirements outlined in the General Permit. Furthermore, SWPPP's that require the post-construction stormwater management practice component shall be prepared by a Qualified Professional as defined in the General Permit.

The Owner/Operator and Qualified Professional have been identified as the following:

Name	Address	Responsibility
BMG Albany, LLC	One Tower Bridge, 100 Front Street, Suite 1225 West Conshohocken, PA 19428	Owner/Developer

Bohler Engineering	17 Computer Drive West Albany, NY 12205	Qualified Professional

2) SITE EVALUATION, ASSESSMENT AND PLANNING

a) Project/Site Information (Part III.B.1.c.i)

Site Name	MSV1 – Amazon Distribution Center
Address	Route 5S / Mead Road
City, State, Zip Code	Town of Florida
County	Montgomery County

Type of Construction: ☐Commercial ☐Industrial ☒Other Warehouse / Distribution

Size of Property	±137.2 acres
Total Area Expected to be Disturbed	±66.0 acres
Maximum Area to be Disturbed at Any One Time:	±66.0 acres

b) Site Location Map/Construction Drawings (Part III.B.1.c.ii)

The following drawings are included in this report and are bound under separate cover:

- **Site Survey** – Existing condition for the parcel including all required existing information (watercourses, topography, vegetation, utilities, property boundaries, etc.)
- **Site Plan** – Comprehensive plan of all proposed improvements and limits of disturbance.
- **Grading and Drainage Plan** – Plan illustrates existing and proposed slopes, proposed stormwater quantity and quality mitigation measures and limits of disturbance.
- **Utility Plan** – Plan includes detailed design information for the installation of all proposed utilities resulting in the disturbance of soil for this project.
- **Erosion and Sediment Control Plan** – Erosion and sediment control measures to be in place and inspected, prior to commencement of construction. The proposed measures were designed in accordance with the New York Guidelines for Urban Erosion and Sediment Control. Proposed measures include inlet protection, silt fence and/or silt sock, temporary stone outlet sediment traps, temporary swales, stabilized construction entrance, and construction sequencing.
- **Erosion and Sediment Control Details –** Plan contains all notes, details and construction sequencing necessary for the construction of the erosion control practices as shown on the Erosion and Sediment Control Plan.
- **Landscaping Plan** – Included is all proposed landscaping for the project.
- **Construction Details** – Included are all details associated with the post-construction stormwater management system.

c) Stormwater Discharges

The table below identifies all discharge points for stormwater leaving the project site.

Point of Discharge	Name of State receiving water	Is the receiving water on 303d list?	If yes, limiting pollutant
Design Point 1	South Chuctanunda Creek	No	N/A
Design Point 2	South Chuctanunda Creek	No	N/A
Design Point 3	South Chuctanunda Creek	No	N/A

d) Cultural Resources (Part I.A.4)

Construction activities that propose the disturbance of a property with historic significance are not covered by the General Permit. As such, documentation from the NYS office of Parks, Recreation, and Historic Preservation (OPRHP) has been included in the appendix stating that the proposed project will result in no impact to properties of historical significance.

e) Threatened and Endangered Species (Part I.A.3)

Construction activities that may adversely affect a species that is endangered, threatened, or of special concern are not covered by the General Permit. As such, documentation has been included in the appendix showing that the proposed project will not result in adverse impact to a species that is endangered, threatened, or of special concern.

f) AA or AA-s Classified Watersheds (Part I.A.8.b)

The project does not propose to disturb more than one acre of existing non-impervious area on steep slopes within a watershed of Surface of the State classified as AA or AA-s.

g) Consideration of Future Physical Risks Due to Climate Change (Part III.A.2)

Increasing Temperature: The subject project is proposing to minimize the impact of land alterations by reducing impervious areas where possible. For example, the project proposes to minimize drive aisle widths, minimize parking space size, and minimize the number of parking spaces to what is required to support the proposed use. Correspondingly, the project will maximize available greenspace and landscaping. These techniques both aid to decrease the adsorption of radiant heat from increasing temperatures.

Increasing Precipitation, Variability, and Severity of Storm Events: The subject project proposes a new stormwater management system that has been sized to collect and transport stormwater to downstream discharge points, while meeting or exceeding the requirements set forth for stormwater quality and quantity control measures. The storm pipe network will adequately transport stormwater, while accounting for both cost and efficiency of the project.

Rising Sea Level: The subject project is not located near, nor directly discharges to, low-lying costal areas which are at elevated risks of inundation during high tides.

Shifting Ecology: Due to the uncertainty of the ever-changing ecosystem, direct results & outcomes are uncertain. However, the subject project is proposing to incorporate the latest technologies in stormwater management practices that have been tested and approved by the NYSDEC.

3) EROSION AND SEDIMENT CONTROLS

a) Soils Description (Part III.B.1.c.iii)

Data supplied by the USDA Natural Resources Conservation Service (NRCS) indicates that site soils are primarily classified as:

USDA Soil Symbol	Hydrologic Group (HSG)	Texture	Character
AnB	D	Angola Silt Loam	Somewhat poorly drained
ApB	D	Appleton Silt Loam	Somewhat poorly drained
ChA	D	Churchville Silty Clay Loam	Somewhat poorly drained
DaB	D	Darien Silt Loam	Somewhat poorly drained
LaC	B	Lansing Silt Loam	Well Drained
Ma	D	Madalin Silty Clay Loam	Poorly drained
PaB	C	Palatine Silt Loam	Well Drained
PaC	C	Palatine Silt Loam	Well Drained
PaD	C	Palatine Silt Loam	Well Drained

The USDA NRCS Soil Survey is included in the appendix of this report.

b) Construction Phasing Plan (Part III.B.1.c.iv)

Construction sequencing, limits of clearing and grading, utility and infrastructure installation, and all other associated activities resulting in soil disturbance are detailed on the Erosion and Sediment Control, Grading and Drainage and Utility Plans. A recommended Construction Sequence has been included on the Erosion and Sediment Control Notes & Details sheet. Part I.E.6 of the SPDES General Permit for Stormwater Discharges from Construction Activity, requires written authorization from the New York State Department of Environmental Conservation (NYSDEC) prior to disturbing more than 5 acres of soil.

c) Minimum Soil & Erosion Control Measures (Part III.B.1.c.v)

The Soil and Erosion Control measures that are proposed to be implemented for this site are shown and detailed in the Site Development Plans (part III.B.1.c.vi). All practices are to be installed per requirements outlined in the NYSDEC Standards and Specifications for Erosion and Sediment Control (Blue Book). All practices shall be installed per the timeline outlined in the Construction Sequence and shall remain functional until the contributing areas have achieved 80% stabilization. The dimensions, material specifications, installation details and operation and maintenance

requirements are included on the Soil Erosion & Sediment Control Notes & Details Sheet included in the Site Development Plans (Part III.B.1.c.vii).

d) Soil Stabilization Plan (Part III.B.1.c.vi)

All temporary and permanent soil stabilization practices to be implemented at the subject Project are outlined in the Erosion & Sediment Control Plan included in the Site Development Plans. It is the responsibility of the General Contractor to identify any areas that are not adequately stabilized and provide adequate stabilization practices to address. As a guideline, any temporary or permanent slopes over 3:1 shall be stabilized using slope stabilization fabric installed per the manufacturer's guidelines. Any open soil that is not to be disturbed within 14 days shall be seeded or mulched. These practices shall remain operational until 80% establishment has been achieved.

e) Maintenance Inspection Schedule (Part III.B.c.viii)

Maintenance of the proposed erosion and sediment control practices are detailed on the Erosion and Sediment Control Plan. Included in this report are the SWPPP Observation and Operations and Maintenance Checklists. The owner/operator is ultimately responsible for inspection and maintenance during construction. Stabilization must be achieved prior to removal of temporary erosion and sediment control devices and filing of the NYSDEC Notice of Termination (NOT). The SWPPP Monitoring Professional must inspect and approve final stabilization prior to filing of the NOT. Following the NOT filing, which terminates permit coverage, the Property Owner or any subsequent owner shall follow the guidelines set forth in this report and will be responsible for operations and maintenance over the lifetime of the facility.

Operations and maintenance of this facility is the responsibility of the owner/operator. A designated representative shall conduct bi-annual inspections and keep a log of results and mitigation measures taken. This log shall be made available to the authority having jurisdiction upon their request. Maintenance shall depend mainly on inspection observations and all records should be sent to the Stormwater Program Manager as they are performed. Any deficiencies in the facility shall be corrected immediately upon discovery. Sediment removal shall occur as needed but at minimum twice yearly (if applicable). Cleaning of structures shall include the removal, and proper disposal, of all sand and debris from sumps. A qualified hauler, familiar in the proper disposal of waste shall dispose of sediment. Inspection forms and/or checklists in addition to maintenance procedures have been provided for use as part of this document.

f) Pollution Prevention Measures (Part III.B.c.ix)

The following activities are anticipated during construction and could have the potential to generate pollutants. All such activities are to be conducted in accordance with all applicable General Permit requirements and in accordance with industry-standard best management practices. An inventory of possible pollutants and their associated pollution prevention measure is listed below.

- Construction waste will be disposed in on-site construction dumpsters immediately. The dumpsters shall be located such that any stormwater runoff will be directed to a sediment trap.
- Any materials or chemicals considered to be hazardous shall be covered or stored in construction trailers to ensure no discharge to stormwater will occur.

- A concrete washout will be installed prior to any concrete being poured onsite. The washout will meet or exceed the requirements outlined in the Blue Book.
- Any spills that occur must be reported to the below contacts:

Contact	Name	Phone Number
NYSDEC Spills Hotline	NYSDEC	1-800-457-7362
Jurisdiction Contact	NYSDEC Region 4	1-518-357-2069

The proposed stormwater management system has been designed to minimize the offsite environmental impacts of potential pollutants from the proposed project. These pollutants can include sediments, nutrients, organic carbons, trace metals, chlorides, and bacteria. Sources of these pollutants include atmospheric deposits, leaking vehicle fluids, and windblown debris from adjacent areas. These pollutants are commonly found in urban stormwater runoff and their effects can be mitigated by the proper implementation of approved stormwater management practices.

g) Stormwater Discharges Associated with Non-Construction Activity (Part III.B.c.x)

Construction support activities located beyond the construction project area are not to be covered under this SWPPP and the Construction General Permit.

h) Deviation from Blue Book Standards (Part III.B.c.xi)

None of the proposed Soil Erosion & Sediment Control practices are proposed to deviate from the NYSDEC technical standards as outlined in the Blue Book. Any changes to the approved Soil Erosion & Sediment Control Plan that are made in the field during construction shall be documented and the Engineer of Record shall be informed.

4) POST CONSTRUCTION STORMWATER MANAGEMENT

(a) Introduction

The applicant, BMG Albany, LLC, is proposing to develop a 137.2-acre property located at Route 5S / Mead Road, in the Town/of Florida, Montgomery County, New York. The project will include construction of ±652,000 SF building (ground floor building footprint) along with associated parking, access drives, stormwater management, landscaping, and utilities. The proposed features are shown on the latest Site Plan Documents prepared by Bohler Engineering NY, PLLC.

This report will briefly discuss the proposed development and provide a detailed analysis of the existing and proposed site conditions and the proposed stormwater management system. Hydraulic calculations included in this report were generated for the 1-, 10- and 100-year storm events utilizing the SCS TR-20 and HydroCad Stormwater modeling software.

The following type II, 24-hour SCS rainfall distribution was applied to the calculations:

Rainfall Event	Depth (inches)
1-Year	2.19
10-Year	3.50
100-Year	5.68

Source: Cornell University data, “Extreme Precipitation in New York and New England”.

(b) Existing Conditions

The project site is primarily undeveloped with portions of asphalt associated with existing access drives to the site off Route 5S. Majority ground cover consists of Green areas with moderate to steep topography.

The existing project site has been divided into three (3) Watershed areas for analysis purposes. Watershed ground covers, flow paths, and design points are depicted in the Existing Conditions Watershed Areas Summary Table Below.

Watershed	Ground Cover	Flow Path	Discharge Point
E-1	Primarily grass areas	Sheet flow to shallow concentrated before discharging to onsite stream, eventual discharge to the 60” drainage culvert under the Mead Road right of way.	DP-1 (60” CMP under Mead Road)
E-2	Primarily grass and woods with portions of impervious areas	Sheet flow to shallow concentrated, eventual discharge to existing swale located within the Route 5S right of way	DP-2 (Swale within the Route 5S right of way)
E-3	Primarily woods and wetlands along with portions of grass and impervious areas	Sheet flow to shallow concentrated flow, discharge to onsite wetland before overflow into the culvert located within the Route 5S right of way.	DP-3 (24” RCP)

The existing watershed area, discharge points, and topography are illustrated on the Pre Development Drainage Area Map included in the appendix of this report.

(c) Proposed Conditions

The proposed development is designed to mimic the existing drainage patterns and reduce the discharge flow rate from the pre-developed to post-developed conditions.

The proposed project site has been divided into three (3) Watershed area(s) for analysis purposes. These watershed areas have been further divided into sub-catchments with unique flow paths. Ground covers, flow paths, and design points associated with proposed flows are depicted in the Proposed Conditions Watershed Areas Summary Table Below.

Watershed	Sub-Catchment	Ground Cover	Flow Path	Discharge Point
P-1	P-1(A)	Grass	Sheet flow to shallow concentrated before discharging to onsite stream, eventual discharge to the 60”	DP-1 (60” CMP under Mead Road)

			drainage culvert under the Mead Road right of way.

	P-3(B)	Grass, woods, wetlands, pavement	Sheet flow to shallow concentrated flow, discharge to onsite wetland before overflow into the culvert located within the Route 5S right of way.	DP-3 (24" RCP)

The proposed watershed areas, topography and flow paths are illustrated on the Post Development Drainage Area Map, included in the appendix of this report.

Stormwater from a portion of the proposed impervious cover, including the proposed trailer areas, is considered a 'Hot Spot' by NYSDEC and is sent to a treatment train consisting of a catch basins with a snout (oil/water separator) and a First Defense Hydrodynamic Separator Water Quality Treatment Unit before being discharged to the proposed stormwater management practices. The proposed treatment train has been approved by the NYSDEC as an appropriate pretreatment system for a hotspot prior to being treated by a standard practice.

(d) Stormwater Calculations

The proposed stormwater management system consists of the practices provided in the summary table below. The table below also shows the water quality treatment provided by each practice.

Practice	WQv Provided (CF)	RRv Provided (CF)
Filtration Bioretention 1 (F-5)	±18,056	±11,520
Filtration Bioretention 2 (F-5)	±21,098	±21,098
Filtration Bioretention 3 (F-5)	±8,787	±8,787
Filtration Bioretention 4 (F-5)	±1,786	±1,786
Micropool Extension Detention Pond (P-1)	±50,741	0
Underground Detention 1	±101,688	0
Underground Detention 2	±21,374	0

The table below shows the total required and proposed water quality and runoff reduction volumes for the overall project.

Treatment	Required (CF)	Provided (CF)	Percent Achieved (%)	Requirement Met? (Y/N)
Water Quality WQv	±212,555	±223,500	105	Y
Runoff Reduction RRv / RRv min	±42,779	±43,191	101	Y

Required and proposed Water Quality (WQv) and Runoff Reduction (RRv) calculations are provided on the standard GI Worksheets included within the appendix section of this report.

Onsite soil tests (test pits and borings) were observed for the subject project by Sanborn Head in February 2025. Testing information can be found in the Appendix portion of this report.

The proposed stormwater management system serves to mitigate the impact of the development. During major storm events, post-development peak rates are expected to be reduced from pre-development peak rates, as shown on the discharge quantity table(s) below.

Rainfall Event	Design Point 1		
	Existing (cfs)	Proposed (cfs)	% Reduction
1-year	±9.34	±3.44	63
10-year	±28.65	±27.84	3
100-year	±68.44	±66.72	2

Rainfall Event	Design Point 2		
	Existing (cfs)	Proposed (cfs)	% Reduction
1-year	±17.71	±2.94	83
10-year	±51.43	±21.34	59
100-year	±120.32	±100.49	16

Rainfall Event	Design Point 3		
	Existing (cfs)	Proposed (cfs)	% Reduction
1-year	±14.98	±12.39	17
10-year	±30.09	±25.20	25
100-year	±57.79	±50.47	13

The existing and proposed stormwater models, depicting peak flow rates for pre- and post-development conditions are included within the appendix portion of this report.

(e) Operations & Maintenance

Maintenance of the proposed erosion and sediment control practices are detailed on the Erosion and Sediment Control Plan. Included within the appendix portion of this report are Construction Inspection and Operations and Maintenance Checklists. The operator is ultimately responsible for inspection and maintenance during construction. Stabilization must be achieved prior to removal of temporary erosion and sediment control practices. The SWPPP Monitoring Professional must inspect and approve final stabilization prior to filing of the NOT. Following the NOT filing, which terminates permit coverage, the Property Owner or any subsequent owner shall follow the guidelines set forth in this report and will be responsible for operations and maintenance over the lifetime of the facility. Operations and maintenance of the proposed post-stormwater management facilities is the responsibility of the Owner/Operator.

A designated representative from the above-mentioned party shall conduct bi-annual inspections and keep a log of results and mitigation measures taken. This log shall be made available to the municipality at their request. Maintenance shall depend mainly on inspection observations. Any deficiencies in the facility shall be corrected immediately upon discovery. Sediment removal shall occur as needed but at minimum twice yearly (if applicable). Cleaning of structures shall include the removal, and proper disposal, of all sand and debris from sumps. A qualified hauler, familiar in the proper disposal of waste shall dispose of sediment. Inspection forms and/or checklists in addition to maintenance procedures have been provided for use as part of this document.

Further maintenance requirements are depicted on the Operation and Maintenance Plan included within the appendix portion of this report.

SPDES GENERAL PERMIT FOR CONSTRUCTION ACTIVITIES GP-0-25-001

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL
CONSERVATION (NYSDEC)

SPDES GENERAL PERMIT
FOR STORMWATER DISCHARGES

From

CONSTRUCTION ACTIVITY

Permit No. GP-0-25-001

Construction General Permit (CGP)

Issued Pursuant to Article 17, Titles 7, 8 and Article 70

of the Environmental Conservation Law

Effective Date: January 29, 2025 Expiration Date: January 28, 2030

Scott E. Sheeley

Chief Permit Administrator

Scott E. Sheeley JAN. 29, 2025

Authorized Signature Date

Address: NYSDEC
Division of Environmental Permits
625 Broadway, 4th Floor
Albany, N.Y. 12233-1750

PREFACE

Pursuant to Section 402 of the Clean Water Act (CWA), and 40 CFR 122.26(b)(14)(x), (15)(i), and (15)(ii), *stormwater discharges* from certain *construction activities* are unlawful unless they are authorized by a National Pollutant Discharge Elimination System (NPDES) permit or by a state permit program. New York State administers the approved State Pollutant Discharge Elimination System (SPDES) program with permits issued in accordance with the New York State Environmental Conservation Law (ECL) Article 17, Titles 7 and 8, and Article 70, as well as 6 NYCRR Parts 621 and 750.

C*onstruction activities* constitute construction of a *point source* and, therefore, pursuant to ECL sections 17-0505, 17-0701, and 17-0803, the *owner or operator* must have coverage under a SPDES permit prior to *commencement of construction activities*. The *owner or operator* cannot wait until there is an actual *discharge* from the *construction site* to obtain permit coverage.

***Note: The italicized words/phrases within this permit are defined in Appendix A.**

Part I. How to Obtain Coverage and General Requirements

To be covered under this permit, the *owner or operator* must meet all eligibility requirements in Part I.A. and follow the requirements for obtaining permit coverage in Part I.D., F., or G.

A. Eligibility Requirements

For a *common plan of development or sale*, the *phase(s)* that meet the eligibility requirements in Part I.A. may obtain coverage under this permit even if other *phase(s)* of the same *common plan of development or sale* do not meet the eligibility requirements and require an individual SPDES permit.

1. The *owner's or operator's construction activities* involve soil disturbances of:

    a. one or more acres; or

    b. less than one acre which are part of a *common plan of development or sale* that will ultimately disturb one or more acres; or

    c. less than one acre where NYSDEC has determined that a SPDES permit is required for *stormwater discharges* based on the potential for contribution to a violation of a *water quality standard* or for significant contribution of pollutants to *surface waters of the State*.

        i. 5,000 square feet or more, but less than one acre, and are in the New York City Watershed located east of the Hudson River, Appendix C Figure 1; or

        ii. 20,000 square feet or more, but less than one acre, within the municipal boundaries of the City of New York (NYC); or

        iii. less than 20,000 square feet which are part of a *common plan of development or sale* that will ultimately disturb 20,000 square feet or more, but less than one acre, within the municipal boundaries of NYC; or

        iv. that creates 5,000 square feet or more of *impervious area* within the municipal boundaries of NYC.

2. *Discharges* from the *owner's or operator's construction activities* are/were not:

    a. already covered by a different SPDES permit; or

    b. covered under a different SPDES permit that was denied, terminated, or revoked; or

    c. identified in an expired individual SPDES permit that was not renewed; or

    d. required to obtain an individual SPDES permit or another general SPDES permit in accordance with Part VII.K.

3. If *construction activities* may adversely affect a species that is endangered or threatened, the *owner or operator* must obtain a:

    a. permit issued pursuant to 6 NYCRR Part 182 for the project; or

    b. letter issued by NYSDEC of non-jurisdiction pursuant to 6 NYCRR Part 182 for the project.

4. If *construction activities* have the potential to affect an *historic property*, the *owner or operator* must obtain one of the following:

    a. documentation that the *construction activity* is not within an archeological buffer area indicated on the sensitivity map, and that the *construction activity* is not located on or immediately adjacent to a property listed or determined to be eligible for listing on the National or State Registers of Historic Places, and that there is no new permanent building on the *construction site* within the following distances from a building, structure, or object that is more than 50 years old, or if there is such a new permanent building on the *construction site* within those parameters that NYS Office of Parks, Recreation and Historic Preservation (OPRHP), a Historic Preservation Commission of a Certified Local Government, or a qualified preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant:

        i. 1-5 acres of disturbance - 20 feet; or

        ii. 5-20 acres of disturbance - 50 feet; or

iii. 20+ acres of disturbance - 100 feet.

b. NYSDEC consultation form sent to OPRHP,[1] and copied to NYSDEC's Agency Historic Preservation Officer (APO), and

i. the State Environmental Quality Review Act (SEQR) Environmental Assessment Form (EAF) with a negative declaration or the Findings Statement, with documentation of OPRHP's agreement with the resolution; or

ii. documentation from OPRHP that the *construction activity* will result in No Impact; or

iii. documentation from OPRHP providing a determination of No Adverse Impact; or

iv. a Letter of Resolution signed by the *owner or operator*, OPRHP and the DEC APO which allows for this *construction activity* to be eligible for coverage under the general permit in terms of the State Historic Preservation Act (SHPA).

c. documentation of satisfactory compliance with Section 106 of the National Historic Preservation Act for a coterminous project area:

i. No Affect; or

ii. No Adverse Affect; or

iii. Executed Memorandum of Agreement.

d. documentation that SHPA Section 14.09 has been completed by NYSDEC or another state agency.

5. If *construction activities* are subject to SEQR, the *owner or operator* must obtain documentation that SEQR has been satisfied.

6. If *construction activities* are not subject to SEQR, but subject to the equivalent environmental review from another New York State or federal agency, the

[1] The consultation form can be submitted, along with other project information, through OPRHP's Cultural Resource Information System (CRIS) portal. If submitted through CRIS, paper copies of the consultation form need not be mailed.

owner or operator must obtain documentation that project review, pursuant to a process equivalent to SEQR from another New York State or federal agency, has been satisfied.

7. If *construction activities* require Uniform Procedures Act (UPA) Permits (see 6 NYCRR Part 621) from NYSDEC, or the equivalent from another New York State or federal agency, the *owner or operator* must:

    a. obtain all such necessary permits; or

    b. receive notification from NYSDEC pursuant to 6 NYCRR 621.3(a)(4) excepting Part I.A.7.a.

8. *Construction activities* are not eligible if they meet the following criteria in Part I.A.8.a. or b.:

    a. For linear transportation and linear utility project types, the *construction activities*:

        i. are within the watershed of *surface waters of the State* classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website; and

        ii. are undertaken on land with no existing *impervious cover*; and

        iii. disturb two or more acres of *steep slope*.

    b. For all other project types, the *construction activities*:

        i. are within the watershed of *surface waters of the State* classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website; and

        ii. are undertaken on land with no existing *impervious cover*; and

        iii. disturb one or more acres of *steep slope*.

B. Types of *Discharges* Authorized

1. The following *stormwater discharges* are authorized under this permit:

   a. *Stormwater discharges*, including *stormwater* runoff, snowmelt runoff, and surface runoff and drainage, associated with *construction activity*, are authorized under this permit provided that appropriate *stormwater* controls are designed, installed, and maintained in accordance with Part II. and Part III.

   b. *Stormwater discharges* from construction support activities at the *construction site* (including concrete or asphalt batch plants, equipment staging yards, material storage areas, excavated material disposal areas, and borrow areas) if the following requirements are met:

      i. The support activity is directly related to the *construction site* required to have permit coverage for *stormwater discharges*; and

      ii. The support activity is not a commercial operation, nor does it serve multiple unrelated *construction sites*; and

      iii. The support activity does not continue to operate beyond the completion of the *construction activity* at the site it supports; and

      iv. *Stormwater* controls are implemented in accordance with Part II. and Part III. for *discharges* from the support activity areas.

2. The following non-*stormwater discharges* associated with *construction activity* are authorized under this permit:

   a. Non-*stormwater discharges* listed in 6 NYCRR 750-1.2(a)(29)(vi), with the following exception: "*Discharges* from firefighting activities are authorized only when the firefighting activities are emergencies/unplanned"; and

   b. Non-*stormwater discharges* of waters to which other components have not been added that are used in accordance with the *SWPPP* to control dust or irrigate vegetation in stabilized areas; and

   c. Uncontaminated *discharges* from *dewatering* operations

3. Authorized *discharges* of *stormwater* or authorized *discharges* of non-*stormwater*, commingled with a *discharge* authorized by a different SPDES permit and/or a *discharge* that does not require SPDES permit authorization, are also authorized under this permit.

C. Prohibited *Discharges*

1. Non-*stormwater discharges* prohibited under this permit include but are not limited to:

    a. Wastewater from washout of concrete; and

    b. Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds, and other construction materials; and

    c. Fuels, oils, or other *pollutants* used in vehicle and equipment operation and maintenance; and

    d. Soaps, solvents, or detergents used in vehicle and equipment washing or external building washdown; and

    e. Toxic or hazardous substances from a spill or other release.

D. Electronic Notice of Intent (eNOI) Submittal

To receive authorization in accordance with Part I.D.3.b., the *owner or operator* must submit a complete eNOI in accordance with the requirements in Part I.D. The eNOI contains questions to: ensure eligibility requirements in Part I.A. have been met; obtain *owner or operator* contact information; obtain the total area to be disturbed and the existing/future *impervious areas* (rounded to the nearest tenth of an acre); confirm *Traditional Land Use Control MS4 Operator* jurisdiction over construction projects; satisfy the EPA eRule requirements; confirm that the Water Quality-Based Effluent Limitations in Part II. have been met; demonstrate consideration of the future risks due to climate change in accordance with Part III.A.2.; and confirm that the other *Stormwater Pollution Prevention Plan (SWPPP)* requirements in Part III. have been met.

1. An eNOI may be submitted for:

    a. *construction activities* that are not part of a *common plan of development or sale*; or

b. an entire *common plan of development or sale*; or

c. separate *phase(s)* of a *common plan of development or sale* if the following requirements are met:

    i. the *common plan of development or sale* meets the eligibility requirements of Part I.A.5. or 6.; and

    ii. the *phase(s)* meet(s) all other eligibility requirements of Part I.A.; and

    iii. Part III.C. Required *SWPPP* Components by Project Type is based on the *common plan of development or sale*, not the *phase(s)*; or

d. *tree clearing* that is associated with, or will support, a *renewable energy* generation, transmission, or storage project that meets Part I.A.5. and 6., if the *tree clearing*:

    i. meets all other eligibility requirements of Part I.A.; and

    ii. will occur in NYSDEC's Regions 3-9; and

    iii. is not within ¼ mile of a bat hibernaculum protected pursuant to 6 NYCRR Part 182; and

    iv. will occur between November 1st and March 31st.

2. As prerequisites for submitting an eNOI, the *owner or operator* must:

    a. prepare a *SWPPP* for Part I.D.1.a., b., c., or d. in accordance with Part III.; and

    b. based on the following criteria, upload the following signature forms signed in accordance with Part VII.J. to the eNOI prior to submission:

        i. for all eNOIs:

            1. the SWPPP Preparer Certification Form, Appendix F, signed by the *SWPPP* preparer; and

2. the Owner/Operator Certification Form, Appendix J, signed by the *owner or operator*; and

ii. if an eNOI includes *construction activities* within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)* that will *discharge* to the *MS4(s)*:

1. determine if the *Traditional Land Use Control MS4 Operator(s)* have review authority. A *Traditional Land Use Control MS4 Operator* does not have review authority where:

a. the *owner or operator* of the *construction activities* in Part I.D.2.b.ii. is the same entity as the *Traditional Land Use Control MS4 Operator* identified in Part I.D.2.b.ii.; or

b. there is a statute exempting the *owner or operator* from zoning review by the *Traditional Land Use Control MS4 Operator*; or

c. there is no such statute per Part I.D.2.b.ii.1.b., the *Traditional Land Use Control MS4 Operator* concludes, after public hearing, that it does not have zoning review authority in accordance with Legal Memorandum LU14 Updated January 2020 “Governmental Immunity from Zoning and Other Legislation”; and

2. if the *Traditional Land Use Control MS4 Operator(s)* have review authority, submit the *SWPPP* to the *Traditional Land Use Control MS4 Operator(s)* for review and have:

a. if outside the municipal boundaries of NYC: the MS4 SWPPP Acceptance Form, Appendix G, signed by the principal executive officer or ranking elected official from the *Traditional Land Use Control MS4 Operator,* or by a duly authorized representative of that person in accordance with Part VII.J.2.; or

b. if within the municipal boundaries of NYC: The City of New York Department of Environmental Protection (NYCDEP) SWPPP Acceptance/Approval Form, Appendix H, signed by the principal executive officer or ranking elected official from the Traditional Land Use Control MS4 Operator, or by a duly authorized representative of that person in accordance with Part VII.J.2.; and

3. if the *Traditional Land Use Control MS4 Operator* does not have review authority, have the MS4 No Jurisdiction Form, Appendix I, signed by the principal executive officer or ranking elected official from the *Traditional Land Use Control MS4 Operator,* or by a duly authorized representative of that person in accordance with Part VII.J.2.

3. Submitting an eNOI:

a. The *owner or operator* must submit a complete Notice of Intent electronically using a NYSDEC approved form.[2]

b. The *owner or operator* is authorized to *commence construction activity* as of the authorization date indicated in the Letter of Authorization (LOA), which is sent by NYSDEC after a complete eNOI is submitted.

i. If an eNOI is received for a *SWPPP* that deviates from one of the technical standards but demonstrates *equivalence* in accordance with Part III.B.1.a.ii. or Part III.B.2.b.ii., if the *SWPPP* includes *construction activities* that are not within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)*, and/or if the *SWPPP* includes *construction activities* within the municipal boundary(ies) of *Traditional Land Use Control MS4 Operator(s)* that do not have review authority in accordance with Part I.D.2.b.ii.1., the authorization date indicated in the LOA will be 60 business days after the eNOI submission date.

[2] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

c. If *Traditional Land Use Control MS4 Operator(s)* have review authority in accordance with Part I.D.2.b.ii.2., the *owner or operator* must, within five business days of receipt of the LOA, send an electronic copy of the LOA to the *Traditional Land Use Control MS4 Operator(s)* with review authority.

E. General Requirements for *Owners or Operators* with Permit Coverage

1. As of the date the LOA is received, the *owner or operator* must make the eNOI, *SWPPP*, and LOA available for review and copying in accordance with the requirements in Part VII.H. When applicable, as of the date an updated LOA is received, the *owner or operator* must make the updated LOA available for review and copying in accordance with the requirements in Part VII.H.

2. The *owner or operator* must ensure compliance with all requirements of this permit and that the provisions of the *SWPPP*, including any changes made to the *SWPPP* in accordance with Part III.A.5., are properly implemented and maintained from the *commencement of construction activity* until:

   a. all areas of disturbance have achieved *final stabilization;* and

   b. the owner's or operator's coverage under this permit is terminated in accordance with Part V.A.5.a.

3. As of the date of the *commencement of construction activities* until Part I.E.2.a. and b. have been met, the *owner or operator* must maintain at the *construction site*, a copy of:

   a. all documentation necessary to demonstrate eligibility with this permit; and

   b. this permit; and

   c. the *SWPPP*; and

   d. the signed SWPPP Preparer Certification Form; and

   e. the signed MS4 SWPPP Acceptance Form or signed NYCDEP SWPPP Acceptance/Approval Form or signed MS4 No Jurisdiction Form (when applicable); and

   f. the signed Owner/Operator Certification Form; and

g. the eNOI; and

h. the LOA; and

i. the LOA transmittal to the Traditional Land Use Control MS4 Operator in accordance with Part I.D.3.c. (when applicable).

4. The *owner or operator* must maintain at the *construction site*, until Part I.E.2.a. and b. have been met, as of the date the documents become final or are received, a copy of the:

   a. responsible contractor's or subcontractor's certification statement(s) in accordance with Part III.A.7.; and

   b. inspection reports in accordance with Part IV.C.4. and 6.; and

   c. Request to Disturb Greater Than Five Acres and the Authorization Letter to Disturb Greater Than Five Acres in accordance with Part I.E.6. (when applicable); and

   d. Request to Continue Coverage and the Letter of Continued Coverage (LOCC) in accordance with Part I.F.2. and 4. (when applicable); and

   e. The updated LOA(s) in accordance with Part I.E.9. (when applicable).

5. The *owner or operator* must maintain the documents in Part I.E.3. and 4. in a secure location, such as a job trailer, on-site construction office, or mailbox with lock. The secure location must be accessible during normal business hours to an individual performing a compliance inspection. The documents must be paper documents unless electronic documents are accessible to the inspector during an inspection to the same extent as a paper copy stored at the site would be. If electronic documents are kept on site, the *owner or operator* must maintain functional equipment on site available to an inspector during normal hours of operation such that an inspector may view the electronic documents in a format that can be read in a similar manner as a paper record and in a legally dependable format with no less evidentiary value than their paper equivalent.

6. The *owner or operator* must meet the following requirements prior to disturbing greater than five acres of soil at any one time:

   a. The *owner or operator* must submit a written Request to Disturb Greater Than Five Acres to:

i. NYSDEC's Regional Office Division of Water staff based on the project location, Appendix E, if a *Traditional Land Use Control MS4 Operator* does not have review authority in accordance with Part I.D.2.b.ii.1.; or

ii. the *Traditional Land Use Control MS4 Operator*, if a *Traditional Land Use Control MS4 Operator* has review authority in accordance with Part I.D.2.b.ii.1.; or

iii. NYSDEC's Regional Office Division of Water staff based on the project location, Appendix E, and each involved *Traditional Land Use Control MS4 Operator*, if the project spans multiple municipalities with more than one *Traditional Land Use Control MS4 Operator* involved with review authority in accordance with Part I.D.2.b.ii.1.

b. The written Request to Disturb Greater Than Five Acres must include:

i. The SPDES permit identification number (Permit ID); and

ii. Full technical justification demonstrating why alternative methods of construction that would result in five acres of soil disturbance or less at any one time are not feasible; and

iii. The phasing plan for the project and sequencing plans for all *phases* from the *SWPPP* in accordance with Part III.B.1.d.; and

iv. Plans with locations and details of erosion and sediment control practices such that the heightened concern for erosion when disturbing greater than five acres at one time has been addressed; and

v. Acknowledgment that "the *owner or operator* will comply with the requirements in Part IV.C.2.b."; and

vi. Acknowledgment that "the *owner or operator* will comply with the requirements in Part II.B.1.b."

c. The *owner or operator* must be in receipt of an Authorization Letter to Disturb Greater Than Five Acres, which will include when the

authorization begins and ends and indicate a maximum area (acres) of soil disturbance allowed at any one time, from:

i. NYSDEC, if Part I.E.6.a.i. or iii. apply; or

ii. the *Traditional Land Use Control MS4 Operator*, if Part I.E.6.a.ii. applies.

7. Upon a finding of significant non-compliance with the practices described in the *SWPPP* or violation of this permit, NYSDEC may order an immediate stop to all *construction activity* at the site until the non-compliance is remedied. The stop work order must be in writing, describe the non-compliance in detail, and be sent to the *owner or operator*.

8. If any human remains or archaeological remains are encountered during excavation, the *owner or operator* must immediately cease, or cause to cease, all *construction activity* in the area of the remains and notify the appropriate Regional Water Engineer (RWE).[3] *Construction activity* shall not resume until written permission to do so has been received from the RWE.

9. To be authorized to implement modifications to the information previously submitted in the eNOI, the *owner or operator* must:

   a. notify NYSDEC via email at Stormwater_info@dec.ny.gov requesting access to update the eNOI; and

   b. update the eNOI to reflect the modifications and resubmit the eNOI in accordance with Part I.D.; and

   c. receive an updated LOA.

10. The eNOI, *SWPPP*, LOA, updated LOAs (when applicable), and inspection reports required by this permit are public documents that the *owner or operator* must make available for review and copying by any person within five business days of the *owner or operator* receiving a written request by any such person to review these documents. Copying of documents will be done at the requester's expense.

[3] The Regional Water Manager where a DEC Region does not have a RWE.

F. Permit Coverage for *Discharges* Authorized Under GP-0-20-001

When applicable:

1. Upon the effective date of this permit, an *owner or operator* of *a construction activity*, with coverage under GP-0-20-001, will have interim coverage under GP-0-25-001 for 45 calendar days starting on the effective date of GP-0-25-001 so long as the *owner or operator* maintains compliance with all applicable requirements of this permit.

2. Within 30 calendar days of the effective date of this permit, the *owner or operator*, with coverage under GP-0-20-001, must submit a complete Request to Continue Coverage electronically using a NYSDEC approved form,[4] which contains the information identified in Part I.F.3. below, if:

   a. the *owner or operator* continues to implement the SMP component in conformance with the technical standards in place at the time of initial project authorization; and

   b. the *owner or operator* will comply with all non-design requirements of GP-0-25-001.

3. The Request to Continue Coverage form contains questions to: ensure eligibility requirements in Part I.A. have been met; verify *owner or operator* contact information; verify the permit identification number; verify the original eNOI submission ID, if applicable; verify Part I.F.2.a. and b.; verify the version of the Design Manual that the technical/design components conform to; and receive an updated Owner/Operator Certification Form, Appendix I.

4. The *owner or operator* has obtained continued coverage under GP-0-25-001 as of the date indicated in the LOCC, which is sent by NYSDEC after a complete Request to Continue Coverage form is submitted.

5. If the owner or operator does not submit the Request to Continue Coverage form in accordance with Part I.F.2. and 3., coverage under this permit is automatically terminated after interim coverage expires.

[4] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

G. Change of *Owner or Operator*

When applicable:

1. When property ownership changes, or when there is a change in operational control over the construction plans and specifications, the following process applies:

    a. The new *owner or operator* must meet the applicable prerequisites for submitting an eNOI in accordance with Part I.D.2.; and

    b. The new *owner or operator* must submit an eNOI in accordance with Part I.D.3.; and

    c. Permit coverage for the new *owner or operator* will be effective upon receipt of the LOA in accordance with Part I.D.3.b.; and

    d. The new *owner or operator*, upon receipt of their LOA, must provide their Permit ID to the original *owner or operator*; and

    e. If the original *owner or operator* will no longer be the *owner or operator* of the *construction activity* identified in the original *owner's or operator's* eNOI, the original *owner or operator*, upon receipt of the new *owner's or operator's* Permit ID in accordance with Part I.G.1.d., must submit to NYSDEC a completed eNOT in accordance with Part V. that includes the name and Permit ID of the new *owner or operator*; or

    f. If the original *owner or operator* maintains ownership of a portion of the *construction activity*, the original *owner or operator* must maintain their coverage under the permit by modifying their eNOI; modifications to the eNOI must include:

        i. the revised area of disturbance and/or *impervious area(s)*; and

        ii. the revised SMP information, if applicable; and

        iii. a narrative description of what has changed; and

        iv. the new *owner's or operator's* Permit ID for the portion of the project removed from the eNOI.

    Owners or operators must follow Part I.E.9. to modify the eNOI.

Part II. Water Quality-Based Effluent Limitations

A. Maintaining Water Quality

NYSDEC expects that compliance with the requirements of this permit will control *discharge*s necessary to meet applicable *water quality standards*. It shall be a violation of the *ECL* for any *discharge* to either cause or contribute to a violation of the following *water quality standards* as contained in Parts 700 through 705 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York:

1. There must be no increase in turbidity that will cause a substantial visible contrast to natural conditions; and

2. There must be no increase in suspended, colloidal or settleable solids that will cause deposition or impair the waters for their best usages; and

3. There must be no residue from oil and floating substances, nor visible oil film, nor globules of grease.

If there is evidence indicating that the *stormwater discharge*s authorized by this permit are causing, have the reasonable potential to cause, or are contributing to a violation of the *water quality standard,* the *owner or operator* must take appropriate corrective action in accordance with Part IV.C.5. of this permit and document in accordance with Part IV.C.4. of this permit. To address the *water quality standard* violation the *owner or operator* must include and implement appropriate controls in the *SWPPP* to correct the problem or obtain an individual SPDES permit.

If, despite compliance with the requirements of this permit, it is demonstrated that the *stormwater discharge*s authorized by this permit are causing or contributing to a violation of *water quality standards*, or if NYSDEC determines that a modification of this permit is necessary to prevent a violation of *water quality standards*, the authorized *discharge*s will no longer be eligible for coverage under this permit, and the *owner or operator* must obtain an individual SPDES permit prior to further *discharges* from the *construction site*.

B. Effluent Limitations Applicable to *Discharges* from *Construction Activities*

*Discharge*s authorized by this permit must achieve, at a minimum, the effluent limitations in Part II.B.1.a., b., c., d., and e. These limitations represent the

degree of effluent reduction attainable by the application of best practicable technology currently available.

1. Erosion and Sediment Control Requirements - The *owner or operator* must select, design, install, implement, and maintain control measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. The selection, design, installation, implementation, and maintenance of these control measures must meet the non-numeric effluent limitations in Part II.B.1.a., b., c., d., and e. and be in accordance with the New York State Standards and Specifications for Erosion and Sediment Control (BB), dated November 2016, using sound engineering judgment. Where control measures are not designed in conformance with the design criteria included in the technical standard, the *owner or operator* must include in *SWPPP* the reason(s) for the deviation, or alternative design, and provide information in the *SWPPP* demonstrating that the deviation or alternative design is *equivalent* to the technical standard.

    a. **Erosion and Sediment Controls.** At a minimum, erosion and sediment controls must be selected, designed, installed, implemented, and maintained to:

        i. *Minimize* soil erosion through application of runoff control and soil stabilization control measure to *minimize pollutant discharge*s; and

        ii. Control *stormwater discharge*s, including both peak flow rates and total *stormwater* volume, to *minimize* channel and *streambank* erosion and scour in the immediate vicinity of the *discharge* points; and

        iii. *Minimize* the amount of soil exposed during *construction activity*; and

        iv. *Minimize* the disturbance of *steep slope*; and

        v. *Minimize* sediment *discharge*s from the site; and

        vi. Provide and maintain *natural buffers* around surface waters, direct *stormwater* to vegetated areas and maximize *stormwater* infiltration to reduce *pollutant discharge*s, unless *infeasible*; and

        vii. *Minimize* soil compaction. *Minimizing* soil compaction is not required

where the intended function of a specific area of the site dictates that it be compacted; and

viii. Unless *infeasible*, preserve a sufficient amount of topsoil to complete soil restoration and establish a uniform, dense vegetative cover; and

ix. *Minimize* dust. On areas of exposed soil, *minimize* dust through the appropriate application of water or other dust suppression techniques to control the generation of *pollutants* that could be discharged from the site.

b. **Soil Stabilization**. In areas where soil disturbance activity has ceased, whether permanently or *temporarily ceased*, the application of soil stabilization measures must be initiated by the end of the next business day and completed within 14 calendar days from the date the current soil disturbance activity ceased. For *construction sites* that *directly discharge* to one of the 303(d) segments listed in Appendix D, or are located in one of the watersheds listed in Appendix C, or are authorized to disturb greater than five acres in accordance with Part I.E.5.a.viii., the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven calendar days from the date the soil disturbance activity ceased.

c. **Dewatering**. *Discharge*s from *dewatering* activities, including *discharge*s from *dewatering* of trenches and excavations, must be managed by appropriate control measures.

d. **Pollution Prevention Measures**. Select, design, install, implement, and maintain effective pollution prevention measures to *minimize* the *discharge* of *pollutants* and prevent a violation of the *water quality standards*. At a minimum, such measures must be selected, designed, installed, implemented, and maintained to:

i. *Minimize* the *discharge* of *pollutants* from equipment and vehicle washing, wheel wash water, and other wash waters. Soaps, detergents and solvents cannot be used; and

ii. *Minimize* the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, hazardous and toxic waste, and other materials present on the site to precipitation

and to *stormwater*. *Minimization* of exposure is not required in cases where the exposure to precipitation and to *stormwater* will not result in a *discharge* of *pollutants*, or where exposure of a specific material or product poses little risk of *stormwater* contamination (such as final products and materials intended for outdoor use); and

iii. Prevent the *discharge* of *pollutants* from spills and leaks and implement chemical spill and leak prevention and response procedures.

e. **Surface Outlets.** When discharging from basins and impoundments, the surface outlets must be designed, constructed, and maintained in such a manner that sediment does not leave the basin or impoundment and that erosion at or below the outlet does not occur.

C. Post-Construction Stormwater Management Practice (SMP) Requirements

1. The *owner or operator* of a *construction activity* that requires post-construction SMPs, in accordance with Part III.C., must select, design, install, implement, and maintain the SMPs to meet the *performance criteria* in the New York State Stormwater Management Design Manual, dated July 31, 2024 (DM), using sound engineering judgment. Where SMPs are not designed in conformance with the *performance criteria* in the DM, the *owner or operator* must include in the *SWPPP* the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. The *owner or operator* of a *construction activity*, that requires SMPs in accordance with Part III.C., must design the practices to meet the applicable *sizing criteria* in Part II.C.2.a., b., c., or d.

a. Sizing Criteria for *New Development*

i. Runoff Reduction Volume (RRv) and Water Quality Volume (WQv):

1. Reduce the total WQv by application of RR techniques and standard SMPs with RRv capacity. The total WQv must be calculated in accordance with the criteria in Section 4.2 of the DM; or

2. Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the requirements in Part II.C.2.a.i.1. due to *site limitations* must direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv must be documented in the *SWPPP*. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the *SWPPP* must include documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible*.

   In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 4.4 of the DM. The remaining portion of the total WQv that cannot be reduced must be treated by application of standard SMPs.

ii. Channel Protection Volume (CPv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event, remaining after runoff reduction. Where a CPv control orifice is provided, the minimum orifice size must be 3 inches, with acceptable external trash rack or orifice protection. The CPv requirement does not apply when:

   1. Reduction of the entire CPv is achieved by application of runoff reduction techniques or infiltration systems; or

   2. The 1-year post-development peak *discharge* is less than or equal to 2.0 cfs without detention or velocity controls; or

   3. The site *directly discharges* into a fifth order or larger water body (stream, river, or lake), or tidal waters, where the increase in smaller flows will not impact the stream bank or channel integrity. However, the point of *discharge* must be adequately protected against scour and erosion by the increased peak *discharge*.

iii. *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams, or

2. A downstream analysis reveals that *overbank* control is not required.

iv. Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams, or

2. A downstream analysis reveals that *overbank* control is not required.

b. *Sizing Criteria* for *New Development* in Enhanced Phosphorus Removal Watersheds

i. Runoff Reduction Volume (RRv) and Water Quality Volume (WQv):

1. Reduce the WQv by application of RR techniques and standard SMPs with RRv capacity. The total WQv is the runoff volume from the 1-year, 24-hour design storm over the post-developed watershed and must be calculated in accordance with the criteria in Section 4.3 of the DM; or

2. Minimum RRv and Treatment of Remaining Total WQv: *Construction activities* that cannot meet the criteria in Part II.C.2.b.i.1. due to *site limitations* must direct runoff from all newly constructed *impervious areas* to a RR technique or standard SMP with RRv capacity unless *infeasible*. The specific *site limitations* that prevent the reduction of 100% of the WQv must be documented in the *SWPPP*. For each *impervious area* that is not directed to a RR technique or standard SMP with RRv capacity, the *SWPPP* must include

documentation which demonstrates that all options were considered and for each option explains why it is considered *infeasible.*

In no case shall the runoff reduction achieved from the newly constructed *impervious areas* be less than the Minimum RRv as calculated using the criteria in Section 4.5 of the DM. The remaining portion of the total WQv that cannot be reduced must be treated by application of standard SMPs.

ii. Channel Protection Volume (CPv): Provide 24 hour extended detention of the post-developed 1-year, 24-hour storm event, remaining after runoff reduction. Where a CPv control orifice is provided, the minimum orifice size must be 3 inches, with acceptable external trash rack or orifice protection. The CPv requirement does not apply when:

1. Reduction of the entire CPv is achieved by application of runoff reduction techniques or infiltration systems; or

2. The 1-year post-development peak *discharge* is less than or equal to 2.0 cfs; or

3. The site *directly discharges* to tidal waters, or a fifth order or larger water body (stream, river, or lake) where the increase in smaller flows will not impact the stream bank or channel integrity. However, the point of *discharge* must be adequately protected against scour and erosion by the increased peak *discharge*.

iii. *Overbank* Flood Control Criteria (Qp): Requires storage to attenuate the post-development 10-year, 24-hour peak *discharge* rate (Qp) to predevelopment rates. The Qp requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams; or

2. A downstream analysis reveals that *overbank* control is not required.

iv. Extreme Flood Control Criteria (Qf): Requires storage to attenuate the post-development 100-year, 24-hour peak *discharge* rate (Qf) to predevelopment rates. The Qf requirement does not apply when:

1. the site *directly discharges* to tidal waters or fifth order or larger streams; or

2. A downstream analysis reveals that *overbank* control is not required.

c. *Sizing Criteria* for *Redevelopment Activity*

i. Water Quality Volume (WQv): The WQv treatment objective for *redevelopment activity* must be addressed by one of the following options, as outlined in Section 9.2.1. *Redevelopment activities* located in an Enhanced Phosphorus Removal Watershed (see Part III.B.3. and Appendix C) must calculate the WQv in accordance with Section 4.3 of the DM. All other *redevelopment activities* must calculate the WQv in accordance with Section 4.2 of the DM.

1. Reduce the existing *impervious cover* by a minimum of 25% of the total disturbed, *impervious area*. The Soil Restoration criteria in Section 5.1.6 of the DM must be applied to all newly created pervious areas; or

2. Capture and treat 100% of the required WQv, for a minimum of 25% of the disturbed redevelopment *impervious area*, by implementation of standard SMPs or reduced by application of runoff reduction techniques; or

3. Capture and treat 100% of the required WQv, for a minimum of 75% of the disturbed redevelopment *impervious area*, by implementation of a volume-based alternative SMP, as defined in Section 9.4 of the DM; or

4. Capture and treat 100% of the required WQv, for a minimum of 75% of the disturbed redevelopment *impervious area*, by implementation of a flow-through alternative SMP sized to treat the peak rate of runoff from the WQv design storm; or

5. Application of a combination of 1 through 4 above that provide a weighted average of at least two of the above methods. Application of this method must be in accordance with the criteria in Section 9.2.1(A)(V) of the DM; or

6. If there is an existing SMP located on the site that captures and treats runoff from the *impervious area* that is being disturbed, the WQv treatment option selected must, at a minimum, provide treatment equal to the treatment that was being provided by the existing practice(s) if that treatment is greater than the treatment required by options 1 through 5 above.

ii. Channel Protection Volume (CPv) is not required if there is 0% change to hydrology that increases the *discharge* rate and volume from the project site.

iii. *Overbank* Flood Control (Qp) is not required if there is 0% change to hydrology that increases the *discharge* rate from the project site.

iv. Extreme Flood Control (Qf) is not required if there is 0% change to hydrology that increases the *discharge* rate from the project site.

d. *Sizing Criteria* for Combination of *Redevelopment Activity* and *New Development*

Construction projects, that include both *new development* and *redevelopment activity*, must use SMPs that meet the *sizing criteria* calculated as an aggregate of the *sizing criteria* in Part II.C.2.a. or b. for the *new development* portion of the project and Part II.C.2.c. for the *redevelopment activity* portion of the project.

Part III. Stormwater Pollution Prevention Plan (SWPPP)

A. General *SWPPP* Requirements

1. A *SWPPP* must be prepared and implemented by the *owner or operator* of all *construction activity* covered by this permit. All authorized *discharges* must be identified in the *SWPPP*. The *SWPPP* must document the selection, design, installation, implementation and maintenance of the control measures and

practices that will be used to meet the effluent limitations in Part II.B. and, where applicable, the SMP requirements in Part II.C.

2. The *SWPPP* must demonstrate consideration in narrative format of the future physical risks due to climate change pursuant to the Community Risk and Resiliency Act (CRRA), 6 NYCRR Part 490, and associated guidance.

    a. The owner or operator must consider:

        i. the following physical risks due to climate change:

            (i) increasing temperature; and

            (ii) increasing precipitation; and

            (iii) increasing variability in precipitation, including chance of drought; and

            (iv) increasing frequency and severity of flooding; and

            (v) rising sea level; and

            (vi) increasing storm surge; and

            (vii) shifting ecology.

        ii. for each of the following:

            (i) overall site planning; and

            (ii) location, elevation, and sizing of:

                a. control measures and practices; and

                b. conveyance system(s); and

                c. detention system(s).

3. The *SWPPP* must describe the erosion and sediment control practices and where required, SMPs that will be used and/or constructed to reduce the *pollutants* in *stormwater discharges* and to assure compliance with the

requirements of this permit. In addition, the *SWPPP* must identify potential sources of pollution which may reasonably be expected to affect the quality of *stormwater discharges*.

4. All *SWPPPs*, that require the SMP component in accordance with Part III.B.2., must be prepared by a *qualified professional*.

5. The *owner or operator* must keep the *SWPPP* current so that, at all times, it accurately documents the erosion and sediment control practices that are being used or will be used during construction, and all SMPs that will be constructed on the site. At a minimum, the *owner or operator* must modify the *SWPPP*, including construction drawings:

   a. whenever the current provisions prove to be ineffective in *minimizing pollutants* in *stormwater discharges* from the site; and

   b. whenever there is a change in design, construction, or operation at the *construction site* that has or could have an effect on the *discharge* of *pollutants*; and

   c. to address issues or deficiencies identified during an inspection by the *qualified inspector,* NYSDEC, or other regulatory authority; and

   d. to document the final construction conditions in an as-built drawing.

6. NYSDEC may notify the *owner or operator* at any time that the *SWPPP* does not meet one or more of the minimum requirements of this permit. The notification must be in writing and identify the provisions of the *SWPPP* that require modification. Within fourteen (14) calendar days of such notification, or as otherwise indicated by NYSDEC, the *owner or operator* must make the required changes to the *SWPPP* and submit written notification to NYSDEC that the changes have been made. If the *owner or operator* does not respond to NYSDEC's comments in the specified time frame, NYSDEC may suspend the *owner's or operator's* coverage under this permit or require the *owner or operator* to obtain coverage under an individual SPDES permit in accordance with Part II.D.4.

7. Prior to the *commencement of construction activity*, the *owner or operator* must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting, and maintaining the erosion and sediment control practices included in the *SWPPP* and the

contractor(s) and subcontractor(s) that will be responsible for constructing the SMPs included in the *SWPPP*. The *owner or operator* must have each of the contractors and subcontractors identify at least one person from their company to be *trained contractor* that will be responsible for implementation of the *SWPPP*. The *owner or operator* must ensure that at least one *trained contractor* is on site daily when soil disturbance activities are being performed.

The *owner or operator* must have each of the contractors and subcontractors identified above sign a copy of the following certification statement below before the *commencement of construction activities*:

> "I hereby certify under penalty of law that I understand and agree to comply with the requirements of the *SWPPP* and agree to implement any corrective actions identified by the *qualified inspector* during a site inspection. I also understand that the *owner or operator* must comply with the requirements of the most current version of the New York State Pollutant Discharge Elimination System (SPDES) Construction General Permit (CGP) for Stormwater Discharges from Construction Activities and that it is unlawful for any person to cause or contribute to a violation of *water quality standards*. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

In addition to providing the certification statement above, the certification page must also identify the specific elements of the *SWPPP* that each contractor and subcontractor will be responsible for and include the name and title of the person providing the signature; the name and title of the *trained contractor* responsible for *SWPPP* implementation; the name, address and telephone number of the contracting firm; the address (or other identifying description) of the site; and the date the certification statement is signed. The *owner or operator* must attach the certification statement(s) to the copy of the *SWPPP* that is maintained at the *construction site*. If new or additional contractors are hired to implement measures identified in the *SWPPP* after the *commencement of construction activities*, they must also sign the certification statement and provide the information listed above prior to performing *construction activities*.

B. Required *SWPPP* Contents

1. Erosion and sediment control component - The *owner or operator* must prepare a *SWPPP* that includes erosion and sediment control practices.

    a. Erosion and sediment control practices must be designed:

        i. in conformance with the BB; or

        ii. *equivalent* to the BB if deviating from Part III.B.1.a.i.

    b. If the erosion and sediment control practices are designed in conformance with Part III.B.1.a.ii., the *SWPPP* must include a demonstration of *equivalence* to the BB.

    c. At a minimum, the erosion and sediment control component of the *SWPPP* must include the following:

        i. Background information about the scope of the project, including the location, type and size of project; and

        ii. A site map/construction drawing(s) with north arrows for the project, including a general location map. At a minimum, the site map must show the total site area; all improvements; areas of disturbance; areas that will not be disturbed; existing vegetation; on-site and adjacent off-site surface water(s); floodplain/floodway boundaries; wetlands and drainage patterns that could be affected by the *construction activity*; existing and final contours; locations of different soil types with boundaries; material, waste, borrow or equipment storage areas located on adjacent properties; and location(s) of the *stormwater discharge*(s) and receiving surface water(s); and

        iii. A description of the soil(s) present at the site, including an identification of the Hydrologic Soil Group (HSG); and

        iv. A phasing plan for the project and sequencing plans for all *phases*, both of which must address clearing and grubbing, excavation and grading, utility and infrastructure installation, *final stabilization*,

and any other *construction activity* at the site that will result in soil disturbance.

1. The phasing plan must include:

    a. a map delineating and labeling the limits of soil disturbance for all *phases* of a project; and

    b. a table identifying the order and intended schedule of when each *phase* will begin and end its sequencing plan. The table must identify the total disturbed area for each *phase* at any one time and the total disturbed area for the overall project at any one time all on one timeline showing all overlapping quantities of disturbed area at any one time; and

2. A sequencing plan for a specific *phase* must include:

    a. a table indicating the order and intended schedule of *construction activities* within a *phase*, and corresponding construction drawings with a description of the work to be performed; and

    b. all permanent and *temporary stabilization* measures; and

v. A description of the minimum erosion and sediment control practices to be installed or implemented for each *construction activity* that will result in soil disturbance. Include a schedule that identifies the timing of initial placement or implementation of each erosion and sediment control practice and the minimum time frames that each practice should remain in place or be implemented; and

vi. A site map/construction drawing(s) showing the specific location(s), size(s), and length(s) of each erosion and sediment control practice; and

vii. The dimensions, material specifications, installation details, and operation and maintenance requirements for all erosion and sediment control practices. Include the location and sizing of any

temporary sediment basins and structural practices that will be used to divert flows from exposed soils; and

viii. A maintenance inspection schedule for the contractor(s) and subcontractor(s) identified in Part III.A.7. to ensure continuous and effective operation of the erosion and sediment control practices. The maintenance inspection schedule must be in accordance with the requirements in the BB technical standard; and

ix. A description of the pollution prevention measures that will be used to control litter, construction chemicals and construction debris from becoming a *pollutant* source in the *stormwater discharges*; and

x. A description and location of any *stormwater discharges* associated with industrial activity other than construction at the site, including, but not limited to, *stormwater discharges* from asphalt plants and concrete plants located on the *construction site*; and

xi. Identification of any elements of the design that are not in conformance with the design criteria in the BB technical standard. Include the reason for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the technical standard.

2. SMP component – The *owner or operator* of *construction activity* identified in Table 2 of Appendix B must prepare a *SWPPP* that includes SMPs.

   a. SMPs must be designed in conformance with the applicable *sizing criteria* in Part II.C.2.a., c., or d.; and

   b. SMPs must be designed in conformance with the *performance criteria*:

      i. in the DM; or

      ii. *equivalent* to the DM if deviating from Part III.B.2.b.i.; or

      iii. in the New York State Stormwater Management Design Manual, dated January 2015 (2015 Design Manual), or *equivalent* to it, if the following criteria are met:

1. The eNOI is submitted in accordance with Part I.D. before January 29, 2027 for *construction activities* that are either:

    a. subject to governmental review and approval:

        i. where the *owner or operator* made any application to that governmental entity prior to the effective date of this permit; and

        ii. such application included a *SWPPP* developed using the 2015 Design Manual or *equivalent* to it; or

    b. not subject to governmental review and approval:

        i. where a fiscal allocation for the *construction activities* has been developed and approved by a governmental entity; and

        ii. the *SWPPP* was developed using the 2015 Design Manual or *equivalent* to it; and

c. If SMPs are designed in conformance with Part III.B.2.b.ii., the *SWPPP* must include the reason(s) for the deviation or alternative design and a demonstration of *equivalence* to the DM; and

d. If SMPs are designed in conformance with Part III.B.2.b.iii., the *SWPPP* must include supporting information or documentation demonstrating that Part III.B.2.b.iii.1.a. or b. apply; and

e. The SMP component of the *SWPPP* must include the following:

    i. Identification of all SMPs to be constructed as part of the project, including which option the SMP designs conform to, either Part III.B.2.b.i., ii., or iii. Include the dimensions, material specifications and installation details for each SMP; and

    ii. A site map/construction drawing(s) showing the specific location and size of each SMP; and

iii. A Stormwater Modeling and Analysis Report that includes:

(i) Map(s) showing pre-development conditions, including watershed/subcatchments boundaries, flow paths/routing, and design points; and

(ii) Map(s) showing post-development conditions, including watershed/subcatchments boundaries, flow paths/routing, design points and SMPs; and

(iii) Results of *stormwater* modeling (i.e. hydrology and hydraulic analysis) for the required storm events. Include supporting calculations (model runs), methodology, and a summary table that compares pre- and post-development runoff rates and volumes for the different storm events; and

(iv) Summary table, with supporting calculations, which demonstrates that each SMP has been designed in conformance with the *sizing criteria* included in the DM; and

(v) Identification of any *sizing criteria* that is not required based on the requirements included in Part II.C.; and

(vi) Identification of any elements of the design that are not in conformance with the *performance criteria* in the DM. Include the reason(s) for the deviation or alternative design and provide information which demonstrates that the deviation or alternative design is *equivalent* to the DM.

iv. Soil testing results and locations (test pits, borings); and

v. Infiltration test results, when required in accordance with Part III.B.2.a.; and

vi. An operations and maintenance plan that includes inspection and maintenance schedules and actions to ensure continuous and effective operation of each SMP. The plan must identify the entity

that will be responsible for the long-term operation and maintenance of each practice; and

3. Enhanced Phosphorus Removal Standards - The *owner or operator* of *construction activity* identified in Table 2 of Appendix B that is located in a watershed identified in Appendix C must prepare a *SWPPP* that includes SMPs designed in conformance with the applicable *sizing criteria* in Part II.C.2.b., c., or d. and the *performance criteria* Enhanced Phosphorus Removal Standards included in the DM. At a minimum, the SMP component of the *SWPPP* must meet the requirements of Part III.B.2.

C. Required *SWPPP* Components by Project Type

Owners or operators of *construction activities*, identified in Table 1 of Appendix B, are required to prepare a *SWPPP* that only includes erosion and sediment control practices designed in accordance with Part III.B.1. *Owners or operators* of the *construction activities*, identified in Table 2 of Appendix B, must prepare a *SWPPP* that also includes SMPs designed in accordance with Part III.B.2 or 3.

For the entire area of disturbance, including the entire *common plan of development or sale* if applicable, the owner or operator must evaluate every bullet from Appendix B Table 1 and Table 2 separately. If bullets from both Table 1 and Table 2 apply, the *SWPPP* must include erosion and sediment control practices for all *construction activities* but SMPs for only those portions of the *construction activities* that fall under Table 2 bullet(s).

Part IV. Inspection and Maintenance Requirements

A. General Construction Site Inspection and Maintenance Requirements

1. The *owner or operator* must ensure that all erosion and sediment control practices (including pollution prevention measures), and all SMPs identified in the *SWPPP*, are inspected and maintained in accordance with Part IV.B. and C.

B. Contractor Maintenance Inspection Requirements

1. The *owner or operator* of each *construction activity*, identified in Tables 1 and 2 of Appendix B, must have a *trained contractor* inspect the erosion and sediment control practices and pollution prevention measures being

implemented within the active work area daily to ensure that they are being maintained in effective operating condition at all times. If deficiencies are identified, the contractor must:

a. if the corrective action does not require engineering design:

    i. begin implementing corrective actions within one business day; and

    ii. complete the corrective actions within five business days; or

b. if the corrective action requires engineering design:

    i. begin the engineering design process within five business days; and

    ii. complete the corrective action in a reasonable time frame but no later than within 60 calendar days.

2. For *construction sites* where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *trained contractor* can stop conducting the maintenance inspections in accordance with Part IV.B.1. The *trained contractor* must begin conducting the maintenance inspections in accordance with Part IV.B.1. as soon as soil disturbance activities resume.

3. For *construction sites* where soil disturbance activities have been shut down with partial project completion, the *trained contractor* can stop conducting the maintenance inspections in accordance with Part IV.B.1. if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational.

C. *Qualified Inspector* Inspection Requirements

1. With the exception of the following *construction activities* identified in Tables 1 and 2 of Appendix B, a *qualified inspector* must conduct site inspections for all other *construction activities* identified in Tables 1 and 2 of Appendix B:

    a. the construction of a single-family residential subdivision with 25% or less *impervious cover* at total site build-out that involves a soil disturbance of one (1) or more acres of land but less than or equal to five (5) acres and is

not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D; and

b. the construction of a single-family home that involves soil disturbances of one (1) or more acres but less than or equal to five (5) acres and is not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D; and

c. construction on *agricultural property* that involves soil disturbances of one (1) or more acres but less than five (5) acres; and

d. *construction activities* located in the New York City Watershed located east of the Hudson River, see Appendix C Figure 1, that involve soil disturbances of 5,000 square feet or more, but less than one acre.

2. The *qualified inspector* must conduct site inspections in accordance with the following timetable:

a. For *construction sites* where soil disturbance activities are on-going, the *qualified inspector* must conduct a site inspection at least once every seven (7) calendar days; or

b. For *construction sites* where soil disturbance activities are on-going and the *owner or operator* has received authorization in accordance with Part I.E.6. to disturb greater than five (5) acres of soil at any one time, the *qualified inspector* must conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections must be separated by a minimum of two (2) full calendar days; or

c. For *construction sites* where soil disturbance activities have been temporarily suspended (e.g. winter shutdown) and *temporary stabilization* measures have been applied to all disturbed areas, the *qualified inspector* must conduct a site inspection at least once every thirty (30) calendar days. The *owner or operator* must notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix E) or, in areas under the jurisdiction of a *Traditional Land Use Control MS4 Operator,* the *Traditional Land Use Control MS4 Operator* (provided the *Traditional Land Use Control MS4 Operator* is not the *owner or operator* of the *construction activity*) by hard copy or email prior to reducing the inspections to this frequency and again by hard copy or email prior to re-commencing construction; or

d. For *construction sites* where soil disturbance activities have been shut down with partial project completion, the requirement to have the *qualified inspector* conduct inspections ceases if all areas disturbed as of the project shutdown date have achieved *final stabilization* and all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational. The *owner or operator* must notify the DOW Water (SPDES) Program contact at the Regional Office (see contact information in Appendix E) or, in areas subject to the review authority of *Traditional Land Use Control MS4 Operator(s)* in accordance with Part I.D.2.b.ii.1., the *Traditional Land Use Control MS4 Operator(s)* (provided the *Traditional Land Use Control MS4 Operator(s)* are not the *owners or operators* of the *construction activity*) in writing prior to the shutdown and again in writing prior to resuming *construction activity*. If soil disturbance activities are not resumed within 2 years from the date of shutdown, the *owner or operator* must terminate coverage by meeting the requirements of Part V; or

e. For *construction sites* involving soil disturbance of one (1) or more acres that *directly discharge* to one of the 303(d) segments listed in Appendix D or is located in one of the watersheds listed in Appendix C, the *qualified inspector* must conduct at least two (2) site inspections every seven (7) calendar days. The two (2) inspections must be separated by a minimum of two (2) full calendar days.

3. At a minimum, the *qualified inspector* must inspect:

   a. all erosion and sediment control practices and pollution prevention measures to ensure integrity and effectiveness; and

   b. all SMPs under construction to ensure that they are constructed in conformance with the *SWPPP*; and

   c. all areas of disturbance that have not achieved *final stabilization*; and

   d. all points of *discharge* to *surface waters of the State* located within, or immediately adjacent to, the property boundaries of the *construction site*; and

   e. all points of *discharge* from the *construction site*.

4. The *qualified inspector* must prepare an inspection report subsequent to each and every inspection. At a minimum, the inspection report must include and/or address all of the following, for all *construction activities* except those listed in Part IV.C.1.:

   a. Permit identification number; and

   b. Date and time of inspection; and

   c. Name and title of person(s) performing inspection; and

   d. A description of the weather and soil conditions (e.g. dry, wet, saturated) at the time of the inspection, including the temperature at the time of the inspection; and

   e. A description of the condition of the runoff at all points of *discharge* from the *construction site*. This must include identification of any *discharges* of sediment from the *construction site*. Include *discharges* from conveyance systems (i.e. pipes, culverts, ditches, etc.) and overland flow; and

   f. A description of the condition of all *surface waters of the State* located within, or immediately adjacent to, the property boundaries of the *construction site* which receive runoff from disturbed areas. This must include identification of any *discharges* of sediment to the *surface waters of the State*; and

   g. Identification of all erosion and sediment control practices and pollution prevention measures that need repair or maintenance; and

   h. Identification of all erosion and sediment control practices and pollution prevention measures that were not installed properly or are not functioning as designed and need to be reinstalled or replaced; and

   i. Description and sketch (map) of areas with active soil disturbance activity, areas that have been disturbed but are inactive at the time of the inspection, and areas that have been stabilized (temporary and/or final) since the last inspection; and

   j. Estimates, in square feet or acres, of the following areas:

i. Total area with active soil disturbance (not requiring either *temporary stabilization* or *final stabilization*); and

ii. Total area with inactive soil disturbance (requiring either *temporary stabilization* or *final stabilization*); and

iii. Total area that has achieved *temporary stabilization*; and

iv. Total area that has achieved *final stabilization*; and

k. Current stage of construction of all SMPs and identification of all *construction activity* on site that is not in conformance with the *SWPPP* and technical standards; and

l. Corrective action(s) that must be taken to install, repair, replace or maintain erosion and sediment control practices and pollution prevention measures; and to correct deficiencies identified with the construction of the SMP(s); and

m. Identification and status of all corrective actions that were required by previous inspection; and

n. Digital photographs, with date stamp, that clearly show the condition of all practices that have been identified as needing corrective actions. The *qualified inspector* must attach color copies of the digital photographs to the inspection report being maintained onsite within seven (7) calendar days of the date of the inspection. The *qualified inspector* must also take digital photographs, with date stamp, that clearly show the condition of the practice(s) after the corrective action has been completed. The *qualified inspector* must attach paper color copies of the digital photographs to the inspection report that documents the completion of the corrective action work within seven (7) calendar days of that inspection.

5. Within one business day of the completion of an inspection, the *qualified inspector* must notify the *owner or operator*, and appropriate contractor or subcontractor identified in Part III.A.7., of any corrective actions that need to be taken. The contractor or subcontractor must:

a. if the corrective action does not require engineering design:

i. begin implementing corrective actions within one business day; and

ii. complete the corrective actions within five business days; or

b. if the corrective action requires engineering design:

i. begin the engineering design process within five business days; and

ii. complete the corrective action in a reasonable time frame but no later than within 60 calendar days.

6. All inspection reports must be signed by the *qualified inspector.* In accordance with Part I.E.3., the inspection reports must be maintained on site with the *SWPPP*.

Part V. How to Terminate CGP Coverage

A. Electronic Notice of Termination (eNOT) Submittal

The eNOT contains questions to ensure requirements in Part V.A. have been met.

1. An *owner or operator* must terminate coverage when one or more of the following requirements have been met:

a. Total project completion:

i. all *construction activity* identified in the *SWPPP* has been completed; and

ii. all areas of disturbance have achieved *final stabilization*; and

iii. all temporary, structural erosion and sediment control measures have been removed; and

iv. all SMPs have been constructed in conformance with the *SWPPP* and are operational; and

v. an as-built drawing has been prepared; or

b. Planned shutdown with partial project completion:

   i. all soil disturbance activities have ceased; and

   ii. all areas disturbed as of the project shutdown date have achieved *final stabilization*; and

   iii. all temporary, structural erosion and sediment control measures have been removed; and

   iv. all SMPs required for the completed portion of the project have been constructed in conformance with the *SWPPP* and are operational; and

   v. an as-built drawing has been prepared; or

c. In accordance with Part I.G. Change of Owner or Operator; or

d. The *owner or operator* has obtained coverage under an alternative general SPDES permit or an individual SPDES permit.

2. For *construction activities* that require *qualified inspector* inspections in accordance with Part IV.C.1. and have met Part V.A.1.a. or b., the *owner or operator* must have the *qualified inspector* perform a final site inspection prior to submitting the eNOT. The *qualified inspector* must, by signing the "Final Stabilization" and "Post-Construction Stormwater Management Practice(s)" certification statements on the eNOT, certify that all the requirements in Part V.A.1.a. or b. have been achieved.

3. For *construction activities* that are subject to the review authority of *Traditional Land Use Control MS4 Operator(s)* in accordance with Part I.D.2.b.ii.1. and meet Part V.A.1.a. or b., the *owner or operator* must have the *Traditional Land Use Control MS4 Operator(s)* sign the "MS4 Acceptance" statement on the eNOT in accordance with the requirements in Part VII.J. A *Traditional Land Use Control MS4 Operator* official, by signing this statement, determined that it is acceptable for the *owner or operator* to submit the eNOT in accordance with the requirements of this Part. A *Traditional Land Use Control MS4 Operator* can make this determination by performing a final site inspection themselves or by accepting the *qualified inspector*'s final site inspection certification(s) when required in Part V.A.2.

4. For *construction activities* that require SMPs and meet Part V.A.1.a. or b., the *owner or operator* must, prior to submitting the eNOT, ensure one of the following:

    a. for SMP(s) that were constructed by a private entity, but will be owned, operated, and maintained by a public entity, the SMP(s) and any right-of-way(s) needed to operate and maintain such practice(s) have been deeded to the municipality in which the practice(s) is located; or

    b. for SMP(s) that are privately owned, but will be operated and maintained by a public entity, an executed operation and maintenance agreement is in place with the municipality that will operate and maintain the SMP(s); or

    c. for SMP(s) that are privately owned, the *owner or operator* has a mechanism in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the *owner or operator's* deed of record; or

    d. for SMP(s) that are owned by a public or private institution (e.g. school, university, hospital), government agency or authority, or public utility, the *owner or operator* has policies and procedures in place that ensure operation and maintenance of the practices in accordance with the operation and maintenance plan.

5. An *owner or operator* that has met the requirements of Part V.A.1., 2., 3., and 4. must request termination of coverage under this permit by submitting a complete Notice of Termination form electronically using a NYSDEC approved form.[5]

    a. The owner's or operator's coverage is terminated as of the termination date indicated in the Letter of Termination (LOT), which is sent by NYSDEC after a complete eNOT is submitted.

[5] Unless NYSDEC grants a waiver in accordance with 40 CFR 127.15(c) or (d). All waiver requests must be submitted to Stormwater_info@dec.ny.gov or NYSDEC, Bureau of Water Permits, 625 Broadway, 4th Floor, Albany, New York 12233-3505.

Part VI. Record Retention and Reporting

A. Record Retention

The *owner or operator* must retain a copy of the documents listed in Part I.E.3. and a copy of the LOT for a period of at least five years from the date that NYSDEC accepts a complete NOT submitted in accordance with Part V.

B. Reporting

Except for the eNOI, the signature forms associated with the eNOI, and the eNOT, all other written correspondence requested by NYSDEC, including individual permit applications, must be sent to the address of the appropriate DOW (SPDES) Program contact at the Regional Office listed in Appendix E.

Part VII. Standard Permit Requirements

For the purposes of this permit, examples of contractors and subcontractors include: third-party maintenance and construction contractors.

A. Duty to Comply

The *owner or operator*, and all contractors or subcontractors, must comply with all requirements of this permit. Any non-compliance with the requirements of this permit constitutes a violation of the New York State Environmental Conservation Law (ECL), and its implementing regulations, and is grounds for enforcement action. Filing of a request for termination of coverage under this permit, or a notification of planned changes or anticipated non-compliance, does not limit, diminish or stay compliance with any requirements of this permit.

B. Need to Halt or Reduce Activity Not a Defense

The necessity to halt or reduce the *construction activity* regulated by this permit, in order to maintain compliance with the requirements of this permit, must not be a defense in an enforcement action.

C. Penalties

There are substantial criminal, civil, and administrative penalties associated with violating the requirements of this permit. Fines of up to $37,500 per day for each

violation and imprisonment for up to 15 years may be assessed depending upon the nature and degree of the offense.

D. False Statements

Any person who knowingly makes any false material statement, representation, or certification in any application, record, report, or other document filed or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance must, upon conviction, be punished in accordance with ECL §71-1933 and or New York State Penal Law Articles 175 and 210.

E. Re-Opener Clause

Upon issuance of this permit, a determination has been made on the basis of a submitted Notice of Intent, plans, or other available information, that compliance with the specified permit requirements will reasonably protect classified water use and assure compliance with applicable *water quality standards*. Satisfaction of the requirements of this permit notwithstanding, if operation pursuant to this permit causes or contributes to a condition in contravention of State *water quality standards* or guidance values, or if NYSDEC determines that a modification is necessary to prevent impairment of the best use of the waters or to assure maintenance of *water quality standards* or compliance with other provisions of ECL Article 17 or the Clean Water Act (CWA), or any regulations adopted pursuant thereto, NYSDEC may require such modification and the Commissioner may require abatement action to be taken by the *owner or operator* and may also prohibit such operation until the modification has been implemented.

F. Duty to Mitigate

The *owner or operator*, and its contractors and subcontractors, must take all reasonable steps to *minimize* or prevent any *discharge* in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

G. Requiring Another General Permit or Individual SPDES Permit

NYSDEC may require any *owner or operator* authorized to *discharge* in accordance with this permit to apply for and obtain an individual SPDES permit or apply for authorization to *discharge* in accordance with another general SPDES permit.

1. Cases where an individual SPDES permit or authorization to discharge in accordance with another general SPDES permit may be required include, but is not limited to the following:

a. the *owner or operator* is not in compliance with the conditions of this permit or does not meet the requirements for coverage under this permit; and

b. a change has occurred in the availability of demonstrated technology or practices for the control or abatement of *pollutants* applicable to the *point source*; and

c. new effluent limitation guidelines or new source performance standards are promulgated that are applicable to *point sources* authorized to *discharge* in accordance with this permit; and

d. existing effluent limitation guidelines or new source performance standards that are applicable to *point sources* authorized to *discharge* in accordance with this permit are modified; and

e. a water quality management plan containing requirements applicable to such *point sources* is approved by NYSDEC; and

f. circumstances have changed since the time of the request to be covered so that the *owner or operator* is no longer appropriately controlled under this permit, or either a temporary or permanent reduction or elimination of the authorized *discharge* is necessary; and

g. the *discharge* is in violation of section 17-0501 of the ECL; and

h. the *discharge(s)* is a significant contributor of *pollutants*. In making this determination, NYSDEC may consider the following factors:

   i. the location of the *discharge(s)* with respect to *surface waters of the State*; and

   ii. the size of the *discharge(s)*; and

   iii. the quantity and nature of the *pollutants discharged* to *surface waters of the State*; and

   iv. other relevant factors including compliance with other provisions of ECL Article 17, or the CWA.

2. When NYSDEC requires any *owner or operator* authorized by this permit to apply for an individual SPDES permit as provided for in this subdivision, it must notify the *owner or operator* in writing that a permit application is required. This notice must include a brief statement of the reasons for this decision, an application

form, a statement setting a time for the *owner or operator* to file the application for an individual SPDES permit, and a deadline, not sooner than 180 days from the *owner's or operator's* receipt of the notification letter, whereby the authorization to *discharge* under this permit must be terminated. NYSDEC may grant additional time upon demonstration, to the satisfaction of the RWE,[6] that additional time to apply for an alternative authorization is necessary or where NYSDEC has not provided a permit determination in accordance with 6 NYCRR Part 621.

3. When an individual SPDES permit is issued to an *owner or operator* authorized to *discharge* under this permit for the same *discharge(s)*, this permit authorization for *construction activities* authorized under the individual SPDES permit is automatically terminated on the effective date of the individual SPDES permit unless termination is earlier in accordance with 6 NYCRR Part 750.

H. Duty to Provide Information

The *owner or operator* must furnish to NYSDEC, within five business days, unless otherwise set forth by NYSDEC, any information that NYSDEC may request to determine whether cause exists to determine compliance with this permit or to determine whether cause exists for requiring an individual SPDES permit in accordance with 6 NYCRR 750-1.21(e) (see Part VII.G. Requiring Another General Permit or Individual Permit).

The *owner or operator* must make available to NYSDEC, for inspection and copying, or furnish to NYSDEC within 25 business days of receipt of a NYSDEC request for such information, any information retained in accordance with this permit.

Except for Part I.D.4. and 5. and Part I.G., the following applies: where the *owner or operator* becomes aware that it failed to submit any relevant facts on the Notice of Intent, or submitted incorrect information in a Notice of Intent or in any report to NYSDEC, the *owner or operator* must submit such facts or corrected information to NYSDEC within five business days.

I. Extension

In the event a new permit is not issued and effective prior to the expiration of this permit, and this permit is extended pursuant to the State Administrative Procedure Act and 6 NYCRR Part 621, then the *owner or operator* with coverage under this permit may continue to operate and *discharge* in accordance with the requirements of this permit until a new permit is issued and effective.

[6] The Regional Water Manager where a DEC Region does not have a RWE.

J. Signatories and Certification

The Notice of Intent, Notice of Termination, and reports required by this permit must be signed as provided in 40 CFR §122.22.

1. All Notices of Intent and Notices of Termination must be signed as follows:

    a. For a corporation. By a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

        (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation; or

        (ii) the manager of one or more manufacturing, production or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for Notice of Intent or Notice of Termination requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

        Note: NYSDEC does not require specific assignments or delegations of authority to responsible corporate officers identified in 40 CFR §122.22(a)(1)(i). NYSDEC will presume that these responsible corporate officers have the requisite authority to sign the Notice of Intent or Notice of Termination unless the corporation has notified NYSDEC to the contrary. Corporate procedures governing authority to sign a Notice of Intent or Notice of Termination may provide for assignment or delegation to applicable corporate positions under 40 CFR §122.22(a)(1)(ii) rather than to specific individuals.

    b. For a partnership or sole proprietorship. By a general partner or the proprietor, respectively.

c. For a municipality, State, Federal, or other public agency. By either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal agency includes:

    1. the chief executive officer of the agency; or

    2. a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of EPA).

2. All reports required by this permit, and other information requested by NYSDEC, must be signed by a person described in Part VII.J.1., or by a duly authorized representative of that person. A person is a duly authorized representative only if:

    a. The authorization is made in writing by a person described in Part VII.J.1. or using the Duly Authorized Form, found on the DEC website; and

    b. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and

    c. The written authorization is submitted to NYSDEC.

3. Changes to authorization. If an authorization under Part VII.J.2. is no longer accurate because a different individual or position has responsibility for the overall operation of the *construction activity*, a new authorization satisfying the requirements of Part VII.J.2. must be submitted to NYSDEC prior to or together with any reports, information, or applications to be signed by an authorized representative.

4. Certification. Any person signing a document under Part VII.J.1. or 2. must make the following certification:

    I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who

manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

5. Electronic reporting. If documents described in Part VII.J.1. or 2. are submitted electronically by or on behalf of the *construction activity* with coverage under this permit, any person providing the electronic signature for such documents must meet all relevant requirements of this section, and must ensure that all of the relevant requirements of 40 CFR Part 3 (including, in all cases, subpart D to Part 3) (Cross-Media Electronic Reporting) and 40 CFR Part 127 (NPDES Electronic Reporting Requirements) are met for that submission.

K. Inspection and Entry

The *owner or operator* must allow NYSDEC, the USEPA Regional Administrator, the applicable county health department, or any authorized representatives of those entities, or, in the case of a *construction site* which *discharges* through an *MS4*, an authorized representative of the *MS4* receiving the *discharge*, upon the presentation of credentials and other documents as may be required by law, to:

1. enter upon the *owner's or operator's* premises where a regulated facility or activity is located or conducted or where records must be kept under the requirements of this permit; and

2. have access to and copy at reasonable times, any records that must be kept under the requirements of this permit, including records required to be maintained for purposes of operation and maintenance; and

3. inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices or operations regulated or required under this permit; and

4. sample or monitor at reasonable times, for the purposes of assuring general SPDES permit compliance or as otherwise authorized by the CWA or ECL, any substances or parameters at any location; and

5. enter upon the property of any contributor to the regulated facility or activity under authority of the *owner or operator*.

L. Confidentiality of Information

The following must not be held confidential: this permit, the fact sheet for this permit, the name and address of any *owner or operator*, effluent data, the Notice of Intent, and information regarding the need to obtain an individual permit or an alternative general SPDES permit. This includes information submitted on forms themselves and any attachments used to supply information required by the forms (except information submitted on usage of substances). Upon the request of the *owner or operator*, NYSDEC must make determinations of confidentiality in accordance with 6 NYCRR Part 616, except as set forth in the previous sentence. Any information accorded confidential status must be disclosed to the Regional Administrator upon his or her written request. Prior to disclosing such information to the Regional Administrator, NYSDEC will notify the Regional Administrator of the confidential status of such information.

M. Other Permits May Be Required

Nothing in this permit relieves the *owner or operator* from a requirement to obtain any other permits required by law.

N. NYSDEC Orders or Civil Decrees/Judgments

The issuance of this permit by the NYSDEC, and the coverage under this permit by the *owner or operator*, does not supersede, revoke, or rescind any existing order on consent or civil Decree/Judgment, or modification to any such documents or to any order issued by the Commissioner, or any of the terms, conditions, or requirements contained in such order or modification therefore, unless expressly noted.

O. Property Rights

Coverage under this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations, nor does it obviate the necessity of obtaining the assent of any other jurisdiction as required by law for the *discharge* authorized.

P. Compliance with Interstate Standards

If the *construction activity* covered by this permit originates within the jurisdiction of an interstate water pollution control agency, then the *construction activity* must also comply with any applicable effluent standards or *water quality standards* promulgated by that interstate agency and as set forth in this permit for such *construction activities*.

Q. Oil and Hazardous Substance Liability

Coverage under this permit does not affect the imposition of responsibilities upon, or the institution of any legal action against, the *owner or operator* under section 311 of the CWA, which must be in conformance with regulations promulgated pursuant to section 311 governing the applicability of section 311 of the CWA to *discharges* from facilities with *NPDES* permits, nor must such issuance preclude the institution of any legal action or relieve the *owner or operator* from any responsibilities, liabilities, or penalties to which the *owner or operator* is or may be subject pursuant to the Comprehensive Environmental Response, Compensation and Liability Act of 1980, 42 U.S.C. section 9601 et seq. (CERCLA).

R. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, must not be affected thereby.

S. NYSDEC Approved Forms

The *owner or operator* must provide all relevant information that is requested by NYSDEC, and required by this permit, on all NYSDEC approved forms.

APPENDIX A – Abbreviations and Definitions

Abbreviations

APO – Agency Preservation Officer
BB – New York State Standards and Specifications for Erosion and Sediment Control (Blue Book), dated November 2016
BMP – Best Management Practice
CPESC – Certified Professional in Erosion and Sediment Control
CPv – Channel Protection Volume
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 et seq)
DM – New York State Stormwater Management Design Manual (Design Manual), dated July 31, 2024
DOW – Division of Water
EAF – Environmental Assessment Form
ECL – chapter 43-B of the Consolidated Laws of the State of New York, entitled the Environmental Conservation Law
EPA – U.S. Environmental Protection Agency
HSG – Hydrologic Soil Group
MS4 – Municipal Separate Storm Sewer System
NOI – Notice of Intent
NOT – Notice of Termination
NPDES – National Pollutant Discharge Elimination System
NYC – The City of New York
NYCDEP – The City of New York Department of Environmental Protection
NYSDEC – The New York State Department of Environmental Conservation
OPRHP – Office of Parks, Recreation and Historic Places
Qf – Extreme Flood
Qp – Overbank Flood
RR – Runoff Reduction
RRv – Runoff Reduction Volume
RWE – Regional Water Engineer
SEQR – State Environmental Quality Review Act
SHPA – State Historic Preservation Act
SMP – Post-Construction Stormwater Management Practice
SPDES – State Pollutant Discharge Elimination System
SWPPP – Stormwater Pollution Prevention Plan
TMDL – Total Maximum Daily Load
UPA – Uniform Procedures Act
USDA – United States Department of Agriculture
WQv – Water Quality Volume

Definitions

All definitions in this section are solely for the purposes of this permit. If a word is not italicized in the permit, use its common definition.

Agricultural Building – a structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products; excluding any structure designed, constructed or used, in whole or in part, for human habitation, as a place of employment where agricultural products are processed, treated or packaged, or as a place used by the public.

Agricultural Property – the land for construction of a barn, *agricultural building*, silo, stockyard, pen or other structural practices identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023).

Alter Hydrology from Pre- to Post-Development Conditions – the post-development peak flow rate(s) has increased by more than 5% of the pre-developed condition for the design storm of interest (e.g. 10 yr and 100 yr).

Combined Sewer System – a sewer system which conveys sewage and *stormwater* through a single pipe system to a publicly owned treatment works.

Commence (Commencement of) Construction Activities – the initial disturbance of soils associated with clearing, grading or excavation activities; or other construction related activities that disturb or expose soils such as demolition, stockpiling of fill material, and the initial installation of erosion and sediment control practices required in the *SWPPP*. See definition for "*Construction Activity(ies)*" also.

Common Plan of Development or Sale – a contiguous area where multiple separate and distinct *construction activities* are occurring, or may occur, under one plan. The "common plan" of development or sale is broadly defined as any announcement or piece of documentation (including a sign, public notice or hearing, marketing plan, advertisement, drawing, permit application, State Environmental Quality Review Act (SEQR) environmental assessment form or other documents, zoning request, computer design, etc.) or physical demarcation (including boundary signs, lot stakes, surveyor markings, etc.) indicating *construction activities* may occur on a specific plot. A *common plan of development or sale* is comprised of two or more *phases*.

Common plan of development or sale does not include separate and distinct *construction activities* that are occurring, or may occur, under one plan that are at least 1/4 mile apart provided any interconnecting road, pipeline or utility project that is part of the same "common plan" is not concurrently being disturbed.

Construction Activity(ies) – identified within 40 CFR 122.26(b)(14)(x), 122.26(b)(15)(i), and 122.26(b)(15)(ii), any clearing, grading, excavation, filling, demolition or stockpiling activities that result in soil disturbance. Clearing activities can include, but are not limited to, mechanized logging equipment operation, the cutting and skidding of trees, stump removal and/or brush root removal.

Construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, which is excluded from the calculation of the soil disturbance for a project. Routine maintenance includes, but is not limited to:

- Re-grading of gravel roads or parking lots; and
- Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity of the ditch; and
- Replacement of existing culverts that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity of a ditch; and
- Replacement of existing bridges that maintains the approximate original line and grade, and maintains or improves the hydraulic capacity beneath the bridges; and
- Cleaning and shaping of existing roadside ditches that does not maintain the approximate original grade, hydraulic capacity and purpose of the ditch if the changes to the line and grade, hydraulic capacity or purpose of the ditch are installed to improve water quality and quantity controls (e.g. installing grass lined ditch); and
- Placement of aggregate shoulder backing that stabilizes the transition between the road shoulder and the ditch or *embankment*; and
- Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and similar work that does not expose soil or disturb the bottom six (6) inches of subbase material; and
- Long-term use of equipment storage areas at or near highway maintenance facilities; and
- Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or *embankment*; and
- Existing use of Canal Corp owned upland disposal sites for the canal, and
- Replacement of curbs, gutters, sidewalks and guide rail posts; and
- Maintenance of ski trails including brush hog use and mowing; and
- Above ground snowmaking pipe replacement; and
- Replacement of existing utility poles; etc.

Construction Site – the land area where *construction activity(ies)* will occur. See also the definitions for "*Commence (Commencement of) Construction Activities"* and "*Common Plan of Development or Sale."*

Dewatering – the act of draining rainwater and/or groundwater from building foundations, vaults or excavations/trenches.

Directly Discharge(s)(ing) (to a specific surface waterbody) – runoff flows from a *construction site* by overland flow and the first point of *discharge* is the specific surface waterbody, or runoff flows from a *construction site* to a separate storm sewer system and the first point of *discharge* from the separate storm sewer system is the specific surface waterbody.

Discharge(s)(d) – any addition of any *pollutant* to waters of the State through an outlet or *point source*.

Embankment – an earthen or rock slope that supports a road/highway.

Equivalent (Equivalence) – the practice or measure meets all the performance, longevity, maintenance, and safety objectives of the technical standard and will provide an equal or greater degree of water quality protection.

Final Stabilization – all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other *equivalent* stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

Historic Property – any building, structure, site, object or district that is listed on the State or National Registers of Historic Places or is determined to be eligible for listing on the State or National Registers of Historic Places.

Impervious Area (Cover) – all impermeable surfaces that cannot effectively infiltrate rainfall. This includes paved, concrete and compacted gravel surfaces (i.e. parking lots, driveways, roads, runways and sidewalks); building rooftops and miscellaneous impermeable structures such as patios, pools, and sheds.

Infeasible – not technologically possible, or not economically practicable and achievable considering best industry practices.

Minimize(ing)(ation) – reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer System (MS4) - a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

1. owned or operated by a State, city, town, village, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, *stormwater*, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA, that *discharges* to *surface waters of the State*; and

2. designed or used for collecting or conveying *stormwater*; and

3. which is not a *combined sewer system*; and

4. which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

Natural Buffer(s) – an undisturbed area with natural cover running along a surface water (e.g. wetland, stream, river, lake, etc.).

New Development – any land disturbance that does not meet the definition of *Redevelopment Activity* included in this appendix.

New York State Erosion and Sediment Control Certificate Program – a certificate program that establishes and maintains a process to identify and recognize individuals who are capable of developing, designing, inspecting and maintaining erosion and sediment control plans on projects that disturb soils in New York State. The certificate program is administered by the New York State Conservation District Employees Association.

Nonpoint Source(s) – any source of water pollution or *pollutants* which is not a discrete conveyance or *point source* permitted pursuant to Title 7 or 8 of Article 17 of the Environmental Conservation Law (see ECL Section 17-1403).

Overbank – flow events that exceed the capacity of the stream channel and spill out into the adjacent floodplain.

Owner or Operator – the person, persons, or legal entity which owns or leases the property on which the *construction activity* is occurring; an entity that has operational control over the construction plans and specifications, including the ability to make modifications to the plans and specifications; and/or an entity that has day-to-day operational control of those activities at a project that are necessary to ensure compliance with the permit requirements.

Performance Criteria – the six performance criteria for each group of SMPs in Chapters 5 and 6 of the technical standard, New York State Stormwater Management Design Manual (DM), dated July 31, 2024. These include feasibility, conveyance, pretreatment, treatment, landscaping, and maintenance. It does not include the *Sizing Criteria* (i.e. WQv, RRv, CPv, Qp and Qf) in Part I.C.2. of the permit.

Phase – a defined area in which *construction activities* are occurring or will occur separate from other defined area(s).

Point Source – any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel or other floating craft, or landfill leachate collection system from which *pollutants* are or may be *discharged*.

Pollutant(s) – dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast *discharged* into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in 6 NYCRR Parts 700 et seq.

Qualified Inspector – a person that is knowledgeable in the principles and practices of erosion and sediment control, such as a licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, *New York State Erosion and Sediment Control Certificate Program* holder or other NYSDEC endorsed individual(s).

It can also mean someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided that person has training in the principles and practices of erosion and sediment control. Training in the principles and practices of erosion and sediment control means that the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect has received four (4) hours of NYSDEC endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity. After receiving the initial training, the individual working under the direct supervision of the licensed Professional Engineer or Registered Landscape Architect shall receive four (4) hours of training every three (3) years.

It can also mean a person that meets the *Qualified Professional* qualifications in addition to the *Qualified Inspector* qualifications.

Note: Inspections of any SMPs that include structural components, such as a dam for an impoundment, shall be performed by a licensed Professional Engineer.

Qualified Professional – a person that is knowledgeable in the principles and practices of *stormwater* management and treatment, such as a licensed Professional Engineer, Registered Landscape Architect or other NYSDEC endorsed individual(s). Individuals preparing *SWPPPs* that require the SMP component must have an understanding of the principles of hydrology, water quality management practice design, water quantity control design, and, in many cases, the principles of hydraulics. All components of the *SWPPP* that involve the practice of engineering, as defined by the NYS Education Law (see Article 145), shall be prepared by, or under the direct supervision of, a professional engineer licensed to practice in the State of New York.

Redevelopment Activity(ies) – the disturbance and reconstruction of existing *impervious area*, including *impervious areas* that were removed from a project site within five (5) years of preliminary project plan submission to the local government (i.e. site plan, subdivision, etc.).

Renewable Energy – electricity or thermal energy generated by renewable energy systems through use of the following technologies: solar thermal, photovoltaics, on land and offshore wind, hydroelectric, geothermal electric, geothermal ground source heat, tidal energy, wave energy, ocean thermal, and fuel cells which do not utilize a fossil fuel resource in the process of generating electricity.

Site Limitations – site conditions that prevent the use of an infiltration technique and or infiltration of the total WQv. Typical *site limitations* include: seasonal high groundwater, shallow depth to bedrock, and soils with an infiltration rate less than 0.5 inches/hour. The existence of *site limitations* shall be confirmed and documented using actual field testing (i.e. test pits, soil borings, and infiltration test) or using information from the most current United States Department of Agriculture (USDA) Soil Survey for the County where the project is located.

Sizing Criteria – the criteria included in Part I.C.2 of the permit that are used to size SMPs. The criteria include; Water Quality Volume (WQv), Runoff Reduction Volume (RRv), Channel Protection Volume (Cpv), *Overbank* Flood (Qp), and Extreme Flood (Qf).

Steep Slope – land area designated on the current United States Department of Agriculture (USDA) Soil Survey as Soil Slope Phase D, (provided the map unit name or description is inclusive of slopes greater than 25%), or Soil Slope Phase E or F, (regardless of the map unit name), or a combination of the three designations.

Stormwater – that portion of precipitation that, once having fallen to the ground, is in excess of the evaporative or infiltrative capacity of soils, or the retentive capacity of surface features, which flows or will flow off the land by surface runoff to waters of the State.

Streambank – the terrain alongside the bed of a creek or stream. The bank consists of the sides of the channel, between which the flow is confined.

Stormwater Pollution Prevention Plan (SWPPP) – a project specific report, including construction drawings, that among other things: describes the *construction activity(ies)*, identifies the potential sources of pollution at the *construction site*; describes and shows the *stormwater* controls that will be used to control the *pollutants* (i.e. erosion and sediment controls; for many projects, includes SMPs); and identifies procedures the *owner or operator* will implement to comply with the requirements of the permit. See Part III of the permit for a complete description of the information that must be included in the *SWPPP*.

Surface Waters of the State – shall be construed to include lakes, bays, sounds, ponds, impounding reservoirs, springs, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic ocean within the territorial seas of the state of New York and all other bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters that do not combine or effect a junction with natural surface waters), which are wholly or partially within or bordering the state or within its jurisdiction. Waters of the state are further defined in 6 NYCRR Parts 800 to 941.

Temporarily Ceased – an existing disturbed area will not be disturbed again within 14 calendar days of the previous soil disturbance.

Temporary Stabilization – exposed soil has been covered with material(s) as set forth in the technical standard, New York Standards and Specifications for Erosion and Sediment Control, to prevent the exposed soil from eroding. The materials can include, but are not limited to, mulch, seed and mulch, and erosion control mats (e.g. jute twisted yarn, excelsior wood fiber mats).

Total Maximum Daily Load (TMDL) – the sum of the allowable loads of a single *pollutant* from all contributing point and *nonpoint source*s. It is a calculation of the maximum amount of a *pollutant* that a waterbody can receive and still meet *water quality standards*, and an allocation of that amount to the *pollutant's* sources. A TMDL stipulates Waste Load Allocations (WLA) for *point source discharges*, Load Allocations (LA) for *nonpoint source*s, and a margin of safety (MOS).

Traditional Land Use Control MS4 Operator – a city, town, or village with land use control authority that is authorized to *discharge* under New York State DEC's SPDES General Permit For Stormwater Discharges from Municipal Separate Stormwater Sewer Systems (MS4s) or the City of New York's Individual SPDES Permit for their Municipal Separate Storm Sewer Systems (NY-0287890).

Trained Contractor – an employee from the contracting (construction) company, identified in Part III.A.7., that has received four (4) hours of NYSDEC endorsed training

in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity. After receiving the initial training, the *trained contractor* shall receive four (4) hours of training every three (3) years.

It can also mean an employee from the contracting (construction) company, identified in Part III.A.7., that meets the *qualified inspector* qualifications (e.g. licensed Professional Engineer, Certified Professional in Erosion and Sediment Control (CPESC), Registered Landscape Architect, *New York State Erosion and Sediment Control Certificate Program* holder, or someone working under the direct supervision of, and at the same company as, the licensed Professional Engineer or Registered Landscape Architect, provided they have received four (4) hours of NYSDEC endorsed training in proper erosion and sediment control principles from a Soil and Water Conservation District, or other NYSDEC endorsed entity).

The *trained contractor* is responsible for the day-to-day implementation of the *SWPPP*.

Tree Clearing – *construction activities* limited to felling and removal of trees.

Tree clearing does not include hand felling and leaving the trees in place with no support from mechanized equipment, which is not considered *construction activity* requiring coverage under this permit.

Water Quality Standard – such measures of purity or quality for any waters in relation to their reasonable and necessary use as promulgated in 6 NYCRR Part 700 et seq.

APPENDIX B – Required SWPPP Components by Project Type

Table 1
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following *construction activities* that involve soil disturbances of one (1) or more acres of land, but less than five (5) acres:

- Single-family home not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D
- Single-family residential subdivisions with 25% or less *impervious cover* at total site build-out and not located in one of the watersheds listed in Appendix C and not *directly discharging* to one of the 303(d) segments listed in Appendix D
- Construction of a barn or other *agricultural building*, silo, stock yard or pen.
- Structural agricultural conservation practices as identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023) that include construction or reconstruction of *impervious area* or *alter hydrology from pre- to post-development* conditions.

The following *construction activities* that involve soil disturbances between five thousand (5000) square feet and one (1) acre of land:

- All construction activities located in the New York City Watershed located east of the Hudson River, see Appendix C Figure 1, that involve soil disturbances between five thousand (5,000) square feet and one (1) acre of land.

Within the municipal boundaries of NYC:

- Stand-alone road reconstruction, where the total soil disturbance from only that road construction, is less than one (1) acre of land.

The following *construction activities*:

- Installation of underground linear utilities; such as gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains, and water mains
- Environmental enhancement projects, such as wetland mitigation, *stormwater* retrofits, stream restoration, and resiliency projects that reconstruct shoreline areas to address sea level rise
- Pond construction
- Linear bike paths running through areas with vegetative cover, including bike paths surfaced with an *impervious cover*
- Cross-country ski trails, walking/hiking trails, and mountain biking trails, including a de minimis parking lot (maximum 10 spaces total, sized for passenger cars) with 35 feet minimum preservation of undisturbed area downgradient from the parking lot
- Dam rehabilitation (the structure of the dam itself)
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are not part of residential, commercial, or institutional development;
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that include incidental shoulder or curb work along an existing highway to support construction of the sidewalk, bike path, or walking path.

Table 1 (Continued)
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT ONLY INCLUDES EROSION AND SEDIMENT CONTROLS

The following *construction activities*:

- Slope stabilization
- Slope flattening that changes the grade of the site, but does not significantly change the runoff characteristics
- Spoil areas that will be covered with vegetation
- Vegetated open space (i.e. recreational parks, lawns, meadows, fields, downhill ski trails) that do not *alter hydrology from pre- to post-development* conditions
- Athletic fields (natural grass) that do not include the construction or reconstruction of *impervious area* and do not *alter hydrology from pre- to post-development* conditions
- Demolition where vegetation will be established, and no *redevelopment activity* is planned[1]
- Installation or replacement of either an overhead electric transmission line or a ski lift tower that does not include the construction of permanent access roads or parking areas surfaced with *impervious cover*.
- Solar array field areas that have tables elevated off the ground, spaced one table width apart, do not *alter hydrology from pre- to post-development conditions*, and address water quality volume and runoff reduction volume by maintaining sheet flow on slopes less than 8%.
- Structural agricultural conservation practices as identified in Table II in the "Agricultural Best Management Practice Systems Catalogue" (dated June 2023) that do not include construction or reconstruction of *impervious area* and do not *alter hydrology from pre- to post-development* conditions.
- Temporary access roads, median crossovers, detour roads, lanes, or other temporary *impervious areas* that will be restored to pre-construction conditions once the *construction activity* is complete (in this context, "temporary" means the *impervious area* will be in place for two years or less)
- Other *construction activities* that do not include the construction or reconstruction of *impervious area*, and do not *alter hydrology from pre- to post-development* conditions, and are not listed in Table 2.

1. If the site is redeveloped in the future, a new eNOI must be submitted.

Table 2
CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES (SMPS)

The following *construction activities*:

- Single-family home located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix D
- Single-family home that disturbs five (5) or more acres of land
- Single-family residential subdivisions located in one of the watersheds listed in Appendix C or *directly discharging* to one of the 303(d) segments listed in Appendix D
- Single-family residential subdivisions that involve soil disturbances of between one (1) and five (5) acres of land with greater than 25% *impervious cover* at total site build-out
- Single-family residential subdivisions that involve soil disturbances of between 20,000 square feet and one (1) acre of land within the municipal boundaries of NYC with greater than 25% *impervious cover* at total site build-out
- Single-family residential subdivisions that involve soil disturbances of five (5) or more acres of land, and single-family residential subdivisions that involve soil disturbances of less than five (5) acres that are part of a *common plan of development or sale* that will ultimately disturb five (5) or more acres of land
- Multi-family residential developments; includes duplexes, townhomes, condominiums, senior housing complexes, apartment complexes, and mobile home parks
- Creation of 5,000 square feet or more of *impervious area* in the municipal boundaries of NYC
- Airports
- Amusement parks
- Breweries, cideries, and wineries, including establishments constructed on agricultural land
- Campgrounds
- Cemeteries that include the construction or reconstruction of *impervious area* (>5% of disturbed area) or *alter the hydrology from pre- to post-development* conditions
- Commercial developments
- Churches and other places of worship
- Construction of a barn or other *agricultural building* (e.g. silo) that involves soil disturbance greater than five acres.
- Structural agricultural conservation practices as identified in Table II in the “Agricultural Best Management Practice Systems Catalogue” (dated June 2023) that involves soil disturbance greater than five acres and include the construction or reconstruction of *impervious area* or *alter hydrology from pre- to post-development* conditions.
- Facility buildings, including ski lodges, restroom buildings, pumphouses, ski lift terminals, and maintenance and groomer garages
- Institutional development; includes hospitals, prisons, schools and colleges
- Industrial facilities; includes industrial parks
- Landfills; including creation of landfills or capping landfills.
- Municipal facilities; includes highway garages, transfer stations, office buildings, POTWs, water treatment plants, and water storage tanks
- Golf courses
- Office complexes

Table 2 (Continued)

CONSTRUCTION ACTIVITIES THAT REQUIRE THE PREPARATION OF A *SWPPP* THAT INCLUDES POST-CONSTRUCTION STORMWATER MANAGEMENT PRACTICES (SMPS)

The following *construction activities*:

- Permanent laydown yards and equipment storage lots
- Playgrounds that include the construction or reconstruction of *impervious area*
- Sports complexes
- Racetracks; includes racetracks with earthen (dirt) surfaces
- Road construction or reconstruction, outside the municipal boundaries of NYC
- Road construction within the municipal boundaries of NYC
- Stand-alone road reconstruction, within the municipal boundaries of NYC where the total soil disturbance from that road reconstruction involves soil disturbance of one (1) acre or more of land
- Parking lot construction or reconstruction (as with all Table 2 bullets, this includes parking lots constructed as part of the *construction activities* listed in Table 1, unless a Table 1 bullet specifies otherwise)
- Athletic fields (natural grass) that include the construction or reconstruction of *impervious area* (>5% of disturbed area) or *alter the hydrology from pre- to post-development* conditions
- Athletic fields with artificial turf
- Permanent access roads, parking areas, substations, compressor stations, and well drilling pads, surfaced with *impervious cover,* and constructed as part of an overhead electric transmission line, wind-power, cell tower, oil or gas well drilling, sewer or water main, ski lift, or other linear utility project
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are part of a residential, commercial or institutional development
- Sidewalks, bike paths, or walking paths, surfaced with an *impervious cover*, that are part of highway construction or reconstruction
- Solar array field areas on slopes greater than 8% that cannot maintain sheet flow using management practices identified in the BB or the DM
- Solar array field areas on slopes less than 8% that will *alter the hydrology from pre- to post-development* conditions
- Solar array field areas with tables that are not elevated high enough to achieve *final stabilization* beneath the tables
- Traditional *impervious areas* associated with solar development (e.g. roads, buildings, transformers)
- Utility pads surfaced with *impervious cover*, including electric vehicle charging stations
- All other *construction activities* that include the construction or reconstruction of *impervious area* or *alter the hydrology from pre- to post-development* conditions, and are not listed in Table 1

APPENDIX C – Watersheds Requiring Enhanced Phosphorus Removal

Watersheds where *owners or operators* of *construction activities* identified in Table 2 of Appendix B must prepare a *SWPPP* that includes SMPs designed in conformance with the Enhanced Phosphorus Removal Standards included in the DM technical standard.

- Entire New York City Watershed located east of the Hudson River – Figure 1
- Onondaga Lake Watershed – Figure 2
- Greenwood Lake Watershed – Figure 3
- Oscawana Lake Watershed – Figure 4
- Kinderhook Lake Watershed – Figure 5

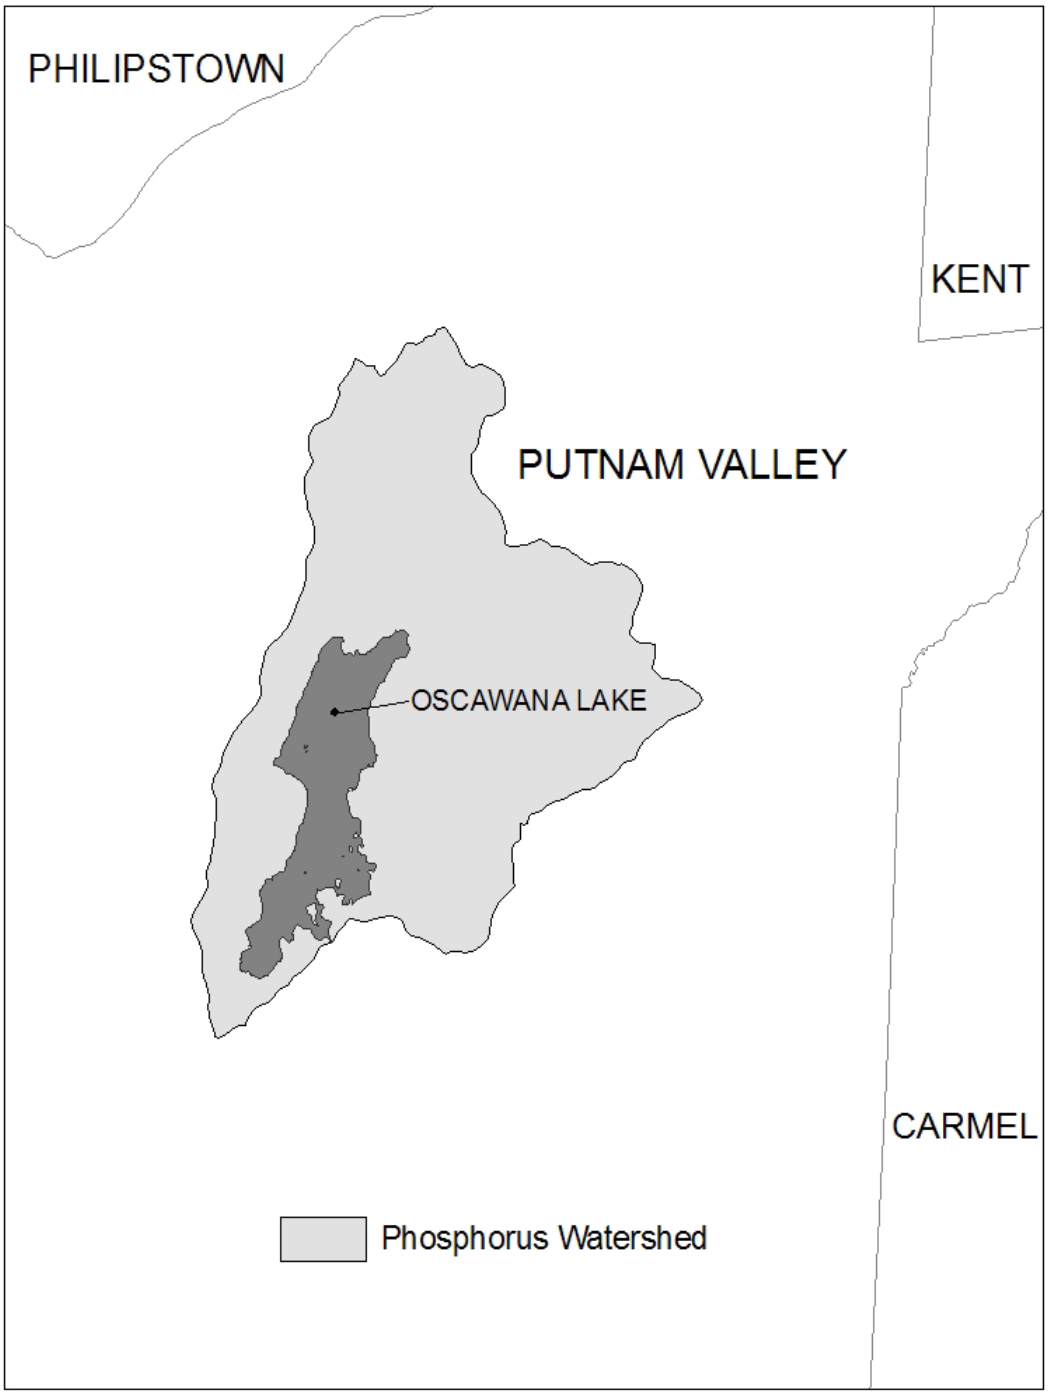

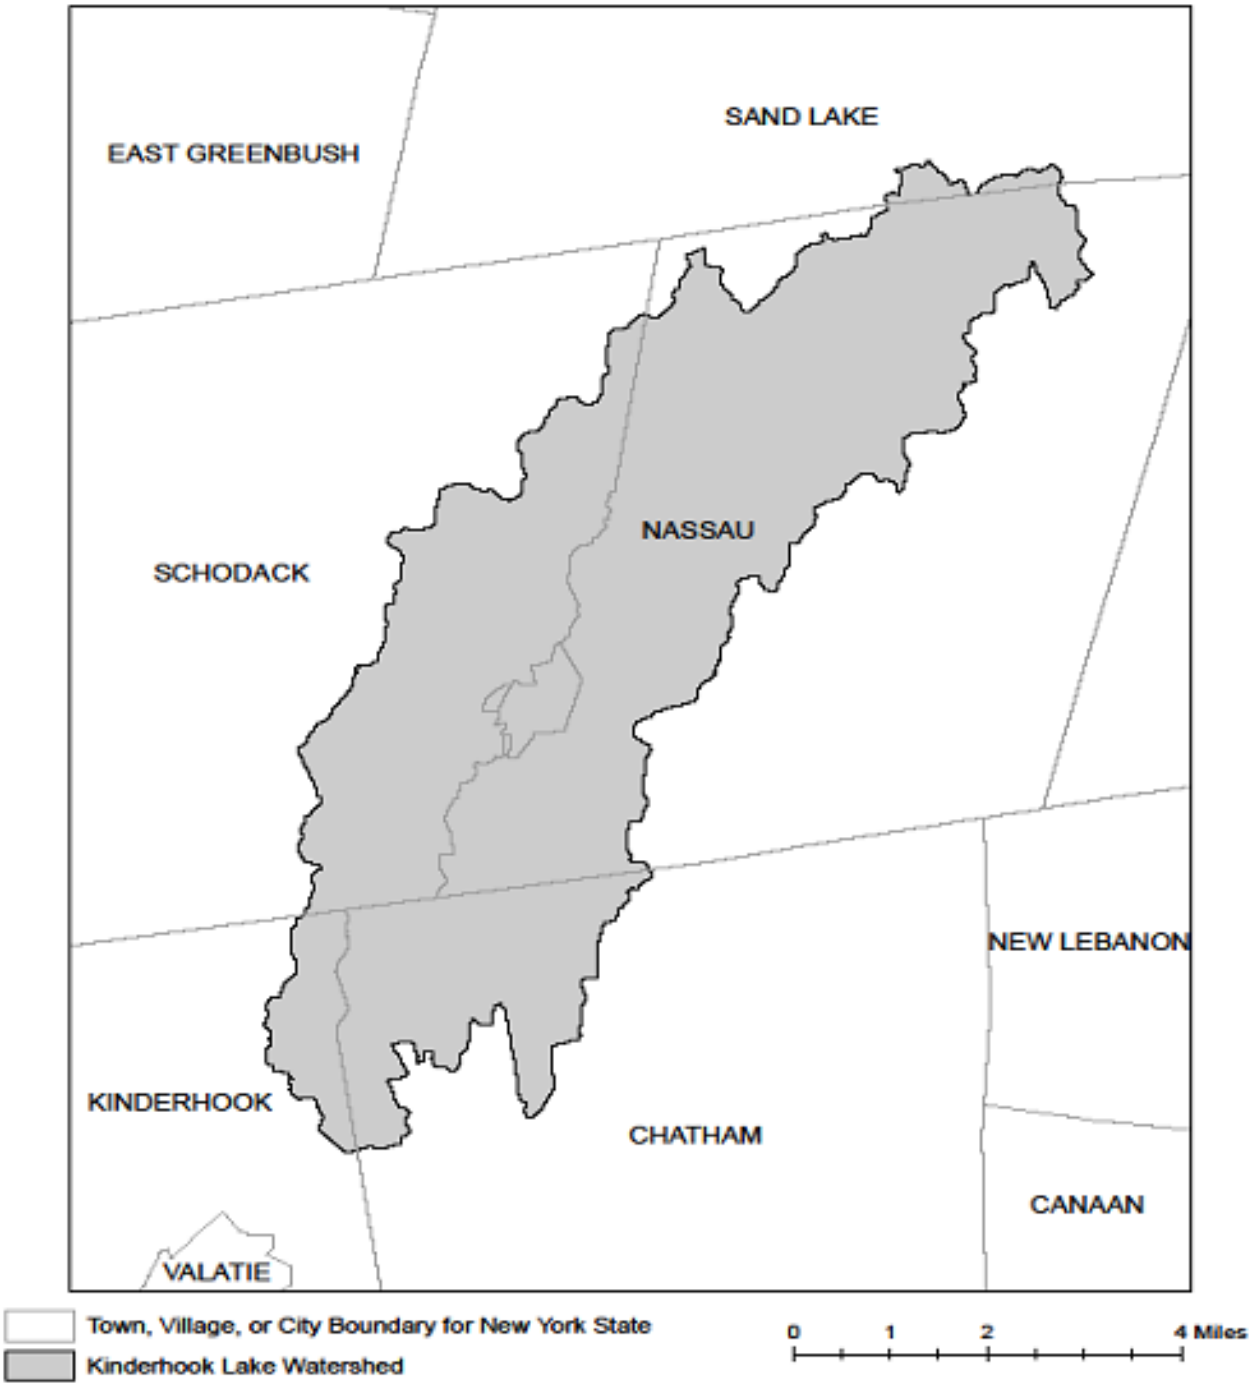

Figure 5 - Kinderhook Lake Watershed

APPENDIX D – Impaired Waterbodies (by Construction Related Pollutants)

List of waterbodies impaired by *pollutants* related to *construction activity*, including turbidity, silt/sediment, and nutrients (e.g. nitrogen, phosphorus). This list is a subset of "The Final New York State 2018 Section 303(d) List of Impaired Waters Requiring a TMDL" dated June 2020.

County	Waterbody	Pollutant
Albany	Ann Lee (Shakers) Pond, Stump Pond (1201-0096)	Phosphorus
Albany	Lawsons Lake (1301-0235)	Phosphorus
Allegany	Amity Lake, Saunders Pond (0403-0054)	Phosphorus
Allegany	Andover Pond (0403-0056)	Phosphorus
Bronx	Reservoir No.1/Lake Isle (1702-0075)	Phosphorus
Bronx	Van Cortlandt Lake (1702-0008)	Phosphorus
Broome	Blueberry, Laurel Lakes (1404-0033)	Phosphorus
Broome	Fly Pond, Deer Lake (1404-0038)	Phosphorus
Broome	Minor Tribs to Lower Susquehanna (0603-0044)	Phosphorus
Broome	Whitney Point Lake/Reservoir (0602-0004)	Phosphorus
Cattaraugus	Allegheny River/Reservoir (0201-0023)	Phosphorus
Cattaraugus	Beaver Lake/Alma Pond (0201-0073)	Phosphorus
Cattaraugus	Case Lake (0201-0020)	Phosphorus
Cattaraugus	Linlyco/Club Pond (0201-0035)	Phosphorus
Cayuga	Duck Lake (0704-0025)	Phosphorus
Cayuga	Owasco Inlet, Upper, and tribs (0706-0014)	Nutrients
Chautauqua	Chadakoin River and tribs (0202-0018)	Phosphorus
Chautauqua	Hulburt/Clymer Pond (0202-0079)	Phosphorus
Chautauqua	Middle Cassadaga Lake (0202-0002)	Phosphorus
Clinton	Great Chazy River, Lower, Main Stem (1002-0001)	Silt/Sediment
Columbia	Robinson Pond (1308-0003)	Phosphorus
Cortland	Dean Pond (0602-0077)	Phosphorus
Dutchess	Fallkill Creek (1301-0087)	Phosphorus
Dutchess	Hillside Lake (1304-0001)	Phosphorus
Dutchess	Wappingers Lake (1305-0001)	Phosphorus
Dutchess	Wappingers Lake (1305-0001)	Silt/Sediment
Erie	Beeman Creek and tribs (0102-0030)	Phosphorus
Erie	Delaware Park Pond (0101-0026)	Phosphorus
Erie	Ellicott Creek, Lower, and tribs (0102-0018)	Phosphorus
Erie	Ellicott Creek, Lower, and tribs (0102-0018)	Silt/Sediment
Erie	Green Lake (0101-0038)	Phosphorus
Erie	Little Sister Creek, Lower, and tribs (0104-0045)	Phosphorus
Erie	Murder Creek, Lower, and tribs (0102-0031)	Phosphorus

Erie	Rush Creek and tribs (0104-0018)	Phosphorus
Erie	Scajaquada Creek, Lower, and tribs (0101-0023)	Phosphorus
Erie	Scajaquada Creek, Middle, and tribs (0101-0033)	Phosphorus
Erie	Scajaquada Creek, Upper, and tribs (0101-0034)	Phosphorus
Erie	South Branch Smoke Cr, Lower, and tribs (0101-0036)	Phosphorus
Erie	South Branch Smoke Cr, Lower, and tribs (0101-0036)	Silt/Sediment
Genesee	Bigelow Creek and tribs (0402-0016)	Phosphorus
Genesee	Black Creek, Middle, and minor tribs (0402 0028)	Phosphorus
Genesee	Black Creek, Upper, and minor tribs (0402-0048)	Phosphorus
Genesee	Bowen Brook and tribs (0102-0036)	Phosphorus
Genesee	LeRoy Reservoir (0402-0003)	Phosphorus
Genesee	Mill Pond (0402-0050)	Phosphorus
Genesee	Oak Orchard Cr, Upper, and tribs (0301-0014)	Phosphorus
Genesee	Oatka Creek, Middle, and minor tribs (0402-0031)	Phosphorus
Genessee	Tonawanda Cr, Middle, Main Stem (0102-0002)	Phosphorus
Greene	Schoharie Reservoir (1202-0012)	Silt/Sediment
Greene	Sleepy Hollow Lake (1301-0059)	Silt/Sediment
Herkimer	Steele Creek tribs (1201-0197)	Phosphorus
Herkimer	Steele Creek tribs (1201-0197)	Silt/Sediment
Kings	Hendrix Creek (1701-0006) 18	Nitrogen
Kings	Prospect Park Lake (1701-0196)	Phosphorus
Lewis	Mill Creek/South Branch, and tribs (0801-0200)	Nutrients
Livingston	Christie Creek and tribs (0402-0060)	Phosphorus
Livingston	Conesus Lake (0402-0004)	Phosphorus
Livingston	Mill Creek and minor tribs (0404-0011)	Silt/Sediment
Monroe	Black Creek, Lower, and minor tribs (0402-0033)	Phosphorus
Monroe	Buck Pond (0301-0017)	Phosphorus
Monroe	Cranberry Pond (0301-0016)	Phosphorus
Monroe	Durand, Eastman Lakes (0302-0037)	Phosphorus
Monroe	Lake Ontario Shoreline, Western (0301-0069) 9	Phosphorus
Monroe	Long Pond (0301-0015)	Phosphorus
Monroe	Mill Creek and tribs (0302-0025)	Phosphorus 2
Monroe	Mill Creek/Blue Pond Outlet and tribs (0402-0049)	Phosphorus
Monroe	Minor Tribs to Irondequoit Bay (0302-0038)	Phosphorus
Monroe	Rochester Embayment - East (0302-0002) [9]	Phosphorus
Monroe	Rochester Embayment - West (0301-0068) 9	Phosphorus
Monroe	Shipbuilders Creek and tribs (0302-0026)	Phosphorus 2
Monroe	Thomas Creek/White Brook and tribs (0302-0023)	Phosphorus

Nassau	Bannister Creek/Bay (1701-0380)	Nitrogen
Nassau	Beaver Lake (1702-0152)	Phosphorus
Nassau	Browswere Bay (1701-0383)	Nitrogen
Nassau	Camaans Pond (1701-0052)	Phosphorus
Nassau	East Meadow Brook, Upper, and tribs (1701-0211)	Silt/Sediment
Nassau	East Rockaway Channel (1701-0381)	Nitrogen
Nassau	Glen Cove Creek, Lower, and tribs (1702-0146)	Silt/Sediment
Nassau	Grant Park Pond (1701-0054)	Phosphorus
Nassau	Hempstead Bay, Broad Channel (1701-0032)	Nitrogen
Nassau	Hempstead Lake (1701-0015)	Phosphorus
Nassau	Hewlett Bay (1701-0382)	Nitrogen
Nassau	Hog Island Channel (1701-0220)	Nitrogen
Nassau	Massapequa Creek, Upper, and tribs (1701-0174)	Phosphorus
Nassau	Milburn/Parsonage Creeks, Upp, and tribs (1701-0212)	Phosphorus
Nassau	Reynolds Channel, East (1701-0215) [12]	Nitrogen
Nassau	Reynolds Channel, West (1701-0216) 12	Nitrogen
Nassau	Tidal Tribs to Hempstead Bay (1701-0218)	Nitrogen
Nassau	Tribs (fresh) to East Bay (1701-0204)	Silt/Sediment
Nassau	Tribs (fresh) to East Bay (1701-0204)	Phosphorus
Nassau	Tribs to Smith Pond/Halls Pond (1701-0221)	Phosphorus
Nassau	Woodmere Channel (1701-0219)	Nitrogen
New York	Harlem Meer (1702-0103)	Phosphorus
New York	The Lake in Central Park (1702-0105)	Phosphorus
Niagara	Bergholtz Creek and tribs (0101-0004)	Phosphorus
Niagara	Hyde Park Lake (0101-0030)	Phosphorus
Niagara	Lake Ontario Shoreline, Western (0301-0053) 9	Phosphorus
Niagara	Lake Ontario Shoreline, Western (0301-0072) 9	Phosphorus
Oneida	Ballou, Nail Creeks (1201-0203)	Phosphorus
Onondaga	Ley Creek and tribs (0702-0001) 10	Nutrients (phosphorus)
Onondaga	Minor Tribs to Onondaga Lake (0702-0022) 10	Nutrients (phosphorus)
Onondaga	Minor Tribs to Onondaga Lake (0702-0022) 10	Nitrogen (NH3, NO2)
Onondaga	Onondaga Creek, Lower (0702-0023) 10	Nutrients (phosphorus)
Onondaga	Onondaga Creek, Lower, and tribs (0702-0023)	Turbidity
Onondaga	Onondaga Creek, Middle, and tribs (0702-0004)	Turbidity
Onondaga	Onondaga Creek, Upper, and tribs (0702-0024)	Turbidity
Ontario	Great Brook and minor tribs (0704-0034)	Phosphorus 2
Ontario	Great Brook and minor tribs (0704-0034)	Silt/Sediment

Ontario	Hemlock Lake Outlet and minor tribs (0402-0013)	Phosphorus
Ontario	Honeoye Lake (0402-0032)	Phosphorus
Orange	Brown Pond Reservoir (1303-0013)	Phosphorus
Orange	Lake Washington (1303-0012)	Phosphorus
Orange	Minor Tribs to Middle Wallkill (1306-0061)	Phosphorus
Orange	Monhagen Brook and tribs (1306-0074)	Phosphorus
Orange	Orange Lake (1301-0008) [16]	Phosphorus
Orange	Quaker Creek and tribs (1306-0025)	Phosphorus
Orange	Wallkill River, Middle, Main Stem (1306-0038)	Phosphorus
Orange	Wallkill River, Upper, and Minor tribs (1306-0017)	Phosphorus
Orleans	Glenvwood Lake (0301-0041)	Phosphorus
Orleans	Lake Ontario Shoreline, Western (0301-0070) 9	Phosphorus
Orleans	Lake Ontario Shoreline, Western (0301-0071) 9	Phosphorus
Oswego	Lake Neatahwanta (0701-0018)	Nutrients (phosphorus)
Oswego	Pleasant Lake (0703-0047)	Phosphorus
Putnam	Lost Lake, Putnam Lake (1302-0053)	Phosphorus
Putnam	Minor Tribs to Croton Falls Reservoir (1302-0001)	Phosphorus
Queens	Bergen Basin (1701-0009) 18	Nitrogen
Queens	Jamaica Bay, Eastern, and tribs, Queens (1701-0005) 18	Nitrogen
Queens	Kissena Lake (1702-0258)	Phosphorus
Queens	Meadow Lake (1702-0030)	Phosphorus
Queens	Shellbank Basin (1701-0001) 18	Nitrogen
Queens	Willow Lake (1702-0031)	Phosphorus
Rensselaer	Nassau Lake (1310-0001)	Phosphorus
Rensselaer	Snyders Lake (1301-0043)	Phosphorus
Richmond	Grassmere Lake/Bradys Pond (1701-0357)	Phosphorus
Rockland	Congers Lake, Swartout Lake (1501-0019)	Phosphorus
Rockland	Rockland Lake (1501-0021)	Phosphorus
Saratoga	Ballston Lake (1101-0036)	Phosphorus
Saratoga	Dwaas Kill and tribs (1101-0007)	Phosphorus
Saratoga	Dwaas Kill and tribs (1101-0007)	Silt/Sediment
Saratoga	Lake Lonely (1101-0034)	Phosphorus
Saratoga	Round Lake (1101-0060)	Phosphorus
Saratoga	Tribs to Lake Lonely (1101-0001)	Phosphorus
Schenectady	Collins Lake (1201-0077)	Phosphorus
Schenectady	Duane Lake (1311-0006)	Phosphorus
Schenectady Lake	Mariaville Lake (1201-0113)	Phosphorus
Schuyler	Cayuta Lake (0603-0005)	Phosphorus

Seneca	Reeder Creek and tribs (0705-0074)	Phosphorus
St.Lawrence	Black Lake Outlet, Black Lake (0906-0001)	Phosphorus
St.Lawrence	Fish Creek and minor tribs (0906-0026)	Phosphorus
Steuben	Smith Pond (0502-0012)	Phosphorus
Suffolk	Agawam Lake (1701-0117)	Phosphorus
Suffolk	Big/Little Fresh Ponds (1701-0125)	Phosphorus
Suffolk	Canaan Lake (1701-0018)	Phosphorus
Suffolk	Canaan Lake (1701-0018)	Silt/Sediment
Suffolk	Fresh Pond (1701-0241)	Phosphorus
Suffolk	Great South Bay, East (1701-0039)	Nitrogen
Suffolk	Great South Bay, Middle (1701-0040)	Nitrogen
Suffolk	Great South Bay, West (1701-0173)	Nitrogen
Suffolk	Lake Ronkonkoma (1701-0020)	Phosphorus
Suffolk	Mattituck/Marratooka Pond (1701-0129)	Phosphorus
Suffolk	Mill and Seven Ponds (1701-0113)	Phosphorus
Suffolk	Millers Pond (1702-0013)	Phosphorus
Suffolk	Moriches Bay, East (1701-0305)	Nitrogen
Suffolk	Moriches Bay, West (1701-0038)	Nitrogen
Suffolk	Quantuck Bay (1701-0042)	Nitrogen
Suffolk	Shinnecock Bay and Inlet (1701-0033)	Nitrogen
Suffolk	Tidal Tribs to West Moriches Bay (1701-0312)	Nitrogen
Sullivan	Bodine, Mongomery Lakes (1401-0091)	Phosphorus
Sullivan	Davies Lake (1402-0047)	Phosphorus
Sullivan	Evens Lake (1402-0004)	Phosphorus
Sullivan	Pleasure Lake (1402-0055)	Phosphorus
Sullivan	Swan Lake (1401-0063)	Phosphorus
Tompkins	Cayuga Lake, Southern End (0705-0040)	Phosphorus
Tompkins	Cayuga Lake, Southern End (0705-0040)	Silt/Sediment
Ulster	Ashokan Reservoir (1307-0004)	Silt/Sediment
Ulster	Esopus Creek, Lower, Main Stem (1307-0010) [17]	Turbidity
Ulster	Esopus Creek, Middle, Main Stem (1307-0003) 17	Turbidity
Ulster	Esopus Creek, Upper, and minor tribs (1307-0007)[3]	Silt/Sediment
Ulster	Wallkill River, Lower, Main Stem (1306-0027)	Phosphorus
Warren	Hague Brook and tribs (1006-0006)	Silt/Sediment
Warren	Huddle/Finkle Brooks and tribs (1006-0003)	Silt/Sediment
Warren	Indian Brook and tribs (1006-0002)	Silt/Sediment
Warren	Lake George (1006-0016) and tribs	Silt/Sediment
Warren	Tribs to Lake George, East Shore (1006-0020)	Silt/Sediment
Warren	Tribs to Lake George, Lk.George Village (1006-0008)	Silt/Sediment

Washington	Wood Cr/Champlain Canal and tribs (1005-0036)	Phosphorus
Westchester	Lake Katonah (1302-0136)	Phosphorus
Westchester	Lake Lincolndale (1302-0089)	Phosphorus
Westchester	Lake Meahagh (1301-0053)	Phosphorus
Westchester	Lake Mohegan (1301-0149)	Phosphorus
Westchester	Lake Shenorock (1302-0083)	Phosphorus
Westchester	Mamaroneck River, Lower (1702-0071)	Silt/Sediment
Westchester	Mamaroneck River, Upp, & minor tribs (1702-0123)	Silt/Sediment
Westchester	Saw Mill River (1301-0007)	Phosphorus
Westchester	Saw Mill River, Middle, and tribs (1301-0100)	Phosphorus
Westchester	Sheldrake River (1702-0069)	Phosphorus
Westchester	Sheldrake River (1702-0069)	Silt/Sedimnt
Westchester	Silver Lake (1702-0040)	Phosphorus
Westchester	Teatown Lake (1302-0150)	Phosphorus
Westchester	Truesdale Lake (1302-0054)	Phosphorus
Westchester	Wallace Pond (1301-0140)	Phosphorus

APPENDIX E – List of NYSDEC Regional Offices

Region	Covering the following counties:	DIVISION OF ENVIRONMENTAL PERMITS (DEP) Permit Administrators	DIVISION OF WATER (DOW) Water (SPDES) Program

APPENDIX "B"

NYSDEC FORMS

Construction General Permit (CGP) Electronic Notice of Intent (eNOI) GP-0-25-001

version 1.6

(Submission #: HQC-1J1D-FKRBT, version 1)

Details

Originally Started By	Bohler Engineering
Alternate Identifier	MSV1 - Amazon Distribution Center—Region 3
Submission ID	HQC-1J1D-FKRBT
Status	Draft

Form Input

Eligibility

Disturbance Threshold

1. Will the construction activity involve soil disturbances listed in Part I.A.1 of GP-0-25-001?
Yes

1.a. Will any runoff from the site enter a sewer system classified as a combined sewer?
No

1.b. Is this a remediation project being done under a Department approved work plan (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.) with a SWPPP which meets the substantive requirements of GP-0-25-001?
No

1.c. Is the construction activity related to a stormwater discharge that does not require a permit as described in 40 CFR 122.3(e), e.g. non-point source agriculture or silviculture activities?
No

Other SPDES Permits

2. Will the discharge from the construction activity meet all conditions listed in Part I.A.2 of GP-0-25-001?
Yes

Threatened and Endangered Species

3. Will the construction activity potentially adversely affect a species that is endangered or threatened per Part I.A.3.?
No

State Historic Preservation Act (SHPA)

4. Is the construction activity designated by the Commissioner of the Office of Parks, Recreation and Historic Preservation (OPRHP), pursuant to 9 NYCRR §§428.12 or 428.13 as exempt from the SHPA review (see Attachment 2 of the Letter of Resolution between NYSDEC and OPRHP, dated January 9, 2015)?
No

4.a. Will the construction activity:

a) occur within an archeologically sensitive area indicated on the sensitivity map, or

b) have the potential to affect a property that is listed or determined to be eligible for listing on the National or State Registers of Historic Places, or

c) include a new permanent building on the construction site within the following distances from a building, structure, o object that is more than 50 years old and OPRHP, a Historic Preservation Commission of a Certified Local Government qualified preservation professional has determined is a historically/archeologically significant building, structure, or obje

- 1-5 acres of disturbance—20 feet
- 5-20 acres of disturbance—50 feet
- 20+ acres of disturbance—100 feet?

No

4.b. Is there documentation at the construction site demonstrating:

a) that the construction activity is not within an archeologically sensitive area indicated on the sensitivity map, and that construction activity is not immediately adjacent to a property listed or determined to be eligible for listing on the Nation State Registers of Historic Places, and

b) that there is no new permanent building to be built on the construction site within the following distances from a build structure, or object that is more than 50 years old, or if there is such a new permanent building on the construction site within those parameters that OPRHP, a Historic Preservation Commission of a Certified Local Government, or a qualifie preservation professional has determined that the building, structure, or object more than 50 years old is not historically/archeologically significant:

- 1-5 acres of disturbance – 20 feet
- 5-20 acres of disturbance – 50 feet
- 20+ acres of disturbance – 100 feet?

Yes

State Environmental Quality Review (SEQR)

---

5. Is the construction activity subject to SEQR (Part I.A.5.), or the equivalent environmental review from another NYS or federal agency (Part I.A.6.)?
Yes

5.a. Has the owner/operator obtained documentation that the project review pursuant to SEQR, or the equivalent, has been satisfied per Part I.A.5. or I.A.6. of GP-0-25-001?
Yes

Uniform Procedures Act (UPA) Permits

---

6. Has the owner/operator obtained all necessary UPA permits from NYSDEC, or the equivalent from another NYS or federal agency per Part I.A.7.a. of GP-0-25-001?
Yes

Steep Slope

---

7. Is the construction activity within the watershed of surface waters of the State classified as AA or AA-S identified utilizing the Stormwater Interactive Map on NYSDEC's website?
No

Owner/Operator Information

8. Owner/Operator Name
BMG Albany, LLC

9. Owner/Operator Contact Person Information

First and Last Name	Phone	E-mail
Sean Baggett	(781) 974-3628	sbaggett@bluewaterpg.com

10. Owner/Operator Mailing Address

One Tower Bridge, 100 Front Street, Suite 1225
West Conshohocken, PA 19428
USA

11. Is the billing contact different from the Owner/Operator Contact?
No

12. What type of organization is the owner/operator?
LLC

12.b. Is the owner/operator registered with the Department of State to do business in New York State?
Yes

12.b.i. Department of State ID #
NONE PROVIDED

The Department of State ID can be found using the following link:
Department of State | Division of Corporations

Project Details

16. This eNOI submission is for:
A construction activity not part of a common plan of development or sale in accordance with Part I.D.1.a.

17. Does the project type fall under Table 1 or Table 2 of Appendix B of GP-0-25-001? If any portion of the construction activity falls under Table 2, regardless of the size of the disturbance, select "Table 2".
Table 2

18. Consistent with Part III.B.1.c.i. of GP-0-25-001, provide a concise overview of the project. Describe existing and proposed conditions, and include any other relevant information.
The applicant, BMG Albany, LLC, is proposing to develop a 137.2-acre property located at Route 5S / Mead Road, in the Town/of Florida, Montgomery County, New York. The project will include construction of ±652,000 SF building (ground floor building footprint) along with associated parking, access drives, stormwater management, landscaping, and utilities. The project site is primarily undeveloped with portions of asphalt associated with existing access drives to the site off Route 5S. Majority ground cover consists of Green areas with moderate to steep topography. Refer to the project SWPPP for additional information.

Enter the total project site acreage, the acreage to be disturbed, and the future impervious area (acreage) within the disturbed area, rounded to the nearest tenth of an acre.

19. Total Site Area (acres)
137.2

20. Total Area to be Disturbed (acres)
66.0

21. Existing Impervious Area to be Disturbed (acres)
1.1

22. Future Impervious Area Within Disturbed Area (acres)
45.1

Nature of the project:
Redevelopment with increase in impervious area

23. Do you plan to disturb more than 5 acres of soil at any one time?
No

---

24. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)
0

B (%)
10

C (%)
40

D (%)
50

25. Enter the planned start and end dates of the disturbance activities.

Start Date
10/01/2025

End Date
10/01/2027

26. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
South Chuctanunda Creek

27. Type of waterbody identified in question 26?
Stream/Creek On Site

28. Has the surface waterbody in question 26 been identified as a 303(d) segment in Appendix D of GP-0-25-001?
No

29. Is this project located in one of the Watersheds identified in Appendix C of GP-0-25-001?
No

30. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
No

31. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
Yes

31.a. What is the name of the municipality/entity that owns the separate storm sewer system? If the separate sewer system is owned by an MS4 Operator, enter the MS4 Operator name.
Town of Florida

32. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

33. Is this property owned by a state authority, state agency, federal government or local government?
No

Required SWPPP Components

General SWPPP Requirements

34. Has a SWPPP been developed in conformance with the requirements in Part III. of GP-0-25-001?
Yes

35. Does the SWPPP demonstrate consideration of the future physical risks due to climate change pursuant to the CRRA, 6 NYCRR Part 490, and associated guidance per Part III.A.2. of GP-0-25-001?
Yes

36. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?
Yes

37. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the NYS Stormwater Management Design Manual?
Yes

37.a. Which version of the NYS Stormwater Management Design Manual was used to develop the SWPPP?
2024

SWPPP Preparer

39. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:
Professional Engineer (P.E.)

40. Name of the person who prepared the SWPPP
Vishal Rai

41. SWPPP Preparer Organization Name
Bohler Engineering

42. SWPPP Preparer Contact Information

First and Last Name	Phone	E-mail
Vishal Rai	518-438-9900	vrai@bohlereng.com

43. SWPPP Preparer Address

17 Computer Dr West
Albany, NY 12205

Download SWPPP Preparer Certification Form

Please take the following steps to prepare and upload your preparer certification form:

1) Click on the link below to download a blank certification form
2) The certified SWPPP preparer should sign this form
3) Upload the completed form
Download SWPPP Preparer Certification Form

44. Please upload the SWPPP Preparer Certification
NONE PROVIDED
Comment
NONE PROVIDED

44.a. Has the SWPPP Preparer Certification Form been signed by the SWPPP preparer in accordance with Part VII.J of GP-0-25-001?
No

All forms submitted with the eNOI must be signed in accordance with Part VII.J. per Part I.D.2.b. of GP-0-25-001.

Erosion & Sediment Control Criteria

45. Has a construction sequence schedule for the planned management practices been prepared?
Yes

Post-Construction Criteria

Site Planning and Soil Restoration

46. Identify all site planning practices that were used to prepare the final site plan/layout for the project.
Preservation of Undisturbed Area
Preservation of Buffers
Reduction of Clearing and Grading
Locating Development in Less Sensitive Areas
Sidewalk Reduction
Driveway Reduction
Building Footprint Reduction
Parking Reduction

47. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6 ("Soil Restoration") of the Design Manual.
All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

Water Quality Criteria

49. Water Quality Sizing Criteria

Total WQv required (acre-feet)	Total RRv provided (acre-feet)	Minimum RRv (acre-feet)	Total WQv provided (acre-feet)	Sum of RRv and WQv provided
4.88	0.99	0.98	4.14	5.13

Water Quantity Criteria

50. Per Section 9.2.1.C.VI and VII of the 2024 Design Manual, is there 0% change to hydrology that increases the discharge rate and volume from the project site?
Yes

Operation and Maintenance

53. Has a long-term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?
Yes

53.a. Identify the entity responsible for the long-term Operation and Maintenance.
BMG Albany, LLC

Post-Construction SMP Identification

54. Post-Construction RR Techniques and Standard SMPs

RR Techniques and SMPs	Contributing Impervious Area (acres)	Total Contributing Area (acres)
Filtration Bioretention (F-5)	10.300	
Micropool Extended Detention Pond (P-1)	10.510	

55. Alternative SMPs

Type of Alternative SMP	Manufacturer of the Alternative SMP	Name of the Alternative SMP	Contributing Impervious Area (acres)

NONE PROVIDED

61.a. Has the Owner/Operator Certification Form from Appendix J been signed by the owner/operator, or a representative of the owner/operator in accordance with Part VII.J of GP-0-25-001 and uploaded to the eNOI?
NONE PROVIDED

Additional Project Information

62. Enter any additional pertinent project information in the text box below.
The project is located in an area with Pyritic Shale bedrock which expands when exposed to the atmosphere. As such, per geotechnical recommendations, infiltration and related stormwater management facilities are not appropriate for the site. Given the ground conditions, a minimum RRv (assuming HSG D) is provided utilizing stormwater management techniques that do not require infiltration.

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity

Please indicate your permit identification number: NYR ___ ___ ___ ___ ___ ___

I. Owner or Operator Information

1. Owner/Operator Name:

2. Street Address:

3. City/State/Zip:

4. Contact Person: | 4a.Telephone:

4b. Contact Person E-Mail:

II. Project Site Information

5. Project/Site Name:

6. Street Address:

7. City/Zip:

8. County:

III. Reason for Termination

9a. □ All disturbed areas have achieved final stabilization in accordance with the general permit and SWPPP. ***Date final stabilization completed** (month/year): _____

9b. □ Permit coverage has been transferred to new owner/operator. Indicate new owner/operator's permit identification number: NYR ___ ___ ___ ___ ___ ___
(Note: Permit coverage can not be terminated by owner identified in I.1. above until new owner/operator obtains coverage under the general permit)

9c. □ Other (Explain on Page 2)

IV. Final Site Information:

10a. Did this construction activity require the development of a SWPPP that includes post-construction stormwater management practices? □ yes □ no (If no, go to question 10f.)

10b. Have all post-construction stormwater management practices included in the final SWPPP been constructed? □ yes □ no (If no, explain on Page 2)

10c. Identify the entity responsible for long-term operation and maintenance of practice(s)?

_____

NOTICE OF TERMINATION for Storm Water Discharges Authorized under the SPDES General Permit for Construction Activity - continued

10d. Has the entity responsible for long-term operation and maintenance been given a copy of the operation and maintenance plan required by the general permit? □ yes □ no

10e. Indicate the method used to ensure long-term operation and maintenance of the post-construction stormwater management practice(s):

□ Post-construction stormwater management practice(s) and any right-of-way(s) needed to maintain practice(s) have been deeded to the municipality.

□ Executed maintenance agreement is in place with the municipality that will maintain the post-construction stormwater management practice(s).

□ For post-construction stormwater management practices that are privately owned, a mechanism is in place that requires operation and maintenance of the practice(s) in accordance with the operation and maintenance plan, such as a deed covenant in the owner or operator's deed of record.

□ For post-construction stormwater management practices that are owned by a public or private institution (e.g. school, university or hospital), government agency or authority, or public utility; policy and procedures are in place that ensures operation and maintenance of the practice(s) in accordance with the operation and maintenance plan.

10f. Provide the total area of impervious surface (i.e. roof, pavement, concrete, gravel, etc.) constructed within the disturbance area? _____ (acres)

11. Is this project subject to the requirements of a regulated, traditional land use control MS4? □ yes □ no

(If Yes, complete section VI - "MS4 Acceptance" statement

V. Additional Information/Explanation:

(Use this section to answer questions 9c. and 10b., if applicable)

VI. MS4 Acceptance - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative (Note: Not required when 9b. is checked -transfer of coverage)

I have determined that it is acceptable for the owner or operator of the construction project identified in question 5 to submit the Notice of Termination at this time.

APPENDIX "F"

O&M DOCUMENTS

2.7. Bioretention

Areas of Bioretention

Key areas to inspect for Bioretention include the following:

- BR 1. Drainage Area
- BR 2. Inlets
- BR 3. Bioretention Ponding Area
- BR 4. Vegetation
- BR 5. Outlets

Note: The category of Bioretention includes:

- Bioretention cells – areas of soil, mulch, and vegetation that treat runoff
- Dry swales – long, linear bioretention cells, sometimes with check dams along a mildly sloping swale
- Rain gardens – usually small-scale bioretention practices on residential or small commercial properties

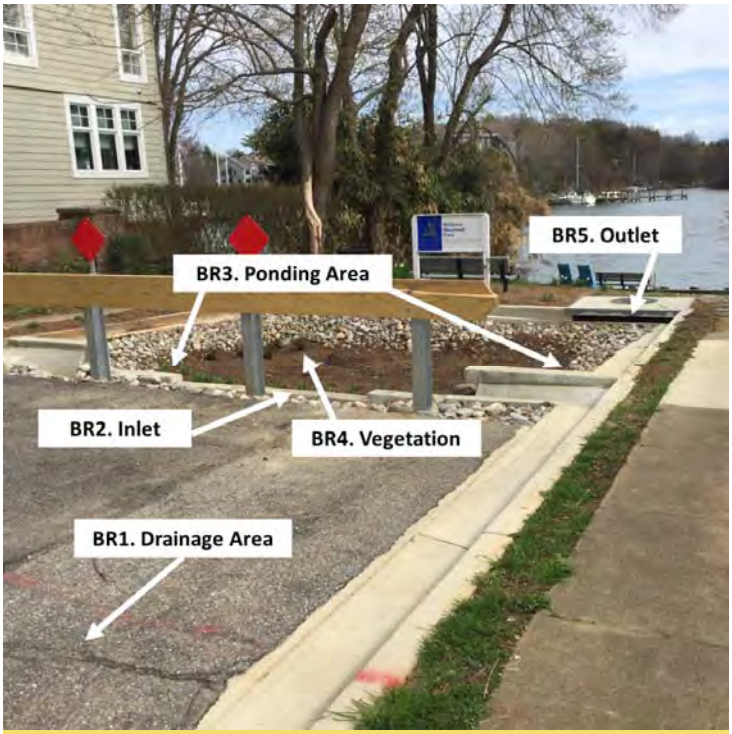

Figure 2.7.1. Key Areas for Level 1 Inspection of Bioretention

- Stormwater planters – usually in more urban settings, with soil and plants in a concrete box that receives roof runoff or perhaps other water from the site
- Tree pits – also a more urban practice where the bioretention is confined within some sort of box (e.g., concrete) and places along road curbs or other areas to treat runoff

For the purposes of this chapter, the term “Bioretention cell” will be used to generally describe these practices.

Bioretention Level 1 Inspection

The Level 1 Inspection focuses on the Drainage Area (BR1), Inlets (BR2), Bioretention Ponding Area (BR3), Vegetation (BR4), and Outlets (BR5). This inspection should be conducted on a regular basis, with an early spring inspection to ensure that the practice has survived the winter, particularly if there has been a significant amount of snow. An inspection during the growing season or in the early fall is also recommended to check on the health of vegetation.

BR 1. Drainage Area

Description: The drainage area sends runoff to and is uphill from the Bioretention cell. When it rains, water runs off and flows to the Bioretention cell and ponds within the cell temporarily (usually for no more than 48 hours). Sometimes, the runoff will contain dirt, grit, grass clippings, oil, or other substances that SHOULD NOT be directed to the Bioretention area.

Instruction: Look for areas that are uphill from the Bioretention cell. Consult **Table 2.7.1** below.

Table 2.7.1 BR Drainage Area

Problem (Check if Present)		Follow-Up Actions
	☐ Bare soil, erosion of the ground (rills washing out the dirt)	☐ Seed and mulch areas of bare soil to establish vegetation. ☐ Fill in erosion areas with soil, compact, and seed and straw to establish vegetation. ☐ If a rill or small channel is forming, try to redirect water flowing to this area by creating a small berm or adding topsoil to areas that are heavily compacted. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Large areas of soil have been eroded, or larger channels are forming. May require rerouting of flow paths.
	☐ Piles of grass clippings, mulch, dirt, salt, or other materials	☐ Remove or cover piles of grass clippings, mulch, dirt, etc. ☐ Other:
	☐ Open containers of oil, grease, paint, or other substances	☐ Cover or properly dispose of materials; consult your local solid waste authority for guidance on materials that may be toxic or hazardous. ☐ Other:

BR 2. Inlets

Description: The inlets to a Bioretention cell are where water flows into the cell. Depending on the design, water can flow in through:

- Curb cuts or openings in a parking lot or roadway
- Pipes or ditches that carry water into the Bioretention cell from the drainage area
- Flow directly over the land surface (known as “sheetflow”), sometimes across a strip of rock or stone

Figure 2.7.2 Bioretention Cell Inlets

CSN, 2013

Instruction: Stand in the Bioretention cell itself and look for all the places where water flows in. Often there will be multiple points of inflow to the practice. Consult **Table 2.7.2** below for possible problems.

Table 2.7.2 BR Inlets

Problem (Check if Present)	Follow-Up Actions
 ☐ Inlets collect grit and debris or grass/weeds. Some water may not be getting into the Bioretention cell. The objective is to have a clear pathway for water to flow into the cell.	☐ Use a flat shovel to remove grit and debris (especially at curb inlets or openings). Parking lots generate fine grit that will accumulate at these spots. ☐ Pull out clumps of growing grass or weeds and scoop out the soil or grit that the plants are growing in. ☐ Remove any grass clippings, leaves, sticks, and other debris that is collecting at inlets. ☐ For pipes and ditches, remove sediment and debris that is partially blocking the pipe or ditch opening where it enters the Bioretention cell. ☐ Dispose of all material properly where it will not re-enter the Bioretention cell. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Inlets are blocked to the extent that most of the water does not seem to be entering the Bioretention cell.
 ☐ Some or all of the inlets are eroding so that rills, gullies, and other erosion is present, or there is bare dirt that is washing into the Bioretention cell.	☐ For small areas of erosion, smooth out the eroded part and apply rock or stone (e.g., river cobble) to prevent further erosion. Usually, filter fabric is placed under the rock or stone. ☐ In some cases, reseeding and applying erosion-control matting can be used to prevent further erosion. Some of these materials may be available at a garden center, but it may be best to consult a landscape contractor. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Erosion is occurring at most of the inlets, and it looks like there is too much water that is concentrating at these points. The inlet design may have to be modified.

BR 3. Bioretention Ponding Area

Description: The ponding area fills up with water during a rainstorm. If you picture the Bioretention cell as a bathtub, there is the *bottom* (usually flat surface), *side slopes* (areas that slope down to the bottom from the surrounding ground), and *berms or structures that control the depth to which water ponds.*

Instruction: Examine the entire Bioretention surface and side slopes. Consult the table below for possible problems.

Table 2.7.3 BR Ponding Area

Problem (Check if Present)	Follow-Up Actions
 ☐ Mulch (if used) needs to be replaced or replenished. The mulch layer had decomposed or is less than 1-inch thick.	☐ Add new mulch to a total depth (including any existing mulch that is left) of 2 to 3 inches. The mulch should be shredded hardwood mulch that is less likely to float away during rainstorms. ☐ Avoid adding too much mulch so that inlets are obstructed or certain areas become higher than the rest of the Bioretention surface. ☐ Other:
 ☐ Minor areas of sediment, grit, trash, or other debris are accumulating on the bottom.	☐ Use a shovel to scoop out minor areas of sediment or grit, especially in the spring after winter sanding materials may wash in and accumulate. Dispose of the material where it cannot re-enter the Bioretention cell. ☐ If removing the material creates a hole or low area, fill with soil mix that matches original mix and cover with mulch so that the Bioretention surface area is as flat as possible. ☐ Remove trash, vegetative debris, and other undesirable materials. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Sediment has accumulated more than 2-inches deep and covers 25% or more of the Bioretention surface. ☐ Kick-Out to Level 2 Inspection: The Bioretention cell is too densely vegetated to assess sediment accumulation or ponding; see BR-4, Vegetation.

 ☐ There is erosion in the bottom or on the side slopes. Water seems to be carving out rills as it flows across the Bioretention surface or on the slopes, or sinkholes are forming in certain areas. ☐ Source: Stormwater Maintenance, LLC.	☐ Try filling the eroded areas with clean topsoil or sand, and cover with mulch. ☐ If the problem recurs, you may have to use stone (e.g., river cobble) to fill in problem areas. ☐ If the erosion is on a side slope, fill with clay that can be compacted and seed and mulch the area. ☐ Other: ☐ Kick-Out to Level 2 Inspection: The problem persists or the erosion is more than 3-inches deep and seems to be an issue with how water enters and moves through the Bioretention cell. ☐ Kick-Out to Level 2 Inspection: The problem does not seem to be caused by flowing water, but a collapse or sinking of the surface (e.g., “sinkhole”) due to some underground problem.
 ☐ The bottom of the Bioretention cell is not flat, and the water pools at one end, along an edge, or in certain pockets. The whole bottom is not uniformly covered with water. See design plan to verify that Bioretention surface is intended to be flat. Check during or immediately after a rainstorm.	☐ If the problem is minor (just small, isolated areas are not covered with water), try raking the surface OR adding mulch to low spots to create a more level surface. You may need to remove and replace plantings in order to properly even off the surface. ☐ Check the surface with a string and bubble level to get the surface as flat as possible. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Ponding water is isolated to less than half of the Bioretention surface area, and there seem to be elevation differences of more than a couple of inches across the surface.
 ☐ Water stands on the surface more than 72 hours after a rainstorm and /or wetland-type vegetation is present. The Bioretention cell does not appear to be draining properly.	☐ Kick-Out to Level 2 Inspection: This is generally a serious problem, and it will be necessary to activate a Level 2 Inspection.

BR 4. Vegetation

Description: The health of vegetation within the Bioretention cell is perhaps the most critical maintenance item for the property owner or responsible party. Many Bioretention cells become overgrown, and "desirable" vegetation becomes choked out by weeds and invasive plants. It is important to know what the Bioretention cell is supposed to look like and what plants seem to be thriving or doing poorly. Periodic maintenance of vegetation will prevent larger problems that are more difficult and costly to manage.

Instruction: Examine all Bioretention cell vegetation. Consult the table below for possible problems.

Table 2.7.4 BR Vegetation

Problem (Check if Present)	Follow-Up Actions
 ☐ Vegetation requires regular maintenance—pulling weeds, removing dead and diseased plants, replacing mulch around plants, adding plants to fill in areas that are not well vegetated, etc.	☐ If you can identify which plants are weeds or not intended to be part of the planting plan, eliminate these, preferably by hand pulling. ☐ If weeds are widespread, check with the local stormwater authority and/or Extension Office about proper use of herbicides for areas connected with the flow of water. ☐ Even vegetation that is intended to be present can become large, overgrown, and/or crowd out surrounding plants. Prune and thin accordingly. ☐ If weeds or invasive plants have overtaken the whole Bioretention cell, bush-hog the entire area before seedheads form in the spring. It will be necessary to remove the root mat manually or with appropriate herbicides, as noted above. ☐ Re-plant with species that are aesthetically pleasing and seem to be doing well in the Bioretention cell. ☐ Other: ☐ Kick-Out to Level 2 Inspection: You are unsure of the original planting design, or the vegetation maintenance task is beyond your capabilities of time, expertise, or resources. If you are unsure of the health of the vegetation (e.g. salt damage, invasives, which plants are undesirable) or the appropriate season to conduct vegetation management, consult a landscape professional before undertaking any cutting, pruning, mowing, or brush hogging.
 ☐ Vegetation is too thin, is not healthy, and there are many spots that are not well vegetated.	☐ The original plants are likely not suited for the actual conditions within the Bioretention cell. If you are knowledgeable about plants, select and plant more appropriate vegetation (preferably native plants) so that almost the entire surface area will be covered by the end of the second growing season. ☐ Other: ☐ Kick-Out to Level 2 Inspection: For all but small practices (e.g., rain gardens), this task will likely require a landscape design professional or horticulturalist.

BR 5. Outlets

Description: Outlets are where water leaves the Bioretention cell when there is too much ponded water. There are various ways that outlets are configured. They can be a yard drain type of structure in the Bioretention cell itself or a rock weir where water flows during large storms. Many Bioretention practices have an underdrain, which is like a French drain, that helps the Bioretention cell drain properly after storms. The underdrain pipe may “daylight” (come to the ground surface) at some point downhill from the Bioretention cell.

Instruction: Examine outlets that release water out of the Bioretention cell. Consult the table below for possible problems.

Table 2.7.5 BR Outlets

Problem (Check if Present)	Follow-Up Actions
☐ Erosion at outlet	☐ Add stone to reduce the impact from the water flowing out of the outlet pipe or weir during storms. ☐ Other:
	☐ Kick-Out to Level 2 Inspection: Rills have formed and erosion problem becomes more severe.
 ☐ Outlet obstructed with mulch, sediment, debris, trash, etc.	☐ Remove the debris and dispose of it where it cannot re-enter the Bioretention cell. ☐ Other:
	☐ Kick-Out to Level 2 Inspection: Outlet is completely clogged or obstructed; there is too much material to remove by hand or with simple hand tools.

2.8. Green Roof

Areas of the Green Roof

Key areas to inspect for green roofs include the following:

GR 1. Vegetation and Surface
GR 2. Overflows and Drains

Note: Green Roofs consist of green infrastructure practices applied on rooftops, wherein stormwater is filtered through a vegetated planting bed. Green Roofs are a unique practice in that they are often covered by a professional ongoing maintenance contract, and their design is highly variable depending on the specific product. This section highlights some key inspection items.

Figure 2.8.1. Key Areas for Level 1 Inspection of Green Roof

2.10. Ponds and Wetlands

Areas of Ponds and Wetlands

Key areas to inspect for ponds and wetlands include the following:

- PO 1. Drainage area
- PO 2. Inlet pipes and swales
- PO 3. Pond area and embankments
- PO 4. Pond outlet

Note: This category includes the following practices:

- *Wet ponds* – have a permanent pool of water and may be divided into various "cells"
- *Stormwater wetlands* – have a variety of depth zones ranging from deep pools to shallow wetlands and are characterized by wetland vegetation

It is recommended strongly to have as-built drawings and copies of previous inspections at hand, if available. Aerial photos may be needed to help direct the inspector to the pond or wetland location if it is obscured by vegetation.

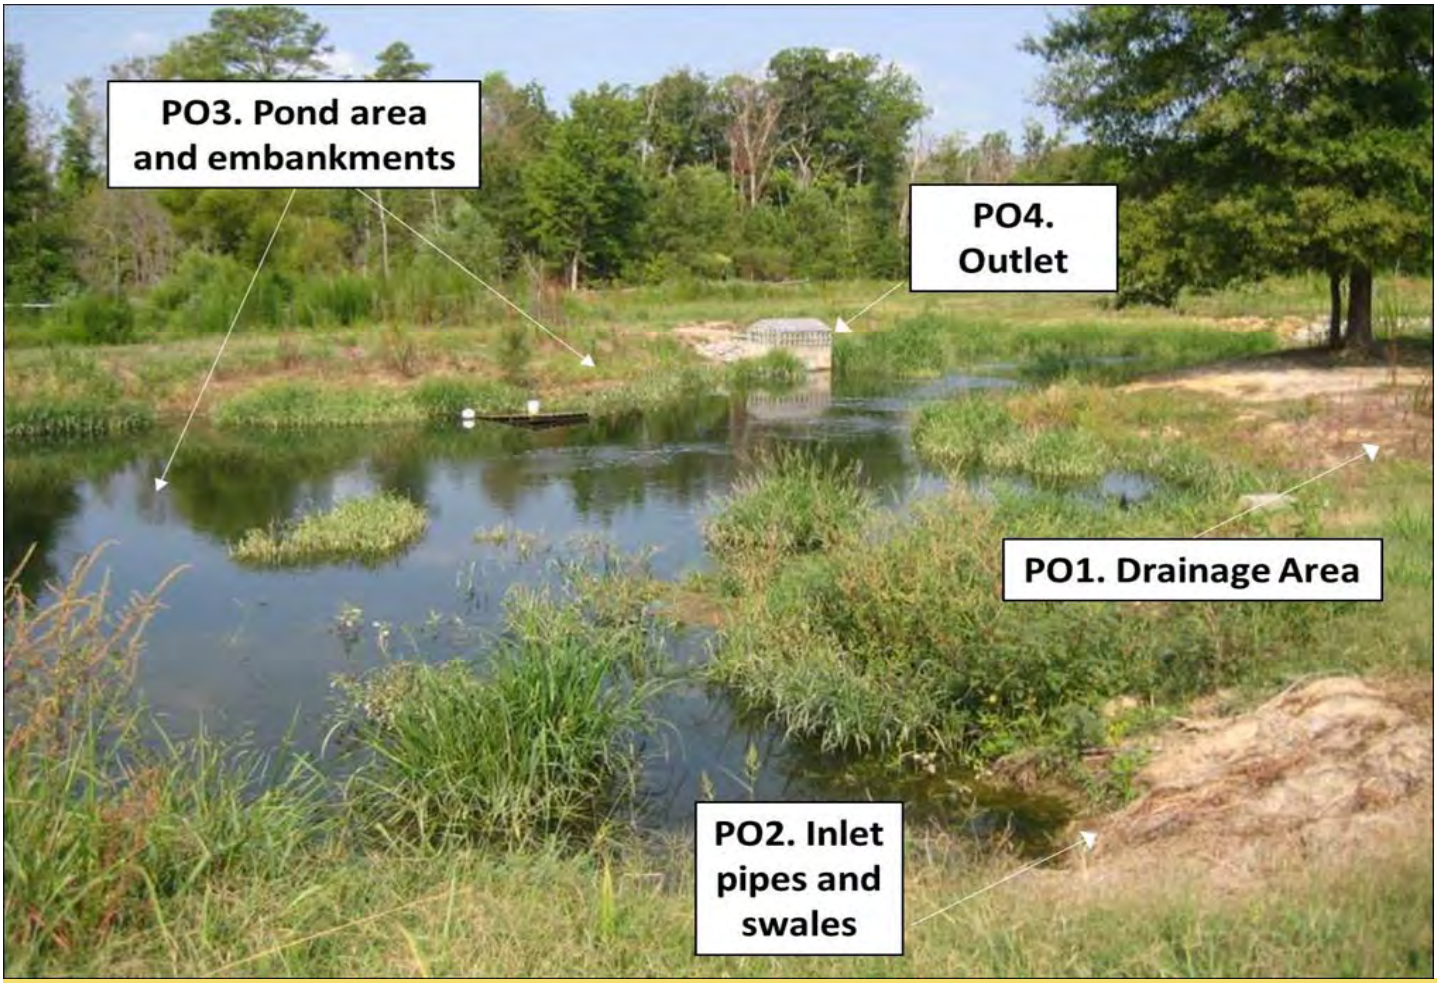

Figure 2.10.1. Key Areas for Level 1 Inspection of a Pond/Wetland

Pond and Wetland Level 1 Inspection

The Level 1 Inspection focuses on the drainage area (PW 1), inlet pipes or swales (PW 2), pond area and embankments (PW 3) and pond outlet structures and outfall (PW 4). This inspection should be conducted on a regular basis to ensure that a buildup of trash, vegetation, or sediment does not interfere with the pre-treatment, pond or wetland, and the outfall's normal flow or function. Pond embankments and dams should be regularly inspected for evidence of erosion, burrowing or tunneling animals, and large woody vegetation growing on the dam.

PW 1. Drainage Area

Description: The drainage area conveys runoff to and is uphill from the pond inlet. When it rains, water runs off through roof drains, yard drains, parking lots, roadways and underdrains to the ponds. Flow is through underground piping systems, overland via swales, or across the ground as sheetflow. Sometimes, the runoff will contain dirt, grit, grass clippings, leaves and woody debris that can collect in the drainage system. If left alone, blockages can occur and increase the chance of shallow flooding or standing water. Standing water in drainage systems foster mosquitos, pipe corrosion, and possible nuisance and odor conditions.

Instruction: Look for areas that are uphill from the pond. Consult **Table 2.10.1** below:

Table 2.10.1 PW Drainage Area

Problem (Check if Present)	Follow-Up Actions
☐ Bare soil, erosion of the ground (rills washing out the dirt)	☐ Seed and straw areas of bare soil to establish vegetation. ☐ Fill in eroded areas with soil, compact, seed and mulch with straw to establish vegetation. ☐ Other: ☐ Kick-Out to Level 2 Inspection: If a rill or small channel is forming, try to redirect water flowing to this area by creating a small berm or adding topsoil to areas that are heavily compacted. ☐ If large areas of soil have been eroded or larger channels are forming, this may require rerouting of flow paths or use of an erosion-control seed mat or blanket to reestablish acceptable ground cover or anchor sod where it is practical.
 ☐ Piles of grass clippings, mulch, dirt, salt, or other materials	☐ Remove or cover piles of grass clippings, mulch, dirt, etc. ☐ Remove excessive vegetation or woody debris that can block drainage systems. ☐ Other:
 ☐ Open containers of oil, grease, paint, or other substances exposed to rain in the drainage area	☐ Cover or properly dispose of materials; consult your local solid waste authority for guidance on materials that may be toxic or hazardous. ☐ Other:

PW 2. Pond Inlets

Description: Free, unobstructed flow from the drainage area to stormwater ponds is necessary to prevent shallow flooding and even structural damage from flooding. Pond inlets can consist of pipes, ditches, swales, or other means to convey stormwater to the pond or wetland.

Instruction: Look for all areas where water flows into the pond during storms. Note that there may be multiple points of inflow and types of structures (e.g., pipes, open ditches, etc.). Consult **Table 2.10.2** below:

Table 2.10.2 Pond Inlets

Problem (Check if Present)		Follow-Up Actions
 	☐ Inlets are buried, covered or filled with silt, debris, or trash, or blocked by excessive vegetation.	☐ If the problem can be remedied with hand tools and done in a safe manner, remove vegetation, trash, woody debris, etc. from blocking inlet structures. ☐ Other: ☐ Kick-Out to Level 2 or 3 Inspection: If the amount of material is too large to handle OR there are ANY safety concerns about working in standing water, soft sediment, etc., the work will likely have to be performed by a qualified contractor.
	☐ Inlets are broken, and, with pieces of pipe or concrete falling into the pond, there is erosion around the inlet, there is open space under the pipe, or there is erosion where the inlet meets the pond	☐ Kick-Out to Level 2 Inspection: These types of structural or erosion problems are more serious and will require a qualified contractor to repair.

PW 3. Pond Area and Embankments

Description: The pond area and embankment can consist of the following elements:

- Pre-treatment cell or small holding area where water first flows into the pond from the various inlets. These are commonly referred to as “forebays” and will be demarcated from the main pond area by small dams made of earth or rock. The purpose of forebays is to capture some of the sediment and pollutants before they reach the deep pool, making maintenance easier over time. Not all ponds will have forebays.
- The pond surface can be open water or a combination of open water and areas with wetland vegetation. Sometimes there is a shallow bench around the perimeter of a pond, known as an “aquatic bench.”
- The “side slopes” are areas around the perimeter of the pond where the surrounding land slopes down to the pond surface.
- Most ponds will have a “riser structure,” where the water exits a pond during storms. This can be a concrete or metal pipe that is open at the top, often with some type of trash rack. Some ponds also have an “emergency spillway,” which is an open, rock-lined channel that carries water from large storms safely across the embankment.
- The dam or embankment holds water in the pond and is constructed of compacted soil, such as clay. There is often a pipe through the embankment that carries water from the riser structure safely through the embankment to the downstream channel.

The pond’s pre-treatment areas or forebays should not be choked with vegetation or full of sediment. Removal of excessive vegetation and sediment and selective replanting are often annual maintenance activities.

Likewise, the pond’s deep pool should not to be choked with vegetation or filled with sediment. Vegetation and sediment bars can restrict flow and cause short circuiting that reduces capture of sediment. Pond volume is to be maintained at the original design capacity and free of sediment bars or debris piles. Sometimes ponds are over-maintained and have no vegetation. Algae and turbidity (muddy water) are common problems in many ponds.

Instruction: Examine both interior and exterior pond banks as well as the pond body. Observe from the inlet pipes to the outfall structure and emergency overflow.

Table 2.10.3 PW Pond Area and Embankments

Problem (Check if Present)		Follow-Up Actions
	☐ The pretreatment area(s) or forebay(s) are filled with sediment, trash, vegetation, or other debris.	☐ If the problem can be remedied with hand tools and done in a safe manner, use a flat shovel or other equipment to remove small amounts of sediment. ☐ Remove trash and excessive vegetation from forebays if this can be done in a safe manner. ☐ Other:
		☐ Kick-Out to Level 2 Inspection: Large amounts of sediment or debris will have to be removed by a qualified contractor. ANY condition that poses a safety concern for working in standing water or soft sediments should be referred to a Level 2 Inspection or qualified contractor.

Table 2.10.3 PW Pond Area and Embankments

Problem (Check if Present)		Follow-Up Actions
	☐ The pond area itself has accumulated sediment, trash, debris, or excessive vegetation that is choking the flow of the water, OR the pond area is covered with algae or aquatic plants.	☐ Level 1 includes handling only small amounts of material that can be removed by hand, or with rakes or other hand tools. Do not attempt any repair that poses a safety issue. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Most cases will call for a Level 2 Inspection and/or a qualified contractor. ☐ You are not sure what type and amount of vegetation is supposed to be in the pond. ☐ The algae or aquatic plants should be identified so that proper control techniques can be applied.
	☐ The side slopes of the pond are unstable, eroding, and have areas of bare dirt.	☐ If there are only minor areas, try filling in small rills or gullies with topsoil, compacting, and seeding and mulching all bare dirt areas with an appropriate seed. Alternatively, try using herbaceous plugs to get vegetation established in tricky areas, such as steep slopes. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Erosion and many bare dirt areas on steep side slopes will require a Level 2 Inspection and repair by a qualified contractor.
 	☐ The riser structure is clogged with trash, debris, sediment, vegetation, etc., OR is open, unlocked, or has a steep drop and poses a safety concern. The pond level may have dropped below its “normal” level.	☐ If you can safely access the riser on foot or with a small boat, clear minor amounts of debris and remove it from the pond area for safe disposal. ☐ Other: ☐ Kick-Out to Level 2 Inspection: The riser cannot be accessed safely, the amount of debris is substantial, or the riser seems to be completely clogged and the water level has risen too high. ☐ There are safety issues with the riser and concern about access to pipes, drops, or any other life safety concern. ☐ The riser is leaning, broken, settling or slumping, corroded, eroded or any other structural problem.

Table 2.10.3 PW Pond Area and Embankments		
Problem (Check if Present)		**Follow-Up Actions**
	☐ The dam/embankment is slumping, sinking, settling, eroding, or has medium or large trees growing on it.	☐ If there are small isolated areas, try to fix them by adding clean material (clay and topsoil) and seeding and mulching. ☐ Periodically mow embankments to enable inspection of the banks and to minimize establishment of woody vegetation. ☐ Remove any woody vegetation that has already established on embankments. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Most of these situations will require a Level 2 Inspection or evaluation and repair by a qualified contractor. Seepage through the dam or problems with the pipe through the dam can be a serious issue that should be addressed to avoid possible dam failure.
	☐ The emergency spillway or outfall (if it exists) has ☐ erosion, settlement, or loss of material. Rock-lined spillways have excessive debris or vegetation.	☐ Clear light debris and vegetation. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Displacement of rock lining, excessive vegetation and erosion/settlement may warrant review and decision by Level 2 Inspector to check against original plan. ☐ Any uncertainty about the integrity of the emergency spillway should be referred to a Level 2 Inspector. ☐ Erosion or settlement such that design has been compromised should be reviewed by an engineer.

PW 4. Pond Outlet

Description: The pond's outlet enables the ponded water to discharge to downstream drainage systems or stream channels. The outlet is often at the base of the dam/embankment on the downstream side. Inspection of this point can help prevent flooding of the pond and upstream drainage systems and prevent pond failure at a weak point of a pond's containment system.

Instruction: Examine the outlet of the pipe on the downstream side of the dam/embankment where it empties into a stream, channel, or drainage system. Consult the table below for possible problems.

Table 2.10.4 PW Pond Outlet

Problem (Check if Present)	Follow-Up Actions
 ☐ The pond outlet is clogged with sediment, trash, debris, vegetation, or is eroding, caving in, slumping, or falling apart.	☐ If there is a minor blockage, remove the debris or vegetation to allow free flow of water. ☐ Remove any accumulated trash at the outlet. ☐ Outlet: ☐ Kick-Out to Level 2 Inspection: ☐ If the area at the outlet cannot be easily accessed or if the blockage is substantial, a Level 2 Inspection is warranted. ☐ Erosion at and downstream of the outfall should be evaluated by a qualified professional. ☐ Any structural problems, such as broken pipes, structures falling into the stream, or holes or tunnels around the outfall pipe, should be evaluated by a Level 2 Inspector and will require repair by a qualified contractor. ☐ The pool of water at the outlet pipe is discolored, has an odor, or has excessive algae or vegetative growth.

2.11. Infiltration

Areas of Infiltration

Key areas to inspect for Infiltration include the following:

- IN 1. Drainage Area
- IN 2. Inlets
- IN 3. Infiltration Area
- IN 4. Outlets

Figure 2.11.1 Key Areas for Level 1 Inspection of Infiltration Practice

Note: The category of Infiltration includes:

- Infiltration Trench – Long, narrow infiltration practice, usually with small gravel at the surface and a reservoir of larger gravel or stone beneath
- Infiltration Basin – Larger practice, usually covered with grass and highly permeable soil beneath
- Dry Well – Small pit filled with stone or gravel, or precast concrete chamber surrounded by stone that receives and stores runoff to enable it to infiltrate into the underlying ground.

IN 4. Outlets

Description: Outlets are where water exits the surface of the infiltration area during larger storms when the underground infiltration reservoir fills up and the excess water needs somewhere to go. Note that not all infiltration practices will have an identifiable outlet if the design is for all the water to infiltrate into the ground. Outlets may be a berm, stone weir, or pipe.

Instruction: Locate and inspect all outlets. Consult **Table 2.11.4** below for possible problems.

Table 2.11.4 IN Outlets

Problem (Check if Present)	Follow-Up Actions
 ☐ Outlet obstructed with sediment, debris, trash, etc.	☐ Remove the debris and dispose of it where it cannot re-enter the infiltration area. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Outlet is completely obstructed; there is too much material to remove by hand or with simple hand tools.
☐ Rills or gullies are forming at outlet.	☐ For minor rills, fill in with soil, compact, and seed and straw to establish vegetation. ☐ Other: ☐ Kick-Out to Level 2 Inspection: Rills are more than 2" to 3" deep and require more than just hand raking and re-seeding.

3.10. Ponds & Wetlands – Level 2 Inspections and Triggers for Level 3

The most likely triggers for a Level 3 Inspection for Ponds and Wetlands are:

- Severe erosion
- Excessive algae or aquatic plants
- Settlement and pipe corrosion
- Major sediment buildup

Table 3.10.1 Level Inspection: PONDS and WETLANDS

Recommended Repairs and Required Skills	Triggers for Level 3 Inspection
Observed Condition: Bare Soil or Erosion in the Drainage Area	
Condition 1: Extensive problem spots, but no channels or rills forming Reseed problem areas. If problem persists or grass does not take, consider hiring a landscape contractor. Condition 2: Problem is extensive, and rills/channels are beginning to form May be necessary to divert or redirect water that is causing the erosion problem. If it appears that simple regrading—such as installing a berm or leveling a low spot–will fix the problem, make repairs and ensure that the problem is repaired after the next storm.	• Large rills or gullies are forming in the drainage area. • An attempt to regrade the drainage area has been unsuccessful. • Fixing the problem would require major regrading (i.e., redirecting more than a 100-square-foot area. • It is not clear why the problem is occurring.
Observed Condition: Manholes or Inlet Pipe Buried or Covered with Vegetation	
Condition 1: Nearest manhole and inlet pipe not found Consult as-built drawings to get to closest suspected location and use metal detector to search for metal manhole cover. If unsuccessful, identify nearest drain inlets and approximate pipe direction to locate next manhole. Condition 2: Manhole located and inspected Never enter a manhole, except by following confined-space entry protocols. If outlet pipe is not visible or greater than 25% full of sediment/debris or trash, it will typically require a qualified contractor to flush, clean and clear blockages. Condition 3: Inlet pipe not found at pond Clear vegetation and brush that may be covering the inlet pipe. Buried inlet pipes may be found through use of a metal probe. Condition 4: Inlet pipe buried in sediment or blocked by vegetation Once located, the pipe path can be cleared of vegetation with brush hook or other brush tools. Light digging may clear sediment from the end of the pipe.	• To locate buried manholes and lost storm lines, it is sometimes necessary to hire a pipeline inspection contractor with televising equipment or ground-penetrating radar and enter at the closest upstream access point. • Locating a buried inlet pipe may require wading in the edge of the pond and using a metal probe and brush axe to find and expose the pipe. • If other than light digging is necessary to remove accumulated sediment, a contractor with heavy equipment may be required.

Table 3.10.1 Level Inspection: PONDS and WETLANDS	
Recommended Repairs and Required Skills	**Triggers for Level 3 Inspection**
Observed Condition: Pipe or Headwall Settlement, Erosion, Corrosion or Failure	
Condition 1: Pipe or headwall settlement or failure Severe sinkholes, settlement or corrosion should be kicked out to Level 3 Inspection. Condition 2: Flow not confined to pipe and visible outside pipe wall With flashlight, observe the inside of the pipe and note its condition. Take photographs. Look for sinkholes developing that indicate pipe failure beneath the surface. Kick out to Level 3 inspection.	• Where blockages are visible, a decision is needed on whether to clear them or leave in place. If a third of the pipe is full of sediment, it should be removed by a contractor with pipe-cleaning equipment. • Corrosion of inlet pipes that allows flow around the pipe exterior is a structural concern because it can lead to settlement, sinkholes and undermining pond embankment. Evidence of this type of failure may require specialized pipe-inspection equipment and investigation by an engineer.
Observed Condition: Pond Conditions	
Condition 1: Pond pre-treatment zone is full of sediment or not constructed as shown on as-built drawings. Condition 2: Excessive buildup of sediment or overgrowth If the pre-treatment area or pond pool is overgrown or filled with sediment so that the original design is compromised, corrective measures are required. If plants have died, then replanting is necessary. If none of the original design exists due to alteration or sediment, kick out to Level 3 inspection.	• It may require inspection by an engineer to determine next steps for clearing, replanting or reconstruction. • Erosion or settlement such that design has been compromised should be reviewed by an engineer. Recurring erosion may require redesign and/or regrading to direct flow away from eroding area. • If sediment has filled more than 50% of the pond's capacity, dredging is likely needed and should be evaluated by a qualified contractor. • Removal or control of excessive algae or aquatic plants can be assessed by a qualified pond maintenance company.

5.2. Inspection and Maintenance Checklists and Documentation

The checklists included in this chapter are specific to the maintenance hierarchy. The maintenance plan should include inspection checklists for all three hierarchies. In addition, these checklists should be modified to identify the specific practice elements included in each design. The materials developed as a part of the maintenance plan should be provided to the practice owner and local government. (See **Table 5.2**)

Table 5.2. Customizing Checklists and Guidance

Hierarchy	Checklist/Checklist Guidance	Tips for Customizing
Level 1	**Section 2** includes both the checklists and guidance.	Add photographs of the practice (once installed), and include a simple aerial photograph of the site to locate the practice. Include key local government contacts and contractors along with the checklist.
Level 2	**Section 3** includes guidance on how to respond to the Level 1 Inspection and/or activate a Level 3 investigation. **Appendix B** includes routine inspection checklists for the Level 2 Inspector.	Modify to remove elements that are not in this particular practice.
Level 3	Guidance is included in **Sections 3 and 4**.	Typically, this will not need to be modified.

5.3. Budgeting for Maintenance

A maintenance plan should include a budget for annual maintenance. In the Public Maintenance model, a single entity (the local government) will be responsible for maintenance of many practices, so the cost of maintenance for an individual practice may not be as important as estimating the average cost of maintenance across all practices. For privately maintained practices, on the other hand, it is very helpful to develop a cost estimate that is as accurate as possible for the specific location. As a result, two options for estimating costs are presented here, including:

- **Option 1**: Average or Unit Costs
  Generalized cost data are used to estimate an annual cost. This option may be used for a municipality or other institution that manages a large number of practices.
- **Option 2:** Detailed Individual Practice Budget
  Annual costs are estimated using more detailed practice information, as well as more detailed estimates of labor and materials costs.

Option 1: Average or Unit Costs

In this option, annual maintenance costs are estimated on a per-acre basis or based on a percentage of the construction costs. These prices typically range from about 1% to 4% of the construction costs (King and Hagan, 2011; **Table 5.3**).

Table 5.3 Typical Maintenance Costs (Source: King and Hagan, 2011; Adjusted to 2015 Costs)

Practice	Annual Maintenance Cost (% of Construction)	Annual Maintenance Cost ($/cubic foot of the water quality volume–WQV—treated)
Buffers	4%	$0.25-$0.35
Tree Planting	4%	$0.35
Ponds and Wetlands	4%	$0.22-$0.35
Infiltration Trench/ Basin	2%	$0.25
Filtering Practices	4%	$0.41-$0.47
Bioretention	4%	$0.44
Swales	3%	$0.18-$0.26
Permeable Pavement	1%	$0.64-$0.89

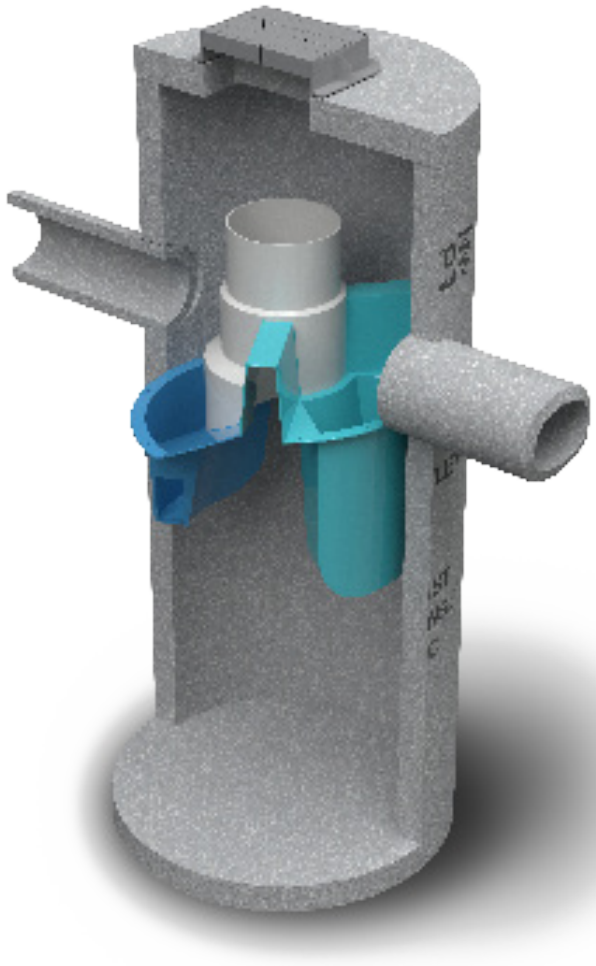
While the costs in **Table 5.3** may be a reasonable starting point, it is important to note that the actual data will vary greatly, depending on labor rates and materials costs. For example, the hourly “Open Shop” labor rate for rough grading is approximately $27/hour in Elmira and $38/hour in New York City (Means, 2015). In addition, costs for labor, materials and equipment will vary depending on the maintenance arrangement (**Table 5.4**).

Table 5.4 Variability in Maintenance Costs Based on Maintenance Arrangement			
Maintenance Arrangement	**Labor**	**Materials**	**Equipment**
Public Maintenance (Municipality)	Level 1: Intern Wage Level 2: Staff Salary Level 3: Professional Staff or Contractor	Low: Materials bought in bulk.	Low: Typically owned by Public Works or similar department.
Private Maintenance (Homeowner)	Level 1: Homeowner (Free) or Contractor Level 2: Private Landscaper or Contractor Level 3: Professional Contractor	High: Materials purchased in small quantities.	High: Specialized equipment needs to be rented if needed.
Private Maintenance (Commercial or HOA)	Level 1: Free (with HOA volunteers) or Contracted Labor Rate Level 2: Private Landscaper or Contractor Level 3: Professional Contractor	Varies: Materials may be bought in bulk or on a small scale, depending on the size of the private entity.	High: Specialized equipment needs to be rented if needed.

Option 2: Site-Based Costs

Because both the unit costs of labor and materials and the average annual costs of maintenance can be so highly variable, more detailed data will be needed to estimate costs at a particular site. One approach for estimating these costs is to generate a list of routine maintenance items, along with associated unit costs for labor, materials and equipment. This approach requires the user to enter basic design data for the practice, as well as information regarding local labor rates and other general costs. In the bioretention example below, unit costs are used to estimate routine maintenance costs, including inspections and regular maintenance.

Example Annual Cost Estimation: Bioretention



An example cost estimation for a bioretention cell follows below. The cost estimation tool used in the Maintenance Chapter will be automated. This example demonstrates how the unit cost and typical frequency data will be used to estimate average annual maintenance costs. In it, we are estimating annual maintenance costs for a bioretention practice with characteristics summarized in **Table 5.5**. **Table 5.6** then summarizes activities, their frequency and extent, and associated labor costs.

Using the assumptions for this practice, the annual costs for routine maintenance would be $1,828 ($1.15/cubic foot of Water Quality Volume) in the first year and $1,468 ($0.90/cf WQv) in subsequent years. This value is much higher than the $0.44/cf estimated using general cost data (**Table 5.3**). However, significant cost savings could be realized by using volunteer or intern-level labor for Level 1 inspections and routine maintenance.

Table 5.5. Assumptions for Bioretention Cost Example

Practice Design		**Unit Costs**	
Water Quality Volume (cf)	1,600	Level 1 Labor ($/hr)	$15
Forebay Volume (cf)	400	Level 2 Labor ($/hr)	$35
Total Practice Area (sf)	2,000	Mulch ($/cy)	$10
Filter Area (sf)	1,000	Plants ($/plant)	$1
Ponding Area (sf)	1,500	Trash Tipping Fee	$25
Slope Area (sf)	500	Seed/Mulch for a small area	$10
Turf Area (sf)	No Turf	Average Cost for a PVC Replacement Part (Planning Level)	$100
Inlets (#)	1

I. First Defense® by Hydro International

Introduction

The First Defense® is an enhanced vortex separator that combines an effective and economical stormwater treatment chamber with an integral peak flow bypass. It efficiently removes total suspended solids (TSS), trash and hydrocarbons from stormwater runoff without washing out previously captured pollutants. The First Defense® is available in several model configurations to accommodate a wide range of pipe sizes, peak flows and depth constraints.

The two product models described in this guide are the First Defense® High Capacity and the First Defense® Optimum; they are inspected and maintained identically.

Operation

The First Defense® operates on simple fluid hydraulics. It is self-activating, has no moving parts, no external power requirement and is fabricated with durable non-corrosive components. No manual procedures are required to operate the unit and maintenance is limited to monitoring accumulations of stored pollutants and periodic clean-outs. The First Defense® has been designed to allow for easy and safe access for inspection, monitoring and clean-out procedures. Neither entry into the unit nor removal of the internal components is necessary for maintenance, thus safety concerns related to confined-space-entry are avoided.

Pollutant Capture and Retention

The internal components of the First Defense® have been designed to optimize pollutant capture. Sediment is captured and retained in the base of the unit, while oil and floatables are stored on the water surface in the inner volume (Fig.1).

The pollutant storage volumes are isolated from the built-in bypass chamber to prevent washout during high-flow storm events. The sump of the First Defense® retains a standing water level between storm events. This ensures a quiescent flow regime at the onset of a storm, preventing resuspension and washout of pollutants captured during previous events.

Accessories such as oil absorbent pads are available for enhanced oil removal and storage. Due to the separation of the oil and floatable storage volume from the outlet, the potential for washout of stored pollutants between clean-outs is minimized.

Applications

- Stormwater treatment at the point of entry into the drainage line
- Sites constrained by space, topography or drainage profiles with limited slope and depth of cover
- Retrofit installations where stormwater treatment is placed on or tied into an existing storm drain line
- Pretreatment for filters, infiltration and storage

Advantages

- Inlet options include surface grate or multiple inlet pipes
- Integral high capacity bypass conveys large peak flows without the need for “offline” arrangements using separate junction manholes
- Long flow path through the device ensures a long residence time within the treatment chamber, enhancing pollutant settling
- Delivered to site pre-assembled and ready for installation

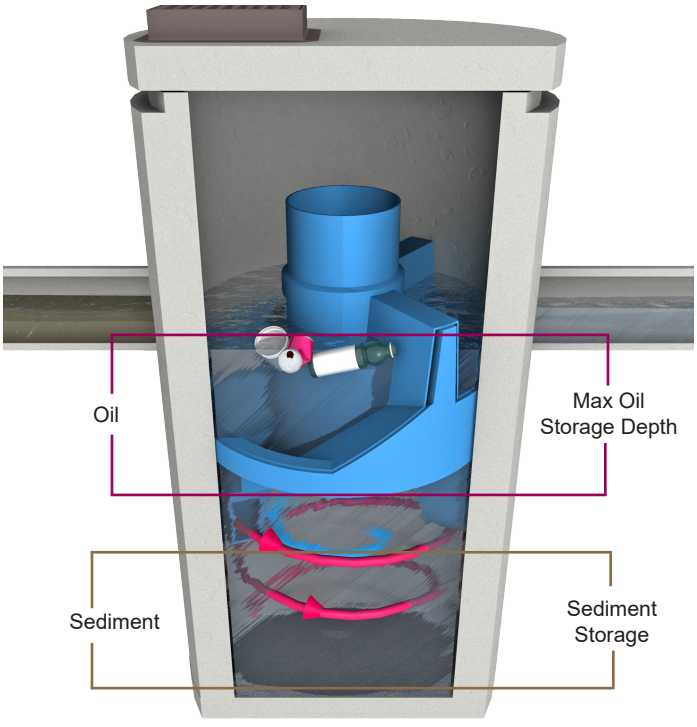

Fig.1 Pollutant storage volumes in the First Defense®.

II. Model Sizes & Configurations

The First Defense® inlet and internal bypass arrangements are available in several model sizes and configurations. The components have modified geometries allowing greater design flexibility to accommodate various site constraints.

All First Defense® models include the internal components that are designed to remove and retain total suspended solids (TSS), gross solids, floatable trash and hydrocarbons (Fig.2). First Defense® model sizes (diameter) are shown in Table 1.

Overview

The First Defense® protects the environment by removing a wide range of pollutants from stormwater runoff. Periodic removal of these captured pollutants is essential to the continuous, long-term functioning of the First Defense®. The First Defense® will capture and retain sediment and oil until the sediment and oil storage volumes are full to capacity. When sediment and oil storage capacities are reached, the First Defense® will no longer be able to store removed sediment and oil.

The First Defense® allows for easy and safe inspection, monitoring and clean-out procedures. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables. Access ports are located in the top of the manhole.

Maintenance events may include Inspection, Oil & Floatables Removal, and Sediment Removal. Maintenance events do not require entry into the First Defense®, nor do they require the internal components of the First Defense® to be removed. In the case of inspection and floatables removal, a vactor truck is not required. However, a vactor truck is required if the maintenance event is to include oil removal and/or sediment removal.

Maintenance Equipment Considerations

The internal components of the First Defense® have a centrally located circular shaft through which the sediment storage sump can be accessed with a sump vac hose. The open diameter of this access shaft is 15 inches in diameter (Fig.3). Therefore, the nozzle fitting of any vactor hose used for maintenance should be less than 15 inches in diameter.

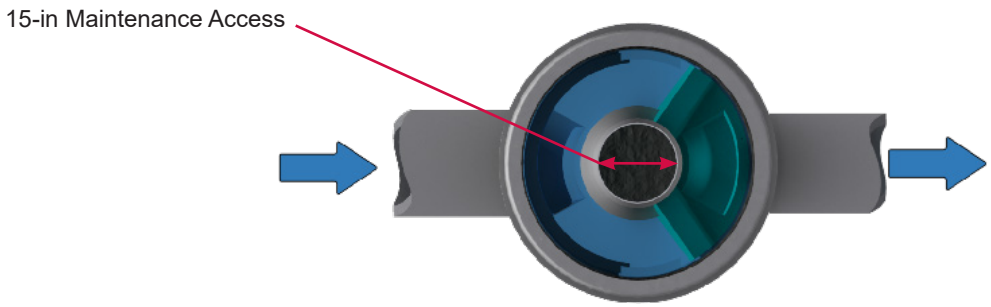

Fig.3 The central opening to the sump of the First Defense®is 15 inches in diameter.

Determining Your Maintenance Schedule

The frequency of clean out is determined in the field after installation. During the first year of operation, the unit should be inspected every six months to determine the rate of sediment and floatables accumulation. A simple probe such as a Sludge-Judge® can be used to determine the level of accumulated solids stored in the sump. This information can be recorded in the maintenance log (see page 9) to establish a routine maintenance schedule.

The vactor procedure, including both sediment and oil / flotables removal, for First Defense® typically takes less than 30 minutes and removes a combined water/oil volume of about 765 gallons.

Inspection Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.

2. Remove the grate or lid to the manhole.

3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities. Fig.4 shows the standing water level that should be observed.

4. Without entering the vessel, use the pole with the skimmer net to remove floatables and loose debris from the components and water surface.

5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel.

6. On the Maintenance Log (see page 9), record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components or blockages.

7. Securely replace the grate or lid.

8. Take down safety equipment.

9. Notify Hydro International of any irregularities noted during inspection.

Floatables and Sediment Clean Out

Floatables clean out is typically done in conjunction with sediment removal. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables (Fig.4).

Floatables and loose debris can also be netted with a skimmer and pole. The access port located at the top of the manhole provides unobstructed access for a vactor hose to be lowered to the base of the sump.

Scheduling

- Floatables and sump clean out are typically conducted once a year during any season.

- Floatables and sump clean out should occur as soon as possible following a spill in the contributing drainage area.

Fig.4 Floatables are removed with a vactor hose

Recommended Equipment

- Safety Equipment (traffic cones, etc)
- Crow bar or other tool to remove grate or lid
- Pole with skimmer or net (if only floatables are being removed)
- Sediment probe (such as a Sludge Judge®)
- Vactor truck (flexible hose recommended)
- First Defense® Maintenance Log

Floatables and Sediment Clean Out Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.

2. Remove the grate or lid to the manhole.

3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities.

4. Remove oil and floatables stored on the surface of the water with the vactor hose or with the skimmer or net

5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel and record it in the Maintenance Log (page 9).

6. Once all floatables have been removed, drop the vactor hose to the base of the sump. Vactor out the sediment and gross debris off the sump floor

7. Retract the vactor hose from the vessel.

8. On the Maintenance Log provided by Hydro International, record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components, blockages, or irregularly high or low water levels.

9. Securely replace the grate or lid.

Maintenance at a Glance

Inspection	- Regularly during first year of installation - Every 6 months after the first year of installation
Oil and Floatables Removal	- Once per year, with sediment removal - Following a spill in the drainage area
Sediment Removal	- Once per year or as needed - Following a spill in the drainage area
NOTE: For most clean outs the entire volume of liquid does not need to be removed from the manhole. Only remove the first few inches of oils and floatables from the water surface to reduce the total volume of liquid removed during a clean out.

Re: USACE
MSV1 – Amazon Warehouse/Distribution Facility
Route 5S, Town of Florida, Montgomery County, NY
25PR01056

Dear Jed Sarabia:

Thank you for requesting the comments of the State Historic Preservation Office (SHPO). We have reviewed the project in accordance with Section 106 of the National Historic Preservation Act of 1966. These comments are those of the SHPO and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project.

Based upon this review, it is the opinion of the New York SHPO that no historic properties, including archaeological and/or historic resources, will be affected by this undertaking.

If further correspondence is required regarding this project, please be sure to refer to the OPRHP Project Review (PR) number noted above. If you have any questions, please contact Josalyn Ferguson at the following email address:

Josalyn.Ferguson@parks.ny.gov

Sincerely,

R. Daniel Mackay

Deputy State Historic Preservation Officer
Division for Historic Preservation

1.0 INTRODUCTION

The Applicant proposes the expansion of existing Amazon Distribution Center building and parking areas located at 2121 Ulster Avenue in the Town of Ulster, Ulster County, New York (*Figure 1*).

The US Fish and Wildlife Service (USFWS) lists the Northern long-eared bat (*Myotis septentrionalis*), tricolored bat (*Perimyotis subflavus*), and Monarch butterfly (*Danaus plexippus*) as federally listed threatened/endangered species or candidate species that may be on the site. The New York State Department of Environmental Conservation (NYSDEC) does not list any threatened/endangered species in this area.

Habitat cover types are listed in Table 1 and described below.

TABLE 1
COVER TYPES IDENTIFIED ON THE SITE

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	< 1	43+/-	+43+/-
• Forested	6 +/-	3	- 3 +/-
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	45 +/-	30	-15 +/-
• Agricultural (includes active orchards, field, greenhouse etc.)	75	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	12 +/-	10.2+/-	-1.8
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: Lawn/landscape areas	0	32+/-	32+/-

Habitat Descriptions

Successional Old Field

This ecological community is defined as meadow habitat dominated by forbes and grasses that occurs on sites that have been cleared and plowed for farming or other development and then abandoned. Shrubs may be present, but collectively they have less than 50% cover in the community. This is a relatively short-lived community that succeeds to a shrubland, woodland, or forest community. This community may provide habitat for a variety of butterflies, birds typically associated with field and shrub communities, and small mammals.

Successional Shrubland

This type of habitat occurs as successional old field habitats advanced in age and growth. Successional shrubland is similar to successional old field with the added development of shrub and

sapling growth which dominates at least half of its aerial extent. The two habitats (i.e., successional old field and successional shrubland) are often found proximal to and interspersed with each other. This habitat is frequented by a number of bird species including gray catbird, brown thrasher eastern towhee, and song sparrow.

Rich Mesophytic Forest

This ecological community is composed of hardwood or mixed forest typically on a mineral rich, fine textured, well-drained soil. The forest canopy may consist of a variety of trees including; red oak (*Quercus rubra*), red maple (*Acer rubrum*), white ash (*Fraxinus americana*), American beech (*Fagus grandifolia*), black cherry (*Prunus serotina*), black birch (*Betula lenta*) and sugar maple (*Acer saccharum*). This forest also has a well-developed shrub layer and species rich herbaceous layer with characteristic species including American hornbeam (*Carpinus caroliniana*), maple-leaf viburnum (*Viburnum acerifolium*), witch hazel (*Hamamelis virginiana*), interrupted fern (*Osmunda claytoniana*), white baneberry (*Actaea pachypoda*), and early meadow rue (*Thalictrum dioicum*). Trees are generally healthy on the site and in the 4-6 inch dbh range.

Successional Northern Hardwood Forest

This forest is a hardwood or mixed forest that occurs on sites that have been cleared or similarly disturbed. Codominant canopy species may include any of the following trees; quaking aspen (*Populus tremuloides*), big-toothed aspen (*P. grandidentata*), balsam poplar (*P. balsamifera),* paper birch (*Betula papyrifera*), gray birch (*Betula populifolia*), pin cherry (*Prunus pensylvanica*), black cherry and white pine (*Pinus strobus*), with lesser amounts of white ash, green ash (*Fraxinus pennsylvanica*), and American elm (*Ulmus americana*). Trees are generally healthy on the site and in the 4-6 inch dbh range.

Cropland Row Crops

This land use/cover type consists of areas that are actively cultivated to produce crops such as corn, potatoes and soybeans or similar crops. This land use and variable cover type can at times offer moderate wildlife habitat, primarily in the form of seasonally available food sources.

Cropland Field Crops

This land use/cover type consists of areas that are actively cultivated to produce crops such as alfalfa, Timothy, oats and wheat and includes areas that are periodically rotated to pasture lands. This land use and variable cover type can at times offer moderate wildlife habitat, in the form of seasonally available food sources and limited cover. Both cropland categories are created and/or maintained by human activities such that exiting soils and vegetation are substantially different than the character of what occurred prior to manipulation by humans. Characteristic birds with varying abundance may include grasshopper sparrow, vesper sparrow, bobolink, and mourning dove.

Shallow Emergent Marsh

Palustrine emergent shallow marsh (PEM) habitats occur in areas with saturated soils and include areas of standing water to a depth of up to approximately three feet for some portion of the year.

These hydrological conditions will vary seasonally and are also dependent on recent climatological conditions and biological factors, including the North American beaver, whose activity levels will vary over time based upon food resource availability. Small areas of water colonized by aquatic plants are included within the deeper portions of this habitat type and provide resources for reptiles, amphibians, fish and aquatic invertebrates.

Dominant herbaceous plant species within this habitat type include common reed (*Phragmites australis*), common cattail (*Typha latifolia*), soft rush (*Juncus effusus*), wool grass (*Scirpus cyperinus*), purple loosestrife (*Lythrum salicaria*), water horehound (*Lycopus americanus*), beggar-ticks (*Bidens frondosa*), smartweeds (*Polygonum spp.*), grass-leaved goldenrod (*Euthamia graminifolia*) and rough-stemmed goldenrod (*Solidago rugosa*). Patches of wetland shrubs and/or small trees such as black willow (*Salix nigra*), silky dogwood (*Cornus amomum*), and Northern arrowwood (*Viburnum dentatum*) are found along the margins and within this habitat type and reflect the wide range of growing conditions present.

Avian species observed in these habitats include wading birds such as green heron and great blue heron, waterfowl such as Canada goose, mallard, green-winged teal, blue-winged teal, pied-billed grebe and other species including osprey, belted kingfisher, Eastern kingbird, red-winged blackbird, swamp sparrow and common grackle. Amphibians and reptiles observed within this habitat include the spring peeper, green frog, Northern leopard frog and painted turtle. Sign of the North American beaver, raccoon, muskrat and white-tailed deer were also previously observed.

Palustrine Shrub Swamp

Palustrine scrub shrub/shrub swamp (PSS) habitats consist of areas dominated by wetland shrub species and saplings of wetland tree species combined with various lianas to form dense thickets. Depending on the hydrologic regime, these areas may also exhibit some lesser components of upland and/or invasive shrub and non-woody species. Areas of PSS are generally dominated by shrubs such as silky dogwood, gray dogwood (*Cornus racemosa*), Northern arrowwood, black willow, honeysuckle (*Lonicera spp.*) and common buckthorn (*Rhamnus cathartica*), and saplings of red maple (*Acer rubrum*), silver maple (*Acer saccharinum*), Eastern cottonwood (*Populus deltoides*), green ash (*Fraxinus pennsylvanica*), black ash (*Fraxinus nigra*) and pin oak (*Quercus palustris*). Common reed and purple loosestrife are locally abundant and may occur with other species such as willow herb (*Epilobium sp.*), sensitive fern (*Onoclea sensibilis*) and moneywort (*Lysimachia nummularia*). Vines such as poison ivy (*Toxicodendron radicans*) and fox grape (*Vitis labrusca*) are also present at varying densities. Depending on landscape position, time of year and recent climatological conditions, standing water may or may not be present. These habitat types are generally adjacent to and interspersed with other habitat types (PFO/PEM) and contribute to the site's overall habitat structural diversity and complexity.

Wildlife utilization of these areas includes avian species commonly found in a variety of habitats, including scrub/shrub thickets and includes the black-capped chickadee, tufted titmouse, Northern cardinal, and blue jay, as well as species more typically associated with wetland habitats such as the red-winged blackbird, common grackle, swamp sparrow, green heron and great blue heron. Amphibians such as the Northern leopard frog, green frog and spring peepers may utilize this habitat type, as well as mammals such as raccoon, muskrat, beaver and white-tailed deer.

Palustrine Forested Wetland

Palustrine forested wetlands (PFO) on the site are dominated by tree species such as red maple, silver maple, Eastern cottonwood, green ash, black ash, willow (Salix Sp.), American sycamore (*Platanus occidentalis*), slippery elm (*Ulmus rubra*) and pin oak. The forest canopy is subtended by an understory consisting of saplings of these tree species as well as shrubs such as silky dogwood, gray dogwood, black willow, Northern arrowwood, honeysuckle and common buckthorn. Overall canopy coverage varies and in forest openings, where sufficient light penetrates to the forest floor, herbaceous plants such as sedges (*Carex spp.*), rushes (*Juncus spp.*) and forbes such as asters (*Aster spp.*), goldenrods (*Solidago spp.*), purple loosestrife, moneywort, willow herb and sensitive fern can be found. Vines such as poison ivy (*Toxicodendron radicans*) and fox grape (*Vitis labrusca*) may also be present at varying densities.

Surface water/hydrology conditions vary and include areas of sustained standing water, perennial and intermittent stream channels, as well as areas which appear to be saturated for prolonged periods, and areas with little or no evidence of standing water. Plant community composition and structure are strongly influenced by these varying hydrological conditions.

Wildlife utilization of this habitat type is largely dependent on and in response to the variability in plant communities and the wide variety of plant species and hydrological conditions results in the presence of a wide range of animal species. Mammals such as North American beaver, white-tailed deer, raccoon, and gray squirrel, amphibians such as the green frog and Northern leopard frog, and avian species such as Baltimore oriole, Northern cardinal, hairy woodpecker, downy woodpecker and other species can be expected to use this habitat type.

Farm Pond/Artificial Pond

These small aquatic habitats are constructed in agricultural or residential areas and typically lack perennially flowing inlets or outlets. Observed biota is limited and may reflect those species which naturally colonized them, as well as those intentionally seeded. Fish such as sunfish (*Lepomis spp.*), yellow perch (*Perca flavescens*) and largemouth bass (*Micropterus salmoides*) are commonly found in these habitats along with painted turtle (*Chrysemys picta*), green frog (*Rana clamitans*) and other common reptiles and amphibians. Mammals such as muskrat (*Ondatra zibethicus*) and beaver are likewise found colonizing these habitats, especially when additional lentic and lotic aquatic habitats are found close by.

Rocky Headwater Stream

The unnamed tributary to Chuctanunda Creek is a small, shallow, perennial stream with moderate to steep gradient. Water flows over eroded bedrock, boulders, cobbles, gravel and sand and alternating sequences of riffles, runs and pools are present. Fish commonly observed in these habitats include dace (*Rhinichthys spp.*), creek chub (*Semotilus atromaculatus*), common shiner (*Luxilus cornutus*), sculpins (*Cottus spp.*), and white sucker (*Catostomus commersonii*). A robust aquatic macroinvertebrate community is also commonly observed in these habitats and includes

species such as caddisfly (*Trichoptera*), stonefly (*Plecoptera*), mayfly (*Ephemoptera*), chironomid midges, and crayfish (*Cambaridae*).

2.0 HABITAT SUITABILITY ASSESSMENT/CONCLUSION

2.1 Northern long-eared bat

Winter Habitat: Northern long-eared bats (NLEB) spend winter hibernating in caves and mines, called hibernacula. They typically use large caves or mines with large passages and entrances; constant temperatures; and high humidity with no air currents. Specific areas where they hibernate have very high humidity, so much so that droplets of water are often seen on their fur. Within hibernacula, surveyors find them in small crevices or cracks, often with only the nose and ears visible.

Summer Habitat: During summer, northern long-eared bats roost singly or in colonies underneath bark, in cavities, or in crevices of both live and dead trees. Males and non-reproductive females may also roost in cooler places, like caves and mines. This bat seems opportunistic in selecting roosts, using tree species based on suitability to retain bark or provide cavities or crevices. It has also been found, rarely, roosting in structures like barns and sheds.

Feeding Habits: Northern long-eared bats emerge at dusk to fly through the understory of forested hillsides and ridges feeding on moths, flies, leafhoppers, caddisflies, and beetles, which they catch while in flight using echolocation. This bat also feeds by gleaning motionless insects from vegetation and water surfaces.

Conclusion - The proposed project requires 3 acres of a total of 6 acres of tree removal for the proposed project. The trees are generally small in the 2-6 inch dbh range and in the impact area do not posses the characteristics associated with roosting or colony habitat. The project sponsor proposes to avoid, minimize, and mitigate other potential impacts by:

- The removal of 3 acres of these trees will not impact this species however to ensure no direct impacts occur all tree removal will occur between November 1 and March 31 when bats are not on the site;
- Implementing soil conservation and dust control best management practices, such as watering dry disturbed soil areas to keep dust down, and using staked, recessed silt fence and anti tracking pads to prevent erosion and sedimentation in surface waters on the site, and;
- Minimizing site lighting by having light fixtures only on the buildings that have tops to direct light downward.

These measures will result in avoiding and minimizing impacts that may affect bats.

2.2 Tricolored bat

During the winter, tricolored bats are found in caves and mines, although in the southern United States, where caves are sparse, tricolored bats are often found roosting in road-associated culverts. During the spring, summer and fall, tricolored bats are found in forested habitats where they roost in trees, primarily among leaves. As its name suggests, the tricolored bat is

distinguished by its unique tricolored fur that appears dark at the base, lighter in the middle and dark at the tip.
White-nose syndrome, a disease that impacts bats, is caused by a fungal pathogen. It has led to 90 to 100% declines in tricolored bat winter colony abundance at sites impacted by the disease. Since white-nose syndrome was first observed in New York in 2006, it has spread rapidly across the majority of the tricolored bat range.

During the spring, summer and fall - collectively referred to as the non-hibernating seasons - tricolored bats primarily roost among live and dead leaf clusters of live or recently dead deciduous hardwood trees. In the southern and northern portions of the range, tricolored bats will also roost in Spanish moss (*Tillandsia usneoides*) and *Usnea trichodea* lichen, respectively. In addition, tricolored bats have been observed roosting during summer among pine needles, within artificial roosts like barns, beneath porch roofs, bridges, concrete bunkers, and rarely within caves. Female tricolored bats exhibit high site fidelity, returning year after year to the same summer roosting locations. Female tricolored bats form maternity colonies and switch roost trees regularly. Males roost singly.

Essential habitat is a dense growth of trees and underbrush covering a large tract.

Conclusion - As with the NLEB - the removal of 3 acres of trees will not impact this species. The project sponsor proposes to avoid, minimize, and mitigate other potential impacts by:

- The removal of 3 acres of these trees will not impact this species however to ensure no direct impacts occur all tree removal will occur between November 1 and March 31 when bats are not on the site;
- Implementing soil conservation and dust control best management practices, such as watering dry disturbed soil areas to keep dust down, and using staked, recessed silt fence and anti tracking pads to prevent erosion and sedimentation in surface waters on the site, and;
- Minimizing site lighting by having light fixtures only on the buildings that have tops to direct light downward.

These measures will result in avoiding and minimizing impacts that may affect bats.

2.3 Monarch butterfly

Monarchs, like all other butterflies and moths, go through egg, larval (caterpillar), chrysalis (pupa), and adult stages. Monarch caterpillars ingest milkweed that contains a toxic compound. The presence of this toxin is used by the monarch butterfly as a defense against predators.

In late August, masses of monarch butterflies begin an epic migration stretching thousands of miles from areas across the United States and as far north as Canada (east of the Rocky Mountains) to overwinter in mountaintops of Central Mexico.

Conclusion – There field habitat or potential habitat for the monarch butterfly but according to IPaC this site does not overlap proposed critical habitat for this species. Impacts are not expected

since large open areas of the site will remain. Milkweed essential to this species although not abundant on the site will remain for use by this species so no mitigation measure is proposed.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

https://www.fws.gov/sites/default/files/documents/endangered-species-consultation-handbook.pdf

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity, intentional or unintentional, resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

The MBTA has no provision for allowing take of migratory birds that may be unintentionally killed or injured by otherwise lawful activities. It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

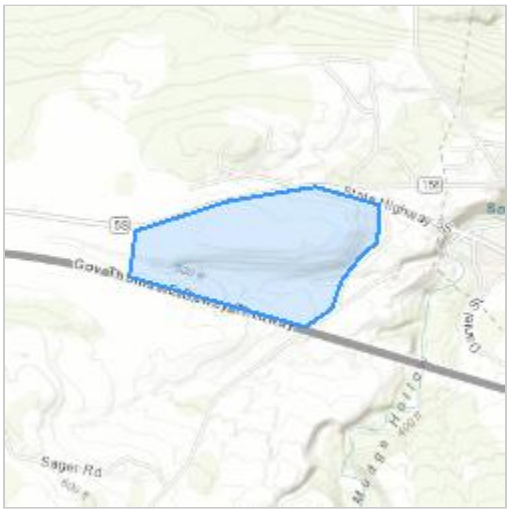
We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

Attachment(s):

- Official Species List

OFFICIAL SPECIES LIST

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".



This species list is provided by:

New York Ecological Services Field Office
3817 Luker Road
Cortland, NY 13045-9385

PROJECT SUMMARY

Project Code: 2025-0053265
Project Name: Amazon Distribution Center
Project Type: Commercial Development
Project Description: Distribution Center
Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@42.9328615,-74.22949892276824,14z

Counties: Montgomery County, New York

ENDANGERED SPECIES ACT SPECIES

There is a total of 3 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Endangered
Tricolored Bat *Perimyotis subflavus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10515	Proposed Endangered

INSECTS

NAME	STATUS
Monarch Butterfly *Danaus plexippus* There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/9743	Proposed Threatened

CRITICAL HABITATS

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

YOU ARE STILL REQUIRED TO DETERMINE IF YOUR PROJECT(S) MAY HAVE EFFECTS ON ALL ABOVE LISTED SPECIES.

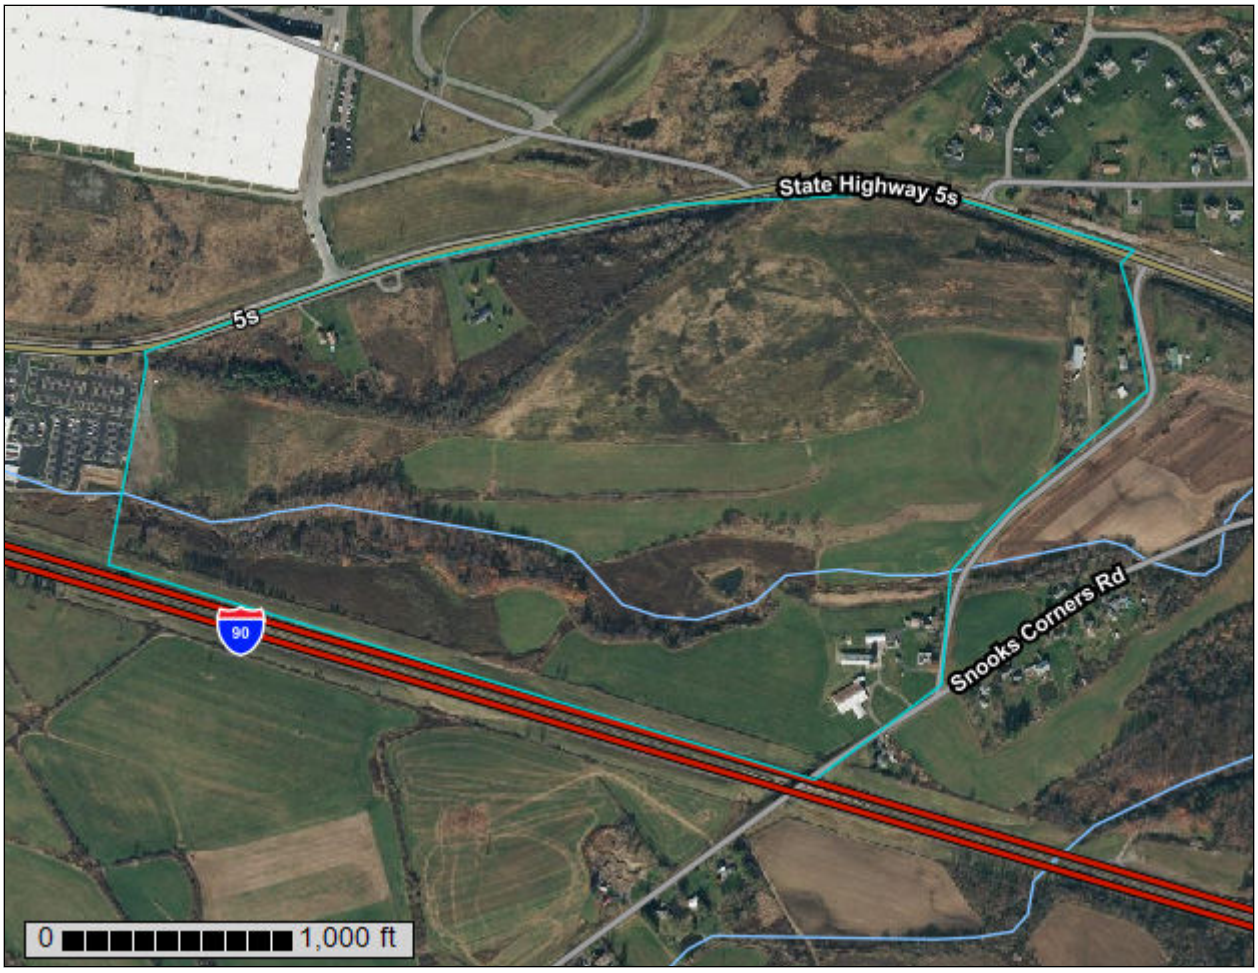
NRCS SOIL SURVEY



United States Department of Agriculture

NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Montgomery County, New York

January 30, 2025

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Montgomery County, New York
Survey Area Data: Version 22, Aug 26, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 4, 2020—Nov 7, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
AnB	Angola silt loam, 3 to 8 percent slopes	7.4	4.2%
ApB	Appleton silt loam, 3 to 8 percent slopes	49.4	28.2%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made

up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Montgomery County, New York

AnB—Angola silt loam, 3 to 8 percent slopes

Map Unit Setting

National map unit symbol: 9tnk
Elevation: 300 to 1,410 feet
Mean annual precipitation: 38 to 44 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 170 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Angola and similar soils: 75 percent
Minor components: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Angola

Setting

Landform: Benches, ridges, till plains
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Loamy till derived mainly from shale and siltstone

Typical profile

H1 - 0 to 9 inches: silt loam
H2 - 9 to 24 inches: silty clay loam
R - 24 to 28 inches: weathered bedrock

Properties and qualities

Slope: 3 to 8 percent
Depth to restrictive feature: 20 to 40 inches to lithic bedrock
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Available water supply, 0 to 60 inches: Low (about 4.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: D
Ecological site: F101XY013NY - Moist Till
Hydric soil rating: No

Minor Components

Ilion

Percent of map unit: 5 percent

Percent of map unit: 5 percent
Landform: Depressions
Hydric soil rating: Yes

ApB—Appleton silt loam, 3 to 8 percent slopes

Map Unit Setting

National map unit symbol: 2w5ht
Elevation: 260 to 1,740 feet
Mean annual precipitation: 31 to 57 inches
Mean annual air temperature: 41 to 50 degrees F
Frost-free period: 100 to 190 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Appleton and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Appleton

Setting

Landform: Drumlins, ridges, till plains
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Calcareous loamy lodgment till derived from limestone, sandstone, and shale

Typical profile

Ap - 0 to 8 inches: silt loam
E - 8 to 16 inches: loam
Bt - 16 to 30 inches: gravelly silt loam
C1 - 30 to 54 inches: gravelly loam
C2 - 54 to 79 inches: gravelly loam

Properties and qualities

Slope: 3 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.01 to 1.42 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 40 percent
Available water supply, 0 to 60 inches: Moderate (about 8.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Ecological site: F101XY013NY - Moist Till

Rhinebeck

Percent of map unit: 5 percent
Hydric soil rating: No

DaB—Darien silt loam, 3 to 8 percent slopes

Map Unit Setting

National map unit symbol: 9tph
Elevation: 300 to 1,250 feet
Mean annual precipitation: 38 to 44 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 170 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Darien and similar soils: 75 percent
Minor components: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Darien

Setting

Landform: Drumlinoid ridges, hills, till plains
Landform position (two-dimensional): Summit, footslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Loamy till derived predominantly from calcareous gray shale

Typical profile

H1 - 0 to 7 inches: silt loam
H2 - 7 to 10 inches: silt loam
H3 - 10 to 31 inches: channery silty clay loam
H4 - 31 to 60 inches: channery silty clay loam

Properties and qualities

Slope: 3 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Available water supply, 0 to 60 inches: Moderate (about 7.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Ecological site: F101XY013NY - Moist Till
Hydric soil rating: No

Minor Components

Rhinebeck

Churchville
Percent of map unit: 5 percent
Hydric soil rating: No

Madalin
Percent of map unit: 5 percent
Landform: Depressions
Hydric soil rating: Yes

LaC—Lansing silt loam, 8 to 15 percent slopes

Map Unit Setting
National map unit symbol: 2w3mh
Elevation: 330 to 2,130 feet
Mean annual precipitation: 31 to 57 inches
Mean annual air temperature: 41 to 50 degrees F
Frost-free period: 100 to 190 days
Farmland classification: Farmland of statewide importance

Map Unit Composition
Lansing and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Lansing

Setting
Landform: Drumlins, hills, till plains
Landform position (two-dimensional): Summit, shoulder, backslope
Landform position (three-dimensional): Side slope, crest
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Calcareous loamy lodgment till derived from limestone, sandstone, and shale

Typical profile

Ap - 0 to 8 inches: silt loam
E - 8 to 13 inches: gravelly silt loam
Bt/E - 13 to 21 inches: gravelly silt loam
Bt1 - 21 to 28 inches: gravelly silt loam
Bt2 - 28 to 39 inches: gravelly silt loam
C - 39 to 79 inches: gravelly loam

Properties and qualities

Slope: 8 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.01 to 1.42 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 40 percent
Available water supply, 0 to 60 inches: Moderate (about 8.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: B
Ecological site: F101XY012NY - Till Upland
Hydric soil rating: No

Minor Components

Conesus

Across-slope shape: Convex
Hydric soil rating: No

Ma—Madalin silty clay loam, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 2spjz
Elevation: 330 to 1,200 feet
Mean annual precipitation: 31 to 57 inches
Mean annual air temperature: 41 to 50 degrees F
Frost-free period: 100 to 190 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Madalin and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Madalin

Setting

Landform: Depressions
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Tread
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Brown clayey glaciolacustrine deposits derived from calcareous shale

Typical profile

Ap - 0 to 7 inches: silty clay loam
Bg - 7 to 9 inches: silty clay loam
Btg1 - 9 to 21 inches: clay
Btg2 - 21 to 30 inches: silty clay
Cg - 30 to 79 inches: stratified silt to clay

Properties and qualities

Slope: 0 to 3 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately high (0.00 to 0.20 in/hr)
Depth to water table: About 0 to 7 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 25 percent
Available water supply, 0 to 60 inches: High (about 9.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4w
Hydrologic Soil Group: C/D
Ecological site: F101XY010NY - Wet Lake Plain Depression
Hydric soil rating: Yes

Minor Components

Rhinebeck

Hydric soil rating: Yes

MmB—Manheim silt loam, 3 to 8 percent slopes

Map Unit Setting

National map unit symbol: 9tqs
Elevation: 500 to 1,800 feet
Mean annual precipitation: 38 to 44 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 170 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Manheim and similar soils: 80 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Manheim

Setting

Landform: Drumlinoid ridges, hills, till plains
Landform position (two-dimensional): Summit, footslope
Landform position (three-dimensional): Base slope
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Loamy till dominated by black or dark gray shale that is neutral or calcareous

Typical profile

H1 - 0 to 9 inches: silt loam
H2 - 9 to 28 inches: gravelly silt loam
H3 - 28 to 50 inches: gravelly silt loam

Properties and qualities

Slope: 3 to 8 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 18 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 1 percent
Available water supply, 0 to 60 inches: Moderate (about 7.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Ecological site: F101XY013NY - Moist Till

PaB—Palatine silt loam, 3 to 8 percent slopes

Map Unit Setting
National map unit symbol: 9trd
Elevation: 600 to 1,800 feet
Mean annual precipitation: 38 to 44 inches
Mean annual air temperature: 45 to 48 degrees F
Frost-free period: 110 to 170 days
Farmland classification: All areas are prime farmland

Map Unit Composition
Palatine and similar soils: 75 percent
Minor components: 25 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Palatine

Setting
Landform: Benches, ridges, till plains
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Crest
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Channery loamy till dominated by calcareous dark shale

Typical profile
H1 - 0 to 11 inches: silt loam
H2 - 11 to 18 inches: channery silt loam
H3 - 18 to 28 inches: very channery silt loam
H4 - 28 to 32 inches: unweathered bedrock

Properties and qualities

Slope: 3 to 8 percent
Depth to restrictive feature: 20 to 40 inches to lithic bedrock
Drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 15 percent
Available water supply, 0 to 60 inches: Low (about 3.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Re: Preliminary Geotechnical Engineering Report
MSV1 – Proposed Amazon ARS Facility
Amsterdam, New York

Dear Josh:

INTRODUCTION

This preliminary geotechnical engineering report (report) was prepared by Sanborn, Head Engineering, P.C. (Sanborn Head) for BMG Albany LLC (BMG Albany, Client) regarding the proposed Amazon ARS Facility (MSV1) located on New York Route 5S (Route 5S) in Amsterdam, New York (Site). The objectives of our work were to assess the subsurface conditions in the proposed development area and provide geotechnical engineering recommendations related to the design of building foundations, the building floor slab-on-grade, site slopes, retaining walls, pavement design, and recommended earthwork procedures for the site work. Where appropriate this report is subject to the limitation in Appendix A.

This report references and expands on subsurface explorations and laboratory testing performed and collected under a previous design concept for WE Acquisitions, LLC, titled *Report of Geotechnical Investigation, Proposed Warehouse, New York State Route 5S*, prepared by Whitestone Associates, Inc. (Whitestone), dated August 26, 2019. Excerpts of the subsurface logs and soil laboratory data are provided in Appendix B and C.

Site Description

The Site, depicted in Figure 1, is approximately 135.3-acre in size is bounded by Route 5S to the north, United States Interstate 90 (I-90, New York State Thruway) to the south, Mead Road to the east, and an existing Amazon facility to the west. The Site primarily consists of undeveloped farmlands with wooded areas located in the north and south, wetlands in the northeast and south, and ponds within the northwestern and southeastern portions of the Site. In addition, existing transmission lines cross the Site from east to west approximately 100 to 400 feet north of the Site's southern boundary, and an existing 50-foot-wide gas utility easement bisects the Site from north to south. The Site The existing conditions within the proposed development area generally consist of sloping farmlands, wooded areas, and wetlands, as well as existing gravel and asphalt driveways.

Based on a review of available historical aerial photographs, the Site was previously occupied by two (2) residential buildings with detached barn and garage structures located along Route 5S. These structures were razed between September 2020 and April 2022. The balance of the Site, except for the wooded areas, appears to have been used for agricultural purposes.

Based on a conceptual site plan entitled *MSV1, Concept Plan A* prepared by Bohler Engineering (Bohler) of Albany, New York, and provided electronically to Sanborn Head on February 25, 2025, the topographic highpoint is located near the center of the Site at approximate elevation (El.) 555 feet. The topography generally slopes down radially to the northeast, east, and south, to a low point located near the northeast corner of the Site at approximate El. 469 feet. In general, the slopes to the north and northwest are more gradual, dropping to a low point along Route 5S of approximate El. 531 feet. In the southwestern portion of the Site, the ground surface rises from an on-Site brook/wetlands, at approximate El. 480 feet, up to the NYS Thruway at approximate El. 520 feet. Elevations discussed herein refer to the North American Vertical Datum of 1988 (NAVD 88

Project Description
According to the plan titled *Preliminary Grading Plan*, prepared by Bohler and provided on March 21, 2025, the proposed development consists of a new, 652,060 square feet multi-story warehouse building associated retaining walls, access roadways, loading dock and transportation staging areas, associated surface parking areas, facility infrastructure features (i.e., substation transformer pad and fire storage tank foundations), and stormwater management features.

Based on the referenced grading plans, the proposed finished floor elevation is 542 feet. It is anticipated that to meet proposed grades, cuts up to approximately 32 feet and fills up to approximately 42 feet will be required. The maximum proposed retaining wall height is approximately 35 feet.

SUBSURFACE EXPLORATION PROGRAM
Recent Subsurface Explorations by Sanborn Head
Between February 10 and 21, 2025, Atlantic Testing Laboratories of Canton, New York advanced 22 test borings (designated SH-1 through SH-22) at the Site. The test borings were advanced using a GeoProbe® drill rig using hollow stem auger techniques to depths ranging from approximately 4.3 feet to 30.5 feet below the ground surface (bgs), or between approximate El. 491.7 and 545.7 feet. Auger and/or split-spoon refusal, likely due to bedrock, was encountered at each test boring location and 10-foot length of NX-size bedrock cores were collected at test borings SH-10 and SH-11.

The test borings were observed and logged by Sanborn Head on a full-time basis. Standard Penetration Tests (SPTs) were performed in general accordance with ASTM D1586 at five-foot intervals to the termination depth. Representative soil samples were obtained by split-barrel sampling procedures, and Sanborn Head personnel visually classified each sample in the field. Soil samples were classified using both the Modified Burmister System and Unified Soil

Classification System and a legend is provided in Appendix B that describes both classification systems. Additional soil characteristics such as density and consistency (based on SPT data), color and moisture were noted on the logs included in Appendix B.1.

Explorations were field located using a Global Navigation Satellite System and are shown on Figure 2. Ground surface elevations were estimated by interpolating between surface elevations obtained from a plan titled *MSV1 Concept Plan A*, prepared by Bohler, as presented on Figure 2 and 3.

Subsurface Explorations by Others

Between January and March 2019, Terracon completed two (2) test boring programs, completing 48 test borings designated B-1 through B-16 and AB-1 through AB-32. Additionally, on June 19, 2019, Whitestone completed a test pit program completing eight (8) test pits designated TP-1 through TP-8 for a prior design concept. Excerpts of previously completed subsurface logs by prepared by others are provided in Appendix B.2 and their as-drilled locations depicted on Figure 2 and 3.

SOIL LABORATORY TESTING

Laboratory Testing by Sanborn Head

Geotechnical laboratory tests were performed by GeoTesting Express, Inc. of Acton, Massachusetts to evaluate the engineering properties of the on-site soils. Five (5) soil samples from test borings across the Site were submitted for grain size distribution (sieve) analysis in accordance with ASTM D6913. Additionally, ten (10) soils samples were submitted to evaluate in-situ moisture content in accordance with ASTM D2216. Additionally, one (1) rock core sample was submitted for Uniaxial Compressive Strength (UCS) strength index testing in accordance with ASTM D7012.

Rock Swelling Potential Testing, including chemical and petrographic analysis, was performed by EXP of Montreal, Quebec, Canada to evaluate the pyrite swelling potential of two (2) core samples collected from SH-10 and SH-11, additionally both samples were submitted for UCS strength index testing.

Please note that natural glacial till soil at the Site may contain a oversized cobbles and boulders, which were not included in soil samples submitted to the laboratory due to sampling/testing procedures. Laboratory test reports should be interpreted accordingly. Due to the timing of this report, only a partial set of geotechnical laboratory test reports were available and are provided in Appendix C. Once testing is complete, a complete set of geotechnical laboratory test reports will be transmitted.

Laboratory Testing by Others

Whitestone completed additional geotechnical laboratory testing during a previous Site concept, including sieve analysis and rock swelling potential testing on bulk samples collected during their previous subsurface exploration program. The results of laboratory testing are provided in Appendix C.2.

SUBSURFACE CONDITIONS

Based on the subsurface exploration data collected by Sanborn Head and data collected by others, the generalized subsurface profile at the Site generally consists of topsoil, underlain by silt and clay deposits and glacial till, overlying weathered and competent bedrock. Fill material was encountered at AB-2 and peat was encountered at SH-8. The following paragraphs provide additional information regarding the subsurface conditions encountered:

Fill material was encountered at AB-2 below an approximately 0.3-foot-thick gravel roadway. The fill material extended to a depth of approximately 2 feet bgs (El. 529 feet) and is described as medium dense clayey sand with gravel with pieces of geotextile fabric observed within the stratum. While not encountered at other exploration locations, it is anticipated that fill material may exist in the vicinity of previously demolished structures and driveways near Route 5S and below existing gravel access roads.

Topsoil was encountered at the surface at each exploration location except B-5, AB-2, and AB-13 and extended to depths ranging from approximately 0.2 feet to 4 feet, or El. 486 feet to El. 555.2 feet. Based on the agricultural history of the Site, it is anticipated that the thickness of topsoil varies significantly across the Site. The topsoil is generally described as soft to very stiff, clayey silt to silt and clay, with varying amounts of sand and gravel and few to very few organic particles. At SH-13, the topsoil encountered is described as medium dense with fine to coarse sand and gravel, trace silt, with few organic particles.

Peat was encountered beneath the topsoil layer at SH-8 to a depth of approximately 9 feet bgs, or El. 496 feet. This deposit is described as very soft peat and organic silt, with trace sand.

Silt and Clay deposits were encountered at the surface at AB-13, and beneath the topsoil layer at B-3, B-6, AB-3, SH-2 through SH-5, SH-7, and SH-9. Where encountered, the silt and clay deposits extend to depths ranging from approximately 2 feet to 9 feet bgs, or El. 495.5 feet to El. 553 feet. The silt and clay deposits are generally described as medium stiff to very stiff, clayey silt to silt and clay, with varying amounts of sand and gravel. Very few to few organics were observed within the silt and clay deposits at exploration locations B-3, B-6, AB-3, and SH-4.

Glacial Till was encountered underlying the upper soil layers at a majority of exploration locations, extending to depths ranging from approximately 2 feet to 22.9 feet bgs, or El. 467 feet to El. 551.5 feet. The glacial till deposits are generally described as very stiff to hard, clayey silt to silt and clay, with varying amounts of sand, gravel, cobbles, and boulders.

Bedrock, or refusal due to probable bedrock, was encountered at depths ranging from approximately 1 foot to 22.9 feet bgs, or El. 465.6 feet to El. 551.6 feet. NX-size bedrock cores were retrieved at SH-10 and SH-11, and a NQ-size bedrock core was retrieved at B-5. The cores are described as medium hard, slightly to severely weathered, gray to dark gray, **Shale**, very close to close horizontal to vertical jointing, slightly to moderately fractured. Based on publicly available geological mapping entitled *Geologic Map of New York; Hudson-Mohawk Sheet,*

1:250,000 authored by L.V. Rickard and D.W. Fisher**,** the shale encountered in our subsurface program is consistent with Utica Shale of the Trenton Group.

The Rock Quality Index of the bedrock cores ranges from 0% to 91%. Laboratory testing indicates that the bedrock has a Swell Potential Petrographic Index of 50 to 67 corresponding to a "medium to high swelling potential," pyrites content ranging from 0.11% to 1.44%, sulphates content ranging from 0.01% to 0.02%, and compressive strength ranging from 34.8 to 147.5 Mpa (e.g., 5 to 21 kips). Loose to very dense weathered bedrock was generally encountered above the competent bedrock and ranges in thickness between approximately 0.1 feet and 8.4 feet.

A contour plan of the estimated elevation of weathered or competent bedrock based on our interpretation of the subsurface data is presented on Figure 3.

Groundwater was encountered at depths ranging from approximately 1 foot to 18.3 feet bgs, or El. 498 feet to El. 550 feet. Mottling (redoximorphic) features were observed at eleven (11) of the previous test boring locations at depths ranging from the ground surface to approximately 6.5 feet bgs. Based on the subsurface conditions encountered, we anticipate that groundwater may be perched at various depths within the glacial till or at the top of the bedrock surface throughout the year.

Where encountered, groundwater measurements were made under the conditions stated on the logs. Due to the fine-grained nature of the Site soil materials, the groundwater levels are generally interpreted as unstabilized. We note that groundwater levels will vary depending on factors such as season, precipitation, construction activity, and other conditions, which may differ from those at the time of our observations.

GEOTECHNICAL ENGINEERING RECOMMENDATIONS

The following presents our geotechnical engineering recommendations related to design of proposed building foundations and the floor slab-on-grade, pavement design, and earthwork procedures for subgrade preparation. Our recommendations are based on the preliminary grading plan prepared by Bohler and provided to Sanborn Head electronically on March 21, 2025.

Engineering Evaluation of Subsurface Conditions

Sanborn Head's engineering evaluation of subsurface conditions and their impact on design and construction is presented below.

- **Pyritic Shale:** The bedrock underlying the Site is known to include pyritic minerals, which when exposed to oxygen undergo a chemical reaction that replaces the pyrite with gypsum. This in turn creates an expanding rock material that continues to expand over long durations (multiple years to decades). Based on the recent Swell Potential laboratory testing results, and consistent with previous test results presented by Whitestone, the on-Site Pyritic Shale is characterized as having a medium to high swelling potential.

Unfortunately, neither the maximum swelling deformation, nor rate of swelling can be determined; therefore, building foundation solutions should consider: (i) reduction of oxygen exposure; and/or (ii) capacity to resist uplift/swelling forces.

Strategies to consider for reducing oxygen exposure to the Pyritic Shale and bedrock subgrade may include, but is not limited to:

- Eliminating crushed shale products;
- Increasing subgrade cover depth;
- Capping the exposed bedrock with a soil or geomembrane barrier;
- Removing bedrock; and/or
- limiting excessive fracturing if blasted.

Based on research by others[1], under laboratory conditions if the Pyritic Shale is allowed to react, significant swelling pressures can develop. The formation of gypsum within the shale partings induced pressures between 4,651 and 13,176 pounds per square foot (psf).

- **Deep Foundation System and Structural Slab:** We recommend that the proposed warehouse, auxiliary buildings, and fire tanks be supported on a drilled deep foundation system consisting of drilled shafts/caissons set into the underlying bedrock. The deep foundation system should be designed to resist the applied compressive, tension, and lateral loads while limiting total and differential post-construction settlements to 1-inch and ½-inch, respectively and that horizontal deflections be limited to ½-inch. The deep foundations should be sized appropriately for the anticipated loading and be spaced a minimum of two diameters center to center.

  Additionally, we recommend that the building slab be constructed as a structural slab, with crawlspace and void form to account for potential heaving, supported on deep foundation elements. At a minimum, the slab design should include a sealed bedrock barrier to limit oxygen reactions within the underlying pyritic shale.

  Deep foundations should be designed in accordance with the 2020 Building Code of New York State (BCNYS). The final design of the deep foundation system should be prepared by a Professional Engineer licensed in the State of New York and reviewed by Sanborn Head on your behalf as the geotechnical engineer of record.

- **Weathered Bedrock and Bedrock Excavation:** Weathered bedrock or bedrock removal is required to achieve proposed subgrades, for the building, southern and western parking, the eastern stormwater management areas, as well as limited areas for deeper utilities. Where encountered, and in order to limit the effects of the swelling potential of the existing weathered shale, weathered rock should be removed to expose a competent bedrock subgrade, at least 18 inches below the proposed subgrade elevation.

[1] Hoover, Shad E.; Wang, Mian C.; and Dempsey, Brian (2004), "Structural Damage Induced by Pyritic Shale," International Conference on Case Histories in Geotechnical Engineering. 2.

Where competent bedrock is encountered above proposed subgrade the bedrock should be removed to at least 18 inches below the subgrade elevation or the proposed utility pipe invert elevations, or deeper if particular bedding thickness is specified. This depth is needed, to seal the exposed bedrock subgrade from oxygen using a bituminous sealant, or an approved equivalent, a 6-inch-thick (minimum) Lean Mat Concrete layer, and a 12-inch-thick layer of Structural Fill soil cushion. Additionally, we recommend sealing the exposed bedrock subgrade within 1-week of their exposure.

If blasting is chosen to be the most economical means of removing bedrock, then blasting should be performed in accordance with the New York State Department of Labor regulations under *§107-05 Safety and Health Regulations, paragraph N*. Additionally, a permit may also be required from the Town of Amsterdam. The blasting contractor should take special care to consider ways to limit overbreak and fracturing to achieve the proposed subgrade.

- **Bedrock Reuse:** Due to the swelling potential of the shale bedrock, removed shale bedrock will not be suitable for reuse as fill material below the proposed building or parking areas, nor in the reinforced zone behind retaining walls. Bedrock reuse should be limited as raise-in-grade fill in landscaped areas, provided it is also located outside the building footprint and the limits of the zone of influence for footings and pavement areas. Re-used shale materials should be expected to experience long-term swelling.

- **Unsuitable Materials:** Clays, Peat, organic silt, and organic topsoil and subsoil containing organic matter such as tree roots, tree stumps, and vegetation debris, should be considered unsuitable material below the proposed warehouse building, floor slabs, retaining walls, and pavement areas. Topsoil and subsoil containing roots should be removed down to a subgrade consisting of the existing inorganic glacial till. Topsoil and subsoil containing less than 5 percent organic material may be re-used deeper than 10 feet below finished grade in parking areas, provided it is also located outside the limits of the zone of influence for stormwater infiltration. Other organic soil may be re-used in proposed landscaped areas or hauled off-Site.

- **Reuse of Excavated Materials:** Excavated overburden soil that meets the material specifications in Table 1 for On-Site Fill may be reused as compacted fill below the base course layer in pavement areas. Excavated overburden soil materials that meet the material specifications in Table 1 for Common Fill may be reused as compacted fill at least 3 feet below the base course in pavement areas. We anticipate the natural silt and clay and glacial till soils will be difficult to place and compact to the required specifications during cold and wet periods of the year. The contractor must protect the excavated clayey soil from inclement weather during the cut and fill earthwork by sequencing the work such that cut material is placed as compacted fill the same day, protecting excavated soil by covering stockpiles, and limiting construction traffic on exposed subgrade soils.

Pyritic Shale should not be processed to produce select materials, nor re-used for site work. Re-use of the Pyritic Shale should be limited to landscape areas only.

Construction Recommendations and Earthwork Procedures

Blasting Requirements

Blasting should be performed in accordance with the New York State Department of Labor regulations (*§107-05 Safety and Health Regulations*, *paragraph N)* and the NYSDOT *Geotechnical Engineering Manual (GEM-22*), which require at a minimum the following activities:

- Preparing pre-blast surveys;
- Preparing a blasting plan;
- Performing the work within regulatory limits for vibration and overpressure (noise);
- Field monitoring for vibration and overpressure using seismographs; and
- Maintaining logs of the drilling and blasting work.

To the extent practical, blasting should be completed prior to the construction of the building foundation, surface finishes, and retaining walls to limit vibration of the proposed structures. Blasting should not be performed within 7 days after concrete is poured unless approved by the Engineer. The blasting contractor should take special care to consider ways to limit overbreak and fracturing to achieve the proposed bedrock subgrade.

Building Area and Footing Subgrade Preparation During Construction

The following describes the recommended earthwork procedures to prepare the building areas.

- At the onset of earthwork operations, the Site should be properly graded to provide a working subgrade for installing the deep foundations elements and to limit stormwater from entering the work areas or ponding on the exposed soil subgrade. Construction traffic over the exposed subgrade should be limited to the extent possible.

- Where additional fill is necessary to achieve proposed grades, On-Site Fill or Structural Fill that meets the material recommendations in Table 1should be utilized. Fill should be placed in loose lifts not to exceed 12 inches in thickness and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

- Excavation and backfilling should be performed in the dry. Fill should not be placed, and footings should not be constructed, over a subgrade with standing water or that is frozen. If standing water is present on the subgrade, then the water should be removed from the surface and soft and yielding soil be removed or allowed to dry prior to placement of additional fill or concrete. IF the subgrade is frozen, then remove the frozen soil or allow the soil to thaw and then recompact the soil prior to placement of fill or concrete.

Subsurface Utility Construction

Trenches for utility excavations should be performed in accordance with local, state, and federal regulations, including the Occupational Safety and Health Administration (29 CFR Part

1926) excavation trench safety standards. A competent person as defined by the regulation is required to confirm the stability of excavations during construction.

Where excavations cannot be sloped back and/or temporarily shored in accordance with OSHA requirements, a temporary earth retaining system (TERS) will be required. The TERS should be selected by the contractor and designed by a Professional Engineer licensed in the State of New York. Care should be taken during construction to protect existing adjacent structures, utilities, and roadways from being undermined.

Fill placed within five (5) feet horizontally of proposed utilities should consist of On-Site Fill, or Structural Fill. Fill should be placed in loose lifts not to exceed 12 inches in thickness and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

Utility Trenching in Bedrock: Bedrock is anticipated to be encountered when excavating trenches in the eastern portion of the Site. Because of this, it is recommended that bedrock be removed to a minimum of 5-feet from the centerline of the proposed utility trench alignment to account for lateral forces due to potential swelling, and at least 18-inches below the proposed invert of utility pipe to allow for sealing of the exposed rock sidewalls and subgrade using spray-on bituminous sealant, or an approved equivalent, and Lean Mat Concrete prior to backfilling with bedding material as specified by others.

Temporary Dewatering

Perched groundwater is expected to exist at depths between 1 to 18.3 feet below the existing surface; therefore, temporary excavation dewatering and/or temporary diversion ditches may be necessary to manage groundwater. Additionally, temporary excavation dewatering in excavations during period of heavy precipitation or snow melt may be needed. Temporary dewatering may be accomplished by pumping filtered water from sumps installed in low points of the excavations. Discharge water should be managed in accordance with local, state, and federal government requirements and the requirements of the project-specific Stormwater Pollution Prevention Plan.

Building Foundation Design

The following sections presents preliminary recommendations for building foundation design.

Drilled Shafts

Due to the potential for post-construction swelling within the pyritic Shale, and the inability to predict location, swell rate, or total movement due to post-construction swelling, we recommend that the building be founded on drilled shafts set into bedrock and integrated with a structural slab overlying a crawlspace with void forms. Based on information provided electronically to Sanborn Head form the DLR Group on March 11, 2025, it is our understanding that the proposed building column loads will range from 160 to 1990 kips.

The following recommended allowable capacities are for the preliminary design of the drilled shafts:

- Skin Friction in Glacial Till: 3 ksf
- Skin Friction in Weathered Bedrock: 3 ksf
- Skin Friction in Competent Bedrock: 8 ksf
- End Bearing in Competent Bedrock: 80 ksf

Skin friction resistance should be ignored between the bottom of the lowest slab and the top of the glacial till. Drilled shafts that derive capacity from combined end bearing and skin friction should be designed to limit the end bearing capacity to a maximum of 50 percent of the total capacity. The minimum center-to-center spacing between drilled shafts designed using skin friction support should be no less than two times the shaft diameter.

We anticipate that the proposed structure can be supported on 2 to 6-foot diameter drilled shafts embedded into competent bedrock depending on the design load. We anticipate that the drilled shafts will be socketed into competent bedrock between 5 to 20 feet depending on the applied load; where socket lengths less than 20 feet are proposed, calculations for the load condition need to be provided by the project team. For drilled shafts with uplift loads, the steel reinforcement should extend the full depth of the drilled shaft. For drilled shafts with lateral loading, the steel reinforcement should extend to the top of bedrock. For drilled shafts with gravity loads only, the steel reinforcement should extend 1/3 the length of the shaft. A bond-break between the concrete shaft and the rock sidewall is recommend.

For lateral support, we recommend the following preliminary design parameters to limit lateral movement to less than 0.5 inches:

- 5-foot-diameter shaft
  - Lateral capacity of 75 kips
  - Max moment is 900 kip-feet
  - Max shear is 80 kips
- 6-foot-diameter shaft
  - Lateral capacity of 100 kips
  - Max moment is 1,500 kip-feet
  - Max shear is 115 kips

Structural Slab Design

We recommend the building slab be constructed as a bi-directional reinforced structural slab with loads transferred to the drilled shafts. We further recommend that the slab system account for a crawlspace below the building to incorporate a void form system designed to limit the effect of ground heave pressure on the proposed slab.

Foundation Design Alternative – Shallow Foundation Bearing on Thickened Structural Fill Soil Cushion

Given the anticipated costs, an alternative to the recommended drilled shafts foundation is currently being evaluated by the project team. A potential alternative foundation concept may include the following:

- Increased bedrock removal (i.e., a deeper profile);
- Placement of a Structural Fill soil cushion that would attenuate the potential differential swelling of the shale;
- Construction of a reinforced soil layer to support the overlying reinforced concrete slab.

This design alternative would need to consider variable uplift displacement and pressures of the pyritic shale balanced against soil cushion thickness and/or geogrid reinforcement requirements. The benefit of this alternative is that a conventional shallow foundation design and construction can be employed rather that the deep foundation design, which could yield schedule benefits. However, the alternative design will generate a significantly greater volume of unsuitable 'waste' rock and required an associated increase volume of soil import.

Slope Design

We recommend that cut and fill slopes be designed with a slope angle of two and a half horizontal to one vertical (3H:1V) or flatter. Vegetative cover should be established on the slope surface as soon as practical after final grading to reduce the potential for erosion and soughing failures. Inboard slopes of stormwater basins should be graded to a slope of 3H:1V or flatter and seeded to establish vegetative cover.

If slope angles up to 1H:1V are proposed, then the slopes should be constructed with Structural Fill with reinforced with a geogrid or similar reinforcement. The 1H:1V fill slope should be designed by a Professional Engineer licensed to practice in the State of New York and the design should be reviewed by Sanborn Head. Geogrid, or similar reinforcement, should be installed in accordance with the manufacturer's specifications, including anchoring and embedment at the toe of the slope as appropriate. For erosion control, the face of the 1H:1V fill slopes may be covered with a vegetated mesh or blanket system, such as Tensar's Sierra slope reinforcement system, or approved equivalent.

Stormwater swales or curbing should be provided at the crest of soil cut and fill slopes to intercept and divert the runoff away from the slope face. Additionally, a drain and swale should be constructed at the base of the proposed bedrock cut face to intercept groundwater that may come perched on the bedrock.

Retaining Wall Design

We anticipate that segmental retaining walls can be used to support access roads and parking areas as an alternative to steep slopes. A segmental retaining wall system consists of a mortarless block face fastened to geogrid that extends into a granular backfill creating a zone of reinforced earth, which together behaves as a gravity wall. Geogrid elements typically extend

behind the wall approximately 0.7 times the height of the wall for level backfill and approximately 0.7 to 0.9 times the height of the wall for sloping backfill.

We understand that the subsurface infiltration systems are proposed to be constructed below the paved parking and drive aisles located to the northeast and west of the proposed building. It should be noted; segmental retaining walls are not designed to withstand hydrostatic pressure (water buildup) and stormwater runoff should be diverted away from the retaining wall area. Several wall design features (e.g., stone or geo-composite chimney drain, a impermeable geomembrane at the rear of the reinforced soil zone, base drains, and increased frequency of weepholes behind the retaining wall faces) alone or in combination, may be required to alleviate the potential of hydrostatic pressure adversely affecting the wall stability and performance. The outlets from the drainage system should discharge to the ground surface downhill and away from the retaining wall. Given the fine-grained nature of the Site soil, riprap (see table 1) or similar along the toe of the wall may be required to reduce erosion by the water draining from behind the wall.

An acceptable foundation subgrade for segmental retaining walls shall consist of either Structural Fill compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C placed over the undisturbed glacial till. Where bedrock subgrades are encountered the exposed bedrock subgrade shall be sealed from oxygen using a bituminous sealant, or an approved equivalent, a 6-inch-thick (minimum) Lean Mat Concrete layer, and a 12-inch-thick layer of Structural Fill soil cushion to proposed bottom of wall subgrade.
We recommend that retaining walls greater than 4 feet in height be designed by a Professional Engineer licensed to practice in the State of New York. Sanborn Head should be retained to review the retaining wall design. A global stability and seepage analysis should be performed during the design phase to evaluate the overall wall stability and hydrostatic conditions behind the wall. If authorized, then Sanborn Head can perform a global stability and seepage analysis once site grades are finalized.

The design of retaining walls should use the following recommended parameters as well as building foundation loads as applicable:

Exhibit 1 – Recommended Retaining Wall Design Parameters

Material	Moist Unit Weight (pcf)	Internal Friction Angle (degrees)	Cohesion (psf)
Reinforced Fill (Engineered Fill)	130	34	0
Retained Soil (On-Site glacial Till)	130	28	0
Retained Soil (On-Site Clay and Silt Soil)	120	28	500
Backfill Slope Angle Behind Wall – 3:1H:1V or flatter. Slope Angle Below Wall – 3H:1V or flatter Traffic Surcharge Design Load Behind Wall – 250 psf Min. Factor of Safety for Global Stability – 1.5 Min. Factor of Safety Against Overturning – 2.0 Min. Factor of Safety Against Sliding – 1.5 Min. Factor of Safety Against Geogrid Tensile Overstress – 1.5			

Min. Factor of Safety Against Geogrid Pullout from Soil – 1.5 Seismic Design Load – Per BCNYS. Net Allowable Soil Bearing Pressure – Not to exceed 5,000 psf

Seismic Design Criteria

The BCNYS incorporates the 2018 International Building Code (IBC) by reference with base code amendments specific to New York. We recommend using the following design parameters as defined by the BCNYS and the IBC:

- Seismic Site Class: Based on the proposed building location, elevation, and available subsurface information, **Site Class "C"** is recommended for the proposed building.
- Design earthquake spectral response accelerations: S_{DS} = 0.199g and S_{D1} = 0.054g.

Lateral Earth Pressures

Below grade walls restrained from rotation, with a horizontal backfill surface, and no groundwater should be designed based on an "at-rest" lateral earth pressure of 60 pounds per cubic foot (pcf).

Below grade walls that are unrestrained at the top and allowed to rotate at least 0.002 times the height of the wall should be designed based on an "active" lateral earth pressure of 40 pcf.

Below grade walls should be designed to resist lateral earth pressure from a seismic event as required by Section 1605.3.1 of the BCNYS.

To evaluate sliding resistance, a coefficient of friction of 0.50 is recommended for cast-in-place concrete on granular soil (or 0.55 for cast-in-place concrete on clean gravel). The passive resistance inside the building and below the floor slab should be modeled as an equivalent fluid pressure of 460 pcf. These frictional resistance and passive resistance values should be considered ultimate strength values, and an appropriate factor of safety should be applied for the sliding analysis. Figures 4 and 5 provide recommended earth pressure diagrams for below grade wall design.

Foundation Drains

Due to the shallow bedrock encountered within the proposed warehouse building footprint. To control groundwater that may be perched above the bedrock, we recommend that the sub-slab drains be installed below the structural slab and perimeter drains adjacent to exterior footings. The subslab drains should consist of a 12 inches layer of Crushed Stone and a minimum 10-mil-thick vapor barrier. The perimeter drains should consist of 4-inch-diameter perforated pipe surrounded by at least 12 inches of Crushed Stone wrapped with nonwoven geotextile as specified in Table 1 – Material Specifications. Additionally, we recommend evaluating the installation of drainage board or the use of free-draining materials, such as Structural Fill as specified in Table 1 – Material Specifications to assist in collecting and directing groundwater towards foundation drains.

Pavement Design and Earthwork Recommendations

The following provides recommendations for pavement design and earthwork in pavement areas.

Subgrade Preparation Procedures for Pavement Areas

The pavement areas should be prepared as follows:

- Vegetation, topsoil, organic matter, and other unsuitable materials should be removed to expose the top of the existing, inorganic natural glacial till subgrade.

- The Site should be graded to direct stormwater away from entering the work areas or ponding on the exposed soil subgrade. The exposed subgrade soils may be sensitive to disturbance and strength degradation in the presence of excess moisture. Construction traffic over the exposed soil subgrade should be limited to the extent practical. The subgrade soil should also be considered frost susceptible.

- Prior to placing fill, the subgrade should be proof-compacted with at least 4 passes of a 10-ton vibratory roller under the observation of a qualified geotechnical engineer, or their representative. Soft or loose zones identified by the proof compaction should be evaluated by excavation and replaced with compacted Structural Fill as necessary. Proof compaction may be waived in the field by the qualified geotechnical engineer, if in their opinion, the proof compaction will cause disturbance to the subgrade.

- General raise-in-grade fill to be placed up to subgrade for pavement base course in proposed pavement areas should consist of Structural Fill. This material should be placed in loose lifts not exceeding 12 inches thick and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

- In the southern and western loading dock, driveways, and parking lot at proposed pavement subgrade locations, bedrock should be removed to at least 36 inches below the proposed bottom of pavement section to allow for the application of a bituminous sealant, or an approved equivalent, to seal the exposed bedrock subgrade from oxygen, a 6-inch minimum Lean Mat Concrete, and a 30-inch Structural Fill soil cushion to proposed pavement subgrade prior to placement of base course materials.

  Alternatively, a slab ‘deck’ may be evaluated to span both rock cut areas and proposed fill areas for the portion of the proposed pavement areas in the southern and western pavement and loading dock areas, supported on a bi-directional slab, incorporated into the building design, and support on drilled shafts. This alternative may reduce the total length required for soil retention by retaining walls and provide reuse potential for unsuitable rock.

- Construct the appropriate pavement cross-section (standard-duty or heavy-duty) at locations identified on plans prepared by others. The base course layer should be placed and compacted to at least 95 percent of its maximum dry density as determined by ASTM D1557, Method C.

Asphalt (Flexible) Pavement Design

The asphalt (flexible) pavement design is intended to strike a balance between performance and cost after considering the soil available at the Site and assumed traffic loads for the proposed use as a warehouse with significant loading dock functions, and the frost susceptible nature of the on-site soils. We recommend the following asphalt pavement cross-sections for standard-duty and heavy-duty applications.

Exhibit 2 – Asphalt (Flexible) Pavement Design

Layer	Thickness	
	Standard Duty (Car Parking)	Heavy Duty (Access Roads/Loading)
Asphalt Wearing Course	2.0 inches	2.5 inches
Asphalt Binder Course	3.5 inches [2.0][1]	4.0 inches [2.5][1]
Pavement Base Course (Subbase Course Type 1, NYSDOT Item 733-0401)	12 inches	12 inches

Notes:

1. An alternative reduced material thickness is shown in brackets [ ] and may be used provided the project team elects to install Tensar TX7 (or similar) Geogrid Reinforcement.

Rigid (Portland Cement Concrete) Pavement Design

We recommend the following cross-sections for standard-duty and heavy-duty rigid pavement applications:

Layer	Thickness	
	Standard Duty	Heavy Duty
Portland Cement Concrete (Unreinforced 4,000 psi)	6 inches	8 inches
Pavement Base Course (Subbase Course Type 1, NYSDOT Item 733-0401)	12 inches	12 inches

Crack control joints should be installed at a spacing of no more than 15 feet on center for rigid pavements.

Please note that some frost-heave should be expected below unheated areas unless four (4) feet of non-frost susceptible material (e.g., Crushed Stone) is provided. A minimum of 12 inches of Crushed Stone (or similar non-frost susceptible soil) may be considered as base course below sidewalks and landscape pavers, especially at building entrances. Under no circumstance should on-site fill be used as base course below sidewalks or pavement; base course should consist only of those materials described herein.

ADDITIONAL ANALYSIS

As part of the on-going consideration for foundation alternatives, Sanborn Head recommends performing additional analysis by way of “Free Swelling Tests” on the existing pyritic shales, in

order to estimate total displacement due to swelling for the design of the void space below the proposed slab and to provide benchmarking of the uplift forces due to swelling for the design of drilled shafts or thickened Structural Fill soil cushion design alternatives. Free Swelling Tests will likely include the collection of bulk rock samples (by mechanical removal), placement under unconfined conditions or oedometric conditions (i.e., radially constrained) and systematic measurement. Field vs laboratory setting, duration and additional variables, such as frequency of water and/or air exposure, can be considered for benchmarking.

CONSTRUCTION MONITORING

We recommend that Sanborn Head be provided the opportunity to review the design drawings and specifications to verify that the recommendation of this report were appropriately incorporated. We further recommend that Sanborn Head be retained to observe earthwork operations and blasting, perform quality control testing on compacted fill, observe foundation subgrade preparation and retaining wall construction, and assist in the development of design changes should subsurface conditions differ from those anticipated prior to the start of construction.

We appreciate the opportunity to be of service on this project. As design progresses or changes, additional explorations or information may be required prior to issuing a final geotechnical report. Please contact Luke Norton by phone at (978) 577-1030 or via email at lnorton@sanbornhead.com should you need additional information or wish to discuss the contents of this report.

Very truly yours,
SANBORN, HEAD ENGINEERING, P.C.

Table

TABLE 1
MATERIAL SPECIFICATIONS
Proposed Amazon ARS Facility – MSV1
Amsterdam, New York

Structural Fill to be used as raise-in-grade fill below buildings shall consist of hard, inert, durable gravel and sand that is free from ice and snow, roots, surface coatings, sod, loam, clay, rubbish, and other deleterious or organic matter. It shall conform to the material and gradation requirements as specified below. On-Site Fill may be used as Structural Fill provided weather conditions are favorable for recompaction to the specified density.

Sieve Size	Percent Passing by Weight
4-inch	100
1-inch	85-100
No. 4	50-100
No. 40	20-75
No. 200	0-12

On-Site Fill to be used for general raise-in-grade fill in building and pavement areas below the base course layer shall consist of inorganic soil from on-site cut areas and shall be free from ice, snow, roots, sod, loam, clay, rubbish, and other deleterious matter and shall be well-graded within the following gradation requirements:

Sieve Size	Percent Passing by Weight
8-inch	100
1-inch	85-100
No. 4	30-90
No. 40	10-60
No. 200	0-35

**Maximum particle size shall be 4 inches where fill is placed within 3 feet of the building finished floor elevation.*

Base Course for Pavement (Subbase) to be used as the base course layer directly beneath the asphalt binder course in pavement areas shall conform to the material and gradation requirements for Subbase Course, Type 1 (NYSDOT Item 733-0401).

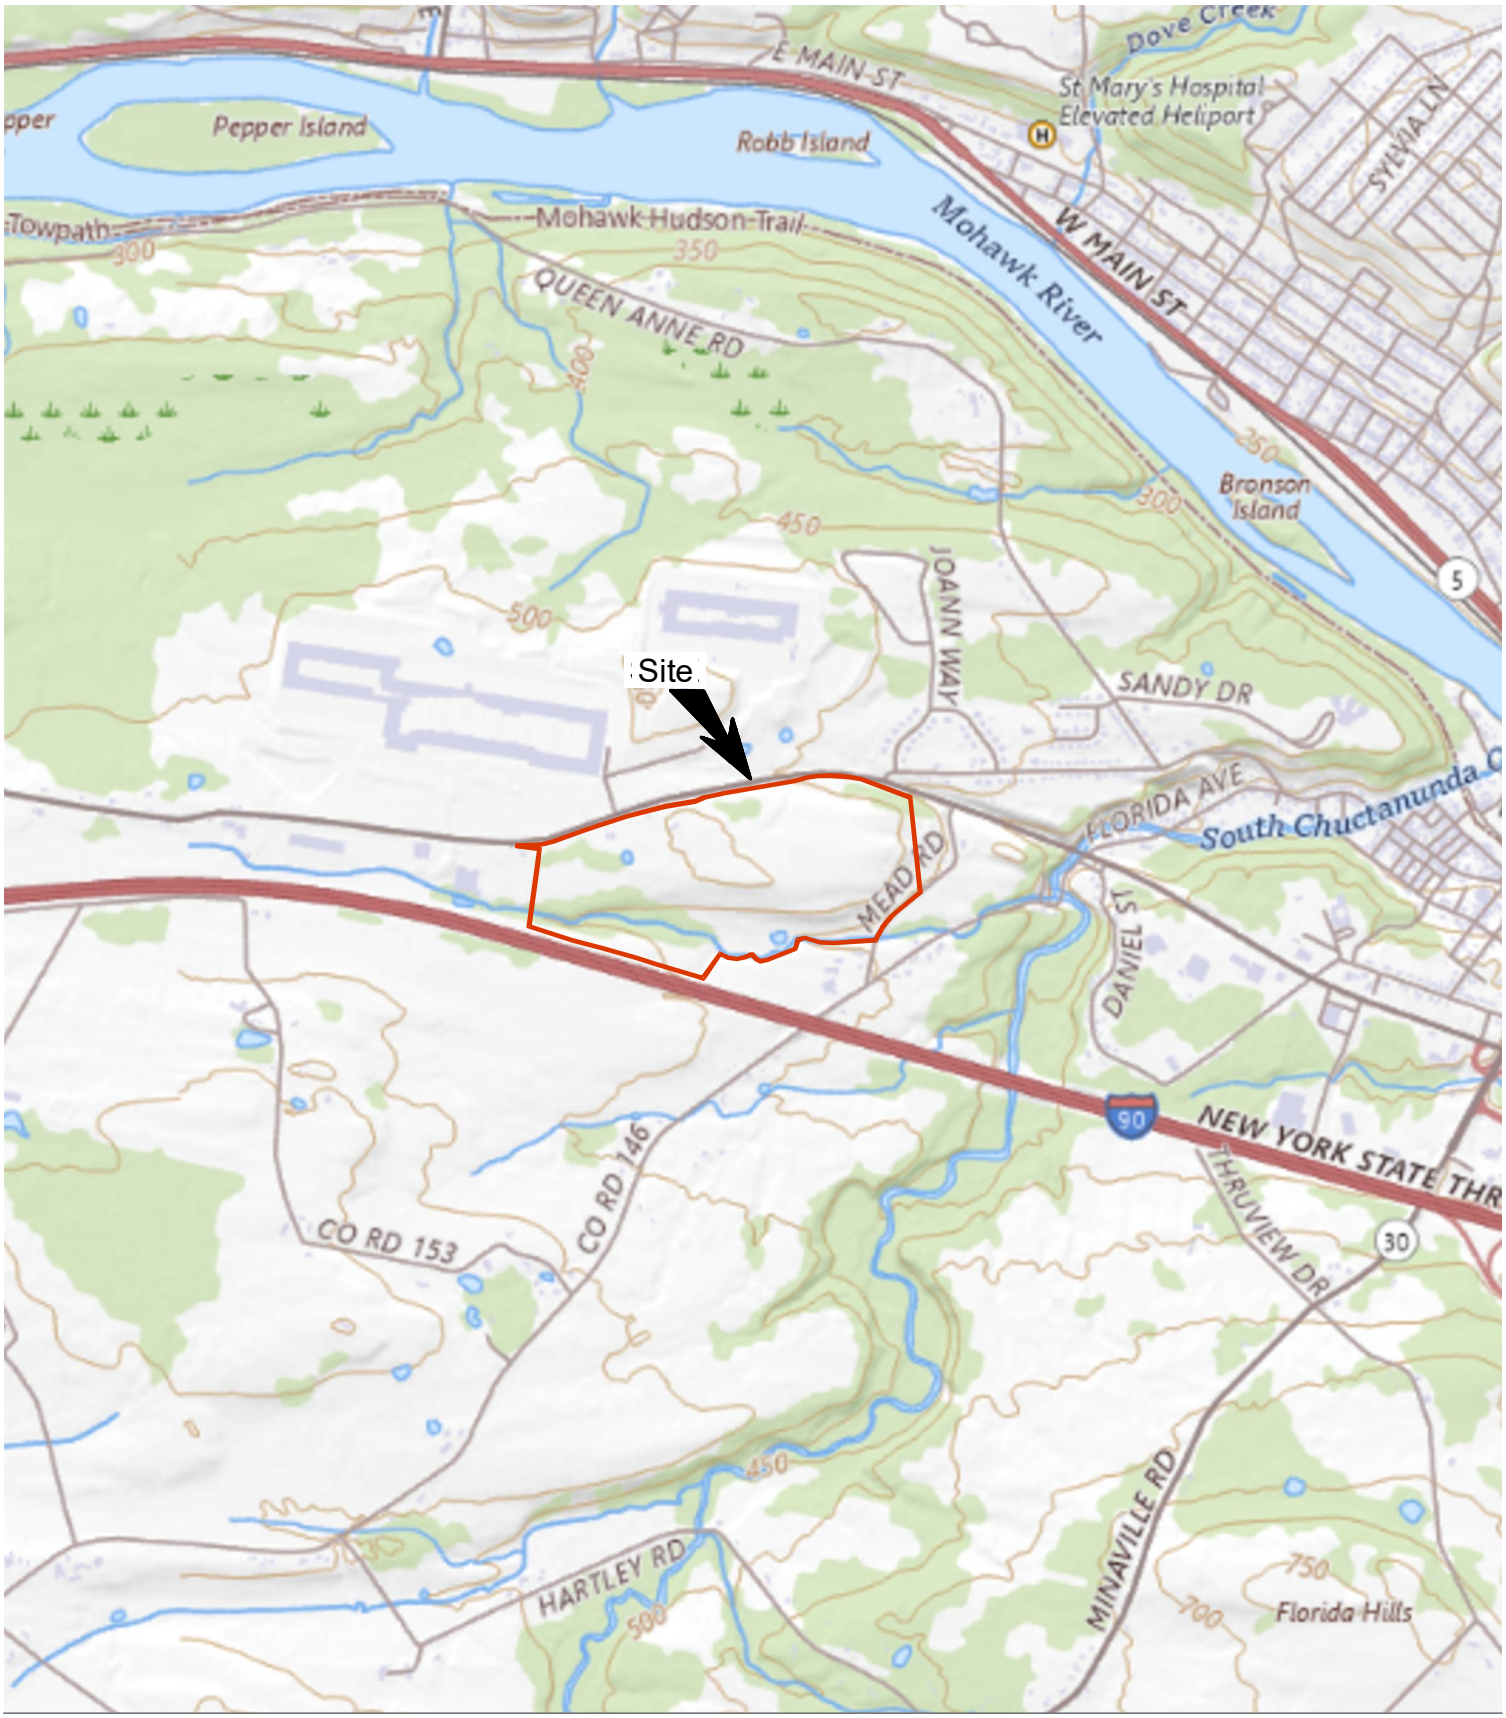
Crushed Stone to be used as base course beneath the slab, for stabilizing footing subgrades, as drainage stone around perforated pipe shall consist of hard durable processed 1-inch crushed stone that meets the requirements for NYSDOT Item 703-02, Coarse Aggregate Size No. 2, in the Standard Specifications.

Riprap to be used where specified on the drawings shall consist of sound, durable stone, free from structural defects with approximately one reasonably flat side for top surface. The stone shall meet the requirements for Riprap, NYSDOT Item 733-22. These requirements are that each stone shall weigh not less than 100 pounds, and at least 50 percent of the total shall consist of stones weighing not less than

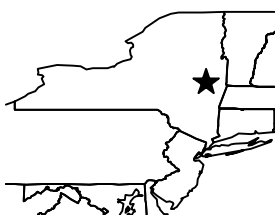
300 pounds each. The riprap shall not be dropped onto the underlying geotextile from a height greater than 1 foot.

Geotextile for Riprap to be placed beneath Riprap and where shall consist of a woven polypropylene fabric with a puncture resistance (ASTM D4833) of at least 120 pounds and an apparent opening size (ASTM D4751) of 0.5 millimeters (No. 70 sieve size), or less, such as Mirafi 600X, or approved equivalent.

Geotextile shall consist of a nonwoven polypropylene fabric having a Puncture Resistance (ASTM D4833) of at least 65 pounds, a Permittivity (ASTM D4491) of at least 130 gal/min/sf, and an Apparent Opening Size (ASTM D4751) of 0.15 to 0.22 millimeters such as Mirafi 140N, or Contech C-40NW, or approved equivalent.



Lean Mat Concrete to be used to seal exposed competent Shale bedrock subgrades and shall consist of a ratio of 1:3:6 or 1:4:8 (Cement:Sand:Aggregate) with a compressive strength of 1000 to 2000 psi at 28 days.



Flowable Fill to be used to backfill irregularly shaped excavations or to fill abandoned subsurface utilities shall consist of high slump Portland cement concrete with a compressive strength of 100 to 150 psi at 28 days.

Perforated Pipe to be used behind retaining walls and for foundation drains shall consist of perforated, corrugated, dual wall high-density polyethylene (HDPE) such as ADS N-12 or Schedule 40-PVC pipe, or their equivalents. The perforation size shall be compatible with the specified Crushed Stone particle size.

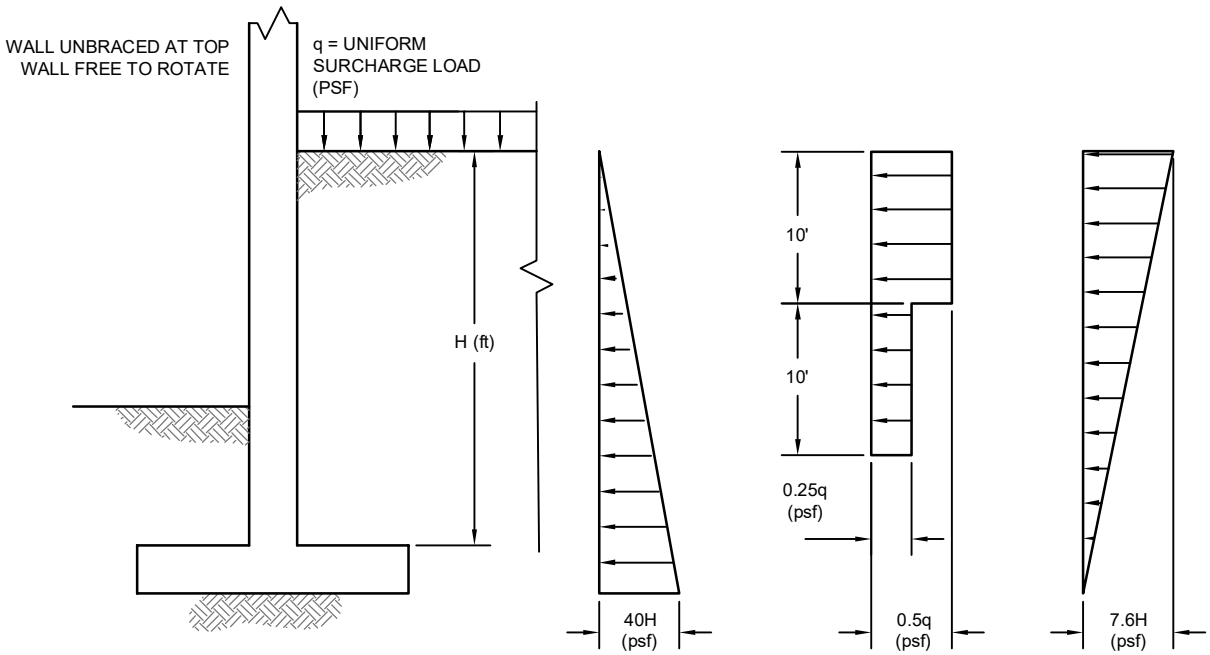
AT-REST LATERAL EARTH PRESSURE | SURCHARGE (SEE NOTES 4 & 5) | SEISMIC (SEE NOTE 6)



NOTES:

1. LOADS ASSUME FOUNDATION WALLS ARE DESIGNED TO LIMIT WALL ROTATION.
2. PRESSURE DISTRIBUTIONS ASSUME FOUNDATION WALL BACKFILL ON-SITE PREPARED AS SPECIFIED IN ACCORDANCE WITH THE RECOMMENDATIONS PRESENTED HEREIN.
3. PRESSURE DISTRIBUTIONS ASSUME SOIL BEHIND WALLS IS DRAINED. THEREFORE NO HYDROSTATIC PRESSURE IS DEVELOPED BEHIND WALLS.
4. FOUNDATION WALL SHOULD BE DESIGNED TO SUPPORT A TEMPORARY CONSTRUCTION SURCHARGE PRESSURE DEPENDING ON THE WALL LOCATION AND FUNCTION. IT IS RECOMMENDED THAT A UNIFORM SURCHARGE LOAD OF 250 PSF IS ASSUMED IF HEAVY COMPACTION EQUIPMENT IS TO BE USED.
5. IGNORE SURCHARGE LOADS BELOW A DEPTH OF 20 FEET.
6. BASED ON THE BUILDING CODE OF NEW YORK STATE. 2020 EDITION, AND TOTAL UNIT WEIGHT OF 135 PCF, USE 7.6H FOR SEISMIC SITE CLASS "C".
7. SLIDING FRICTION COEFFICIENT OF 0.50 IS RECOMMENDED FOR THE WALL FOOTING BEARING ON INORGANIC, GRANULAR SOIL. THE RESULTING RESISTANCE FORCE SHOULD BE CONSIDERED AN ALLOWABLE STRENGTH VALUE.
8. A PASSIVE EARTH PRESSURE OF 460H SHOULD BE USED IN LOCATIONS THAT WILL NOT BE SUBJECT TO FUTURE EXCAVATION OR DISTURBANCE. THE RESULTING RESISTANCE FORCE SHOULD BE CONSIDERED AN ULTIMATE STRENGTH VALUE.

Limitations

APPENDIX A
LIMITATIONS

Explorations

1. The analyses, recommendations, and designs submitted in this report are based in part on the data obtained from subsurface explorations. The nature and extent of variations between these explorations may not become evident until construction. If variations then appear evident, it will be necessary to re-evaluate the recommendations of this report.
2. The generalized soil profile described in the text is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized, and were developed by interpretation of widely spaced explorations and samples; actual soil transitions may be more or less gradual than indicated. For specific information, refer to the test boring logs.
3. Water level readings were made in the drill holes at the times and under the conditions stated on the exploration logs. These data were reviewed and interpretations were made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, and other factors differing from those occurring at the time measurements were made.

Review

4. In the event that any changes in the nature, design, or location of the proposed building are planned, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed, and conclusions of the report modified or verified in writing by Sanborn Head.

Construction

5. It is recommended that Sanborn Head be retained to provide geotechnical engineering services during the excavation and earthwork construction phases of the work. This is to observe compliance with the design concepts, specifications, or recommendations and to allow design changes in the event that subsurface conditions differ from those anticipated prior to the start of construction.

Use of Report

6. This report was prepared for the exclusive use of BMG Albany LLC for the proposed Amazon ARS Facility in Amsterdam, New York, in accordance with generally geotechnical engineering practices. No other warranty, expressed or implied, is made.
7. This report was prepared for this project by Sanborn Head for preliminary design purposes only and is not sufficient to prepare an accurate bid. Contractors wishing a copy of this report may secure it with the understanding that its scope is limited to preliminary design considerations only.

Boring / Monitoring Well Log Legend

SANBORN HEAD

Sanborn, Head & Associates, Inc.

Project: Industrial Site Redevelopment
Location: Anytown, State
Project No.: 1234.56

Log of Monitoring Well SH-1

Ground Elevation: 112.2 feet
TOC Elevation: 115.2 feet
PVC Elevation: 115.10 feet
Datum: MSL

Drilling Method: Mobile B-53 Truck, 5" PW Drive & Wash

Sampling Method: 2" O.D. Split Spoon w/140 lb Safety Hammer

Drilling Company: Ground Down Drilling Co.
Foreman: J. Driller
Date Started: 06/25/08 **Date Finished: 06/26/08**
Logged By: A. Engineer **Checked By: A. Principal**

Groundwater Readings

Date	Time	Depth to Water	Ref. Pt.	Depth of Casing	Depth of Hole	Stab. Time
06/24/08	09:45	10.0'	Ground	27'	27'	<5 min
06/25/08	14:50	12.0'	Top of PVC	Well Installed	50'	15 min
07/03/08	13:00	12.2'	Top of PVC	Well Installed	50'	8 days

Depth (ft)	Casing Blows (per ft)	Drill Rate (min/ft)	Sample Information					Stratum		Geologic Description	Well Diagram	Well Description
			Sample No.	Depth (ft)	Spoon Blows per 6 in	Pen/ Rec (in)	Field Testing Data	Log	Description			
1	2	3	4	5	6	7	8	9	9	10	11	11

1. The numbers in this column report the depth in feet below ground surface.

2. The numbers in this column report the number of blows required to drive the drill casing one foot using a 300 pound hammer, unless otherwise specified.

3. The numbers in this column report the rate of advance when coring rock.

4. The values in this column report the sample designation. In the example S-1, "S" indicates the sample type and "1" indicates the sample number.

"S" indicates split spoon sample
"U" indicates Shelby tube sample
"C" indicates rock core sample
"G" indicates grab sample

5. The numbers in this column report the depth, in feet, from the ground surface of the sample identified in column 4.

6. The numbers in this column report the number of blows required to drive a split spoon sampler 6 inches using a 140 pound hammer free falling 30 inches. The standard split spoon sampler is 1-3/8 inch inside diameter and 2 inches outside diameter. The Standard Penetration Resistance, or N-value in blows per foot, is the sum of the blows recorded over the second and third 6-inch interval.

A number followed by "/3" indicates the distance that the sampler advanced. For example "100/4" indicates that 100 blows of a 140 pound hammer falling 30 inches advanced the sampler 4 inches. "WOR/24" indicates the weight of the drilling rods without the hammer caused the sampler to advance 24 inches.

"WOH" indicates the static weight of the 140 pound hammer and the drilling rods attached to the split spoon sampler were sufficient to cause the sampler to advance.

"WOR" indicates the static weight of the drilling rods attached to the split spoon sampler was sufficient to cause the sampler to advance.

7. The values shown are the length of the soil or rock core sampler penetration and the number of inches of sample recovered from the sampler.

8. The values shown are the results of field tests performed on soil or rock samples. The test method, result and units are indicated. Unless otherwise noted "ND" denotes not detected.

9. These columns provide a graphic illustration and verbal description of the subsurface soil and rock strata. The depths of strata changes should be considered approximate and general in nature, actual strata changes in the field may be more gradual.

10. Descriptions of soil samples include:

- the density or consistency;
- color;
- a listing of MAJOR and minor soil components based on particle size and plasticity;
- structure,
- moisture; and
- other pertinent characteristics.

For example: Medium dense, brown, fine to medium SAND, trace Silt. Stratified. Moist. Faint petroleum odor.

Description of rock core samples include:

- hardness, weathering, rock continuity, color, texture, rock type, structure; and RQD (%)

For example: Hard to very hard, slightly weathered, grey-green, fine grained, RHYOLITE, with joints spaced 4 to 12 inches apart and dipping from near horizontal to approximately 60°. Open crack in core at 14.4', moderately fractured . RQD=58%

NOTE: "RQD" is defined as the summation of all pieces of rock core greater than 4 inches in length divided by the length of the core run and expressed as a percentage.

11. Monitoring well materials or other equipment installed within the borehole are graphically presented in these columns. If no equipment was installed, these columns are used for notes, remarks or other pertinent observations.

(c) 2013 Sanborn, Head & Associates, Inc.

Description and Classification of Soil

1. Density or Consistency: The density or consistency of a soil sample is based on the Standard Penetration Test N-value according to the following table:

Density of Granular Soil	SPT N-Value		Consistency of Cohesive Soil
Very Loose	0-4	<2	Very Soft
Loose	5-10	2-4	Soft
Medium Dense	11-30	5-8	Medium Stiff
Dense	31-50	9-15	Stiff
Very Dense	>50	16-30	Very Stiff
		>30	Hard

The Standard Penetration Resistance, or N-value in blows per foot, is the sum of the blows recorded over the second and third 6-inch interval.

A number followed by "/3" indicates the distance that the sampler advanced. For example "100/4" indicates that 100 blows of a 140 pound hammer falling 30 inches advanced the sampler 4 inches. "WOR/24" indicates the weight of the drilling rods without the hammer caused the sampler to advance 24 inches.

"WOH" indicates the static weight of the 140 pound hammer and the drilling rods attached to the split spoon sampler were sufficient to cause the sampler to advance.

"WOR" indicates the static weight of the drilling rods attached to the split spoon sampler was sufficient to cause the sampler to advance.

2. Color: The color of a soil sample is based on visual observation.

3. Soil Components

A. Description: The components of a soil sample are described by visually estimating the percentage of each component by weight of the total sample using a Modified Burmister System.

i. Major Component: The major soil component is written with upper case letters for granular soil (e.g., SAND, GRAVEL) and a combination of upper and lower case letters for fine grained soil (e.g., Silty CLAY, Clayey SILT).

ii. Minor Component: The minor soil components are written with the first letter of each soil type in upper case, and the remaining letters in lower case (e.g., Gravel, Silt). The minor components are identified and prefaced in the description based on the following percentages:

Preface	Percentage
and	35-50
some	20-35
little	10-20
trace	0-10

iii. Note: The actual percentages of gravel soil may differ from that measured when sampling with a standard split spoon sampler because of the relatively small sampler diameter. Also, it is not possible to identify the presence of boulders and cobbles using a standard split spoon sampler.

B. Definitions

i. Granular Soil: A granular soil sample is defined by the following particle sizes as referenced to a standard sieve:

Material	Description	Standard Sieve Limit	
		Upper	Lower
Boulders	C-sized	--	36 inch
	B-sized	36 inch	24 inch
	A-sized	24 inch	12 inch
Cobbles	--	12 inch	3 inch
Gravel	coarse	3 inch	3/4 inch
	fine	3/4 inch	No. 4
Sand	coarse	No. 4	No. 10
	medium	No. 10	No. 40
	fine	No. 40	No. 200

ii. Fine Grained Soil: The degree of plasticity of fine-grained soils is defined as follows:

Material	Degree of Plasticity	Plasticity Index (PI)	Smallest Thread Diameter (in.)
SILT	Non-Plastic	0	None
Clayey SILT	Slight	1 to 5	1/4
SILT & CLAY	Low	5 to 10	1/8
CLAY & SILT	Medium	10 to 20	1/16
Silty CLAY	High	20 to 40	1/32
CLAY	Very High	40+	1/64

iii. Organic Soil: An organic soil sample is classified by observation of the sample structure as follows:

Material	Description
TOPSOIL	Surficial soils that support plant life and which contain organic matter.
SUBSOIL	Soil underlying the topsoil which may contain roots or plant fibers.
PEAT	Deposits of plant remains in which the original plant fibers or root structure are visible.
ORGANIC SILT	Deposit of plant remains in which the original plant fibers or root structure have decomposed.

iv. Non-Soil Constituents: Non-soil constituents (artificial or anthropogenic material, organic materials, cobbles and boulders) are described as follows:

The following terminology is used to denote size ranges of non-soil constituents such as man-made objects or fill material:

Descriptive Term	Size Range	Comparative Term
Specks	< No. 200 Sieve	Silt and Clay fines
Particles	No. 200 Sieve to No. 4 Sieve	Sand
Fragments	No. 4 Sieve to 3 in.	Gravel
Pieces	3 in. to 12 in.	Cobbles
Blocks	> 12 in.	Boulders

The following terminology is used to describe the frequency that a non-soil constituent is observed by estimating the percentage of the constituent by weight of the total sample:

Descriptor	Percentage
very few	0-5
few	5-10
common	10-20
frequent	20-35
numerous	35-50

4. Moisture Content: The moisture content of a soil sample is based on the observable presence of water according to the following table:

Dry	Moisture is not apparent, dusty.
Moist	No visible water.
Wet	Visible free water.

5. Other Pertinent Characteristics: Pertinent characteristics observed in a soil sample should be noted according to the following table:

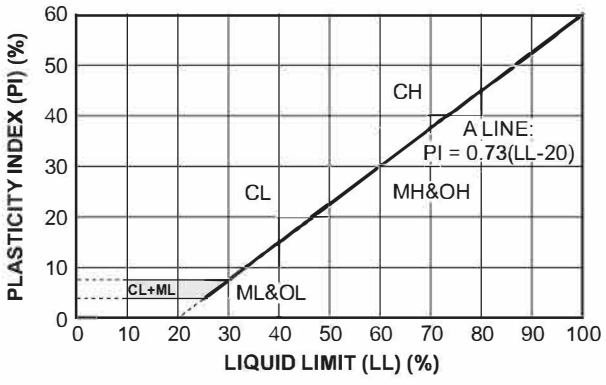
Soil Structure Produced by Deposition of Sediments	
Stratified	Random soil deposits of varying components of color.
Varved	Alternating soil deposits of varying thickness (i.e., clays or silts).
Stratum	Soil deposit > 12 inches thick.
Layer	Soil deposit 3 inches to 12 inches thick.
Seam	Soil deposit 1/8 inch to 3 inches thick.
Parting/Lens	Soil deposit <1/8 inch thick.

(c) 2018 Sanborn, Head & Associates, Inc.

UNIFIED SOIL CLASSIFICATION SYSTEM (USCS)LEGEND AND SYMBOLOGY

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)	SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils



LABORATORY CLASSIFICATION CRITERIA

GW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
GP	Not meeting all gradation requirements for GW	
GM	Atterberg limits below "A" line or P.I. less than 4	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols
GC	Atterberg limits above "A" line with P.I. greater than 7	
SW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
SP	Not meeting all gradation requirements for GW	
SM	Atterberg limits below "A" line or P.I. less than 4	Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols.
SC	Atterberg limits above "A" line with P.I. greater than 7	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

Less than 5 percent ..... GW, GP, SW, SP
More than 12 percent ..... GM, GC, SM, SC
5 to 12 percent ..... Borderline cases requiring dual symbols

Bulk Density and Compressive Strength of Rock Core Specimens by ASTM D7012 Method C

Boring ID	Sample Number	Depth	Bulk Density, pcf	Compressive strength, psi	Failure Type	Meets ASTM D4543	Note(s)
---	SH-10 C1	11.4-11.8 ft	164	21393	1	No	1,*

Notes: Density determined on core samples by measuring dimensions and weight and then calculating.

All specimens tested at the approximate as-received moisture content and at standard laboratory temperature.

The axial load was applied continuously at a stress rate that produced failure in a test time between 2 and 15 minutes.

Failure Type: 1 = Intact Material Failure; 2 = Discontinuity Failure; 3 = Intact Material and Discontinuity Failure (See attached photographs)

1: Best effort end preparation. See Tolerance report for details.
2: The as-received core did not meet the ASTM side straightness tolerance due to irregularities in the sample as cored.
3: Specimen L/D < 2.
4: The as-received core did not meet the ASTM minimum diameter tolerance of 1.875 inches.
5: Specimen diameter is less than 10 times maximum particle size.
6: Specimen diameter is less than 6 times maximum particle size.

*Because the indicated tested specimens did not meet the ASTM D4543 standard tolerances, the results reported here may differ from those for a test specimen within tolerances.

Synoptic Board

Petrographic facies	IP	Core	PISP								
Black calcareous mudstone	0.5	50	50								
PISP per fraction:			50								

PISP of material: 50

Remarks:

The rock core sample received presents the following characteristics:

- Length : 120 mm
- Diameter : 47 mm
- Weight : 619 g
- This type of rock presents a moderate to high swelling potential, according to BNQ 2560-511 Standard.
- Strong reaction to HCl 10 %.
- No sign of sulfide oxidation, no sign of sulfation.

Appendix F – Overall Utility Plan
Appendix G – Partial Utility Plans

1) EXECUTIVE SUMMARY

This Water Distribution System Engineer's Report has been prepared for the Applicant, BMG Albany, LLC, who is proposing to develop the ±137.2-acre property (Tax Map ID 54.-1-36) at Route 5S/Mead Road in the Town of Florida, Montgomery County, New York. The project, known as MSV1, consists of the construction of a ±3.2 million square foot (±652,000 SF footprint, 5 stories) warehouse facility with associated car and trailer parking, trailer loading docks, stormwater basins, site utilities, signage, lighting and landscaping.

The water service portion of the project involves:

- Connection to the existing 10" water main located along Route 5S
- Installation of ±2,210 linear feet of 10" diameter C900 water service line
- Installation of ±190 linear feet of 8" diameter C900 water service line to fire suppression tanks
- Installation of ±4,590 linear feet of 10" diameter C900 fire suppression line around the warehouse
- Installation of ±255 linear feet of 6" diameter C900 water service line to building
- Installation of ±460 linear feet of 6" diameter C900 fire hydrant laterals
- Installation of ±210 linear feet of 2" diameter Type K copper water service to secondary guard house
- Installation of ±1,940 linear feet of 1.5" diameter Type K copper water service to primary guard house
- Installation of ±1,330 linear feet of 2" diameter force main
- Installation of nineteen (19) fire hydrants around the building
- Installation of two (2) 4" Storz fire department connections
- Installation of two (2) fire suppression tanks of approximately 360,000 gallons

2) PROJECT INFORMATION

The Applicant is proposing to develop a property in the Town of Florida, Montgomery County, New York (see Appendices A and B). The site is further designated as parcel 54.-1-36 and is approximately 137.2 acres. The project site is bounded by the Target Distribution Center and Beech-Nut Nutrition Company to the north across Route 5S, residential land to the east, NYS Route 90 to the south, and the Amazon Delivery DAB4 to the west.

The project site currently sits vacant and consists primarily of wooded areas, grassed areas, an existing asphalt and gravel driveway, and several wetland areas. The proposed project consists of the construction of a 3.2 million square-foot e-commerce logistics, storage and distribution facility. The footprint of the building will be approximately 652,000 square-feet and will feature 5 stories, at approximately 103.5 feet in height. The current layout provides for three (3) driveways to NYS Route 5S, associated drive aisles throughout the project site, parking for cars and trailers, trailer loading docks, utilities, signage, lighting, landscaping and stormwater management facilities.

In 2019, the site received Site Plan Approval and a Special Use Permit from the Town of Florida Planning Board for a 1-million square-foot warehouse/distribution center. The approved project included two (2) driveway entrances from NYS Route 5S, associated on-site roadways, parking, utility infrastructure, landscaping and stormwater management facilities.

3) WATER DISTRIBUTION SYSTEM

a) Projected Water Demand

The water usage rate for the proposed distribution warehouse is 30 gpd/employee. Per the applicant, the average number of employees per day is 2,160. Calculations were performed by Jordan & Skala Engineers, and are included in Appendix C. See the calculation below:

[(30 gpd/employee) x (2,160 employees)] = 64,800 gpd (gallons per day)

Monthly usage = 1,944,000 gallons per month

The project peak flow is as follows:

(64,800 gpd ÷ 24 hours ÷ 60 minutes) x 7.5 peak flow factor = 340 gpm (gallons per minute)

Per the Will-Serve Letter and response by the Town of Florida included in Appendix C, The Town water main has the capacity to handle the water service demands for the project as outlined in this section.

b) Proposed Distribution System

Water Distribution System

The Town of Florida will provide water service to the proposed project via connection to an existing 10” ductile iron pipe located along NYS Route 5S. A flow test was conducted on hydrants located along the main on Route 5S on March 5, 2025 by Harrington Group, the fire protection engineer for the project. Results of the flow test are included in Appendix D. Additionally, two (2) 360,000 gallon water storage tanks and fire pump houses are required for this project.

The proposed water distribution system will tap into the existing 10” ductile iron water main as shown on the Utility Plans, prepared by Bohler, dated April 24, 2025. The service is proposed to connect to the existing 10” pipe at a location east of the Target access driveway across NYS Route5S. The service will extend into the proposed project site to a heated enclosure containing a backflow preventer and water meter and continue to run throughout the site. This connection will provide water service needs to the proposed 360,000-gallon water tanks, warehouse, and guardhouses.

The proposed water distribution system will consist of ±2,210 linear feet of 10” diameter C900 water service pipe and has been designed in accordance with the requirements of the Ten States Recommended Standards for Water Works, latest edition.

Fire Water Service

As described above, the proposed 10-inch water service will provide water supply to the two (2) 360,000-gallon water tanks. One tank is located at the northwestern corner of the proposed building, and the other is located to the east of the proposed building. From there, the tanks will then supply the fire suppression loop, which consists of ±4,590 linear feet of 10-inch diameter C900 water service pipe surrounding the proposed building. The fire riser laterals that lead into the building will then provide water service to the internal fire sprinkler system of the proposed warehouse. Nineteen (19) fire hydrants have been provided around the warehouse, including two

(2) city pressure hydrants located along the 10” C900 water tank fill lines prior to entering the water tanks. A 4-inch Storz fire department connection has also been provided at each water storage tank as required by the Town. The fire water service has been designed in accordance with the requirements of the Ten States Recommended Standards for Water Works, latest edition and pipe and appurtenances will conform to AWWA Standard C900, latest edition.

Where the proposed fire water service will be parallel to the sanitary sewer, a minimum horizontal separation distance of 10 feet (outer-wall to outer-wall) was maintained. Where proposed water line crosses sanitary sewer, a minimum vertical separation distance of 18 inches (outer-wall to outer-wall) was maintained.

Domestic Water Service

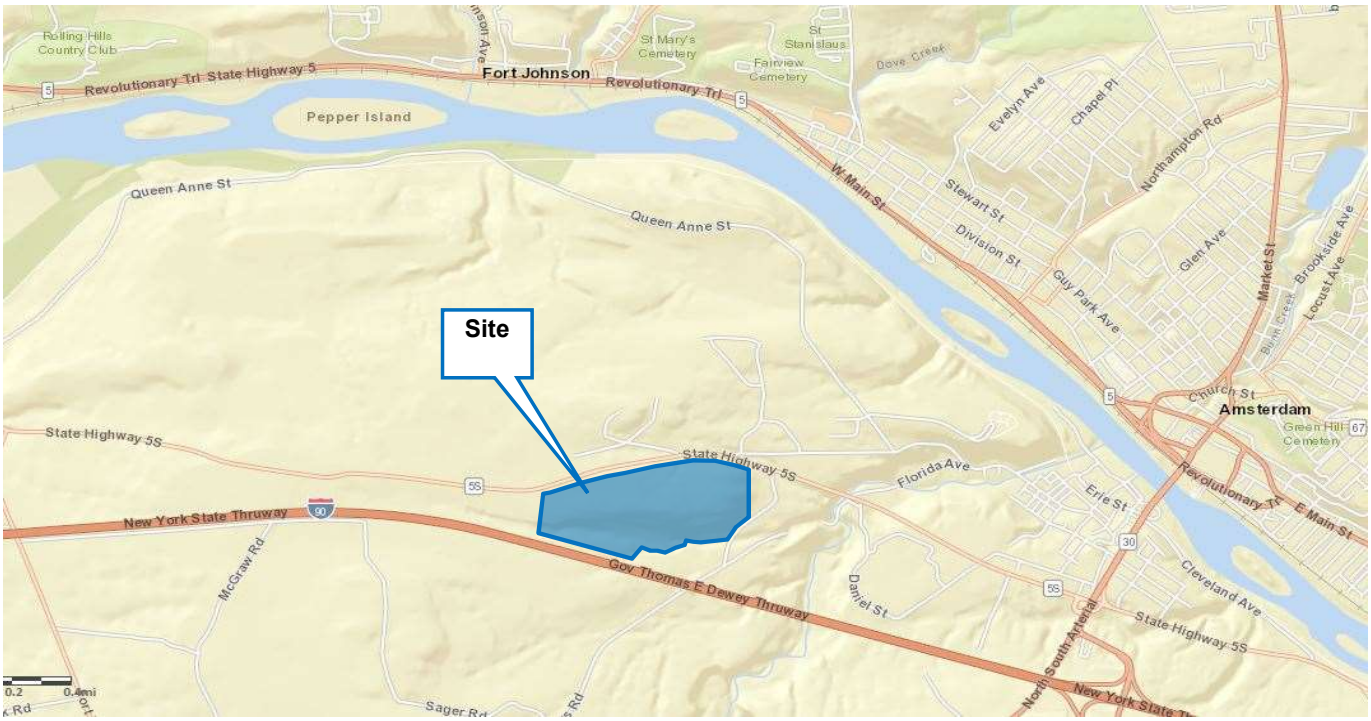
The proposed domestic water service will consist of ±255 linear feet of 6” diameter C900 water service pipe which will serve the proposed warehouse. A 2” diameter and 1.5” diameter Type K copper water service line will provide domestic water needs to the primary and secondary guardhouses. The domestic water service has been designed in accordance with the requirements of the Ten States Recommended Standards for Water Works, latest edition and pipe and appurtenances will conform to AWWA Standard C900, latest edition.

Where the proposed domestic water service will be parallel to the sanitary sewer or, a minimum horizontal separation distance of 10 feet (outer-wall to outer-wall) was maintained. Where proposed water line crosses sanitary sewer, a minimum vertical separation distance of 18 inches (outer-wall to outer-wall) was maintained.

c) Water Meter and Backflow Prevention Devices

A backflow preventer and water meter are proposed within a new heated enclosure located north of the water storage tank and pump house at the northeastern corner of the proposed building. The water line enters the site into a proposed heated enclosure with a backflow preventer and a water meter before continuing through the site to provide services to the warehouse, storage tanks and guardhouses. Per the New York State Department of Health Cross Connection Control Manual, the proposed warehouse is considered an aesthetically objectionable facility. In terms of use, toxicity, and availability of contaminants, the proposed warehouse will not contain any toxic chemicals, and the only potential hazard is the proposed water tank and external fire loop, which has the potential to cause stagnant water, and objectionable tastes and odors. In terms of availability of a supplementary water supply, there is no supplementary water supply for this project. In terms of firefighting system evaluation, the fire protection system is considered a Class 3 system, where the products associated with the warehouse building are made of wood, paper and natural fibers, requiring a double check valve at a minimum. Based on these three categories, a double check valve is required at a minimum.

d) Fire Suppression



Two (2) fire suppression tanks of approximately 360,000 gallons are proposed, located at the northwestern corner of the warehouse and along the east side of the warehouse. The fire suppression tanks will be fed from the 10-inch tank fill lines, which will provide water to the 10” fire suppression loop around the building.

4) TESTING

Prior to being placed into service, the water distribution system shall be tested in accordance with the testing procedures set forth by the Town of Florida and New York State, as required. A certification letter shall be provided to the Town of Florida once testing has been completed.

Attn: Steven Anderson
Highway Superintendent

Re: Request for Will Serve Letters
MSV1 – Amazon Warehouse/Distribution Facility
Route 5S and Mead Road, Town of Florida

Dear Mr. Anderson:

Our client, BMG Albany, LLC, proposes to construct build a new ±3.2 million square foot warehouse/distribution facility. The project consists of a ±652,000 SF footprint building with 5 stories, tractor/trailer parking and loading areas, automobile parking areas, three (3) driveways to Route 5S, stormwater management systems, lighting, landscaping, electric substation and water storage tank(s) as needed. We are writing to request verification that the Town will be able to provide water and sewer services to the site.

Water Usage
With an estimated employee count of 2,100 employees per day and average daily usage of 30 gpd (gallons per day), the estimated water demand for the proposed development is 34,800 gpd. Peak design flow is estimated at 340 gpm (gallons per minute).

Wastewater Generation
With an estimated employee count of 2,100 employees per day and average daily wastewater generation of 25 gpd (gallons per day), the estimated wastewater generation is 54,000 gpd. Peak design flow is estimated at 150 gpm (gallons per minute).

Attached please refer to the Utility Connection Exhibit, which provides proposed connection points for the water and sewer services.

Please advise if the water and sewer mains along Route 5S have the capacity to handle the project demands. Please also confirm the maximum capacity of the existing water and sewer mains. Further, please provide an estimate of any potential cost that may be associated with the water/sewer connections for the proposed development.

Should you have any questions or require any further information, please do not hesitate to contact our office at 518-461-8345 or at steven.wilson@bohlereng.com.

Sincerely,
BOHLER ENGINEERING NY, PLLC

ARS GEN 12 Domestic Water January 31, 2024

Domestic Water Load Summary

Domestic Water Service Size = 6” (includes future growth)

Peak Design Flow = 340 GPM

30 GPD/Employee (Average 2160 employees/day)

Daily usage = 64,800 GPD (Gallons per Day)

Monthly Usage = Approximately 1,944,000 Gallons

APPENDIX

Appendix A – Vicinity Map
Appendix B – Aerial Map
Appendix C – Will Serve Letter and Flow Calculations
Appendix D – Town of Florida Sewer Mapping
Appendix E – Overall Utility Plan
Appendix F – Partial Utility Plans

1) EXECUTIVE SUMMARY

This Sanitary Sewer System Engineer's Report has been prepared for the Applicant, BMG Albany, LLC, who is proposing to develop the ±137.2-acre property (Tax Map ID 54.-1-36) at Route 5S/Mead Road in the Town of Florida, Montgomery County, New York. The project, known as MSV1, consists of the construction of a ±3.2 million square foot (±652,000 SF footprint, 5 stories) warehouse facility with associated car and trailer parking, trailer loading docks, stormwater basins, site utilities, signage, lighting and landscaping.

The sanitary sewer portion of the project involves:

- Installation of ±55 linear feet of 4" diameter PVC gravity service
- Installation of ±720 linear feet of 6" diameter PVC gravity service
- Installation of ±2,475 linear feet of 8" diameter PVC gravity service
- Installation of ±1,330 linear feet of 2" diameter force main
- Installation of one (1) pump station
- Installation of twenty (20) cleanouts
- Installation of seven (7) pressure relief valves
- Installation of four (4) 48" diameter manholes
- Installation of four (4) 60" diameter manholes
- Installation of two (2) 60" diameter drop manholes
- Installation of two (2) oil/water separators

2) PROJECT INFORMATION

The Applicant is proposing to develop a property in the Town of Florida, Montgomery County, New York (see Appendices A and B). The site is further designated as parcel 54.-1-36 and is approximately 137.2 acres. The project site is bounded by the Target Distribution Center and Beech-Nut Nutrition Company to the north across Route 5S, vacant land to the east, NYS Route 90 to the south, and the Amazon Delivery DAB4 to the west.

The project site currently sits vacant and consists primarily of wooded areas, grassed areas, an existing asphalt and gravel driveway, and several wetland areas. The proposed project consists of the construction of a 3.2 million square-foot e-commerce logistics, storage and distribution facility. The footprint of the building will be approximately 652,000 square-feet and will feature 5 stories, at approximately 103.5 feet in height. The current layout provides for three (3) driveways to NYS Route 5S, associated drive aisles throughout the project site, parking for cars and trailers, trailer loading docks, utilities, signage, lighting, landscaping and stormwater management facilities.

In 2019, the site received Site Plan Approval and a Special Use Permit from the Town of Florida Planning Board for a 1-million square-foot warehouse/distribution center. The approved project included two (2) driveway entrances from NYS Route 5S, associated on-site roadways, parking, utility infrastructure, landscaping and stormwater management facilities.

3) SANITARY SEWER SYSTEM

a) Projected Wastewater Flow

The New York State Department of Environmental Conservation's (NYSDEC) *New York State Design Standards for Intermediate Sized Wastewater Treatment Systems,* 2014 per-unit hydraulic loading rates in table B-3 were used to project the anticipated wastewater flow from the project. The per-unit hydraulic loading rate for a distribution warehouse is 15 gpd/employee/shift, plus 10 gpd/employee/shift to include showers. Calculations were performed by Jordan & Skala Engineers, and are included in Appendix C. Per the applicant, the average number of employees per day is 2,160. Please see the calculation below:

[(15+10 gpd/employee) x (2,160 employees)] = 54,000 gpd (gallons per day)

Monthly usage = 1,620,000 gallons per month

The project peak flow is as follows:

(54,000 gpd ÷ 24 hours ÷ 60 minutes) x 4 peak flow factor = 150 gpm (gallons per minute)

Per the Will-Serve Letter and response by the Town of Florida included in Appendix C, The Town sewer main has the capacity to handle the sanitary service demands for the project as outlined in this section.

b) Proposed Collection System

The proposed sanitary sewer collection system will consist of ±55 linear feet of 4" diameter PVC gravity service, ±720 linear feet of 6" diameter PVC gravity service, ±2,475 linear feet of 8" PVC gravity service, ±1,330 linear feet of 2" diameter force main, one (1) pump station, twenty (20) cleanouts, seven (7) pressure relief valves, four (4) 48" diameter manholes, four (4) 60" diameter manholes, four (4) 60" diameter drop manholes and two (2) oil/water separators. The proposed collection system has been designed in accordance with the requirements of the New York State Department of Environmental Conservation's (NYSDEC) *New York State Design Standards for Intermediate Sized Wastewater Treatment Systems, 2014,* and the *Ten States Recommended Standards for Wastewater Facilities,* latest edition.

The sanitary sewer conveyance system is proposed to make two separate connections to the existing service within NYS Route 5S. The existing sanitary mains located along NYS Route 5S are 12" diameter pipes. One connection is proposed to be made to the existing manhole SN26 on the project side of NYS Route 5S and the other connection is proposed to be made to the existing sanitary manhole SN28, on the opposite side of NYS Route 5S. As the road is proposed to be modified, a new trench is anticipated to be made for the crossing of NYS Route 5S. To make the connections, the contractor shall core-drill an opening into the existing manholes as show on the proposed development plans. Coordination and permitting with the Town of Florida and other local agencies will be necessary.

Where the proposed sanitary sewer gravity services will be in parallel with the water services, a minimum horizontal separation of 10 feet (wall to wall) is maintained. Where the proposed sanitary sewer gravity services will cross the water services or the storm sewer services, a minimum vertical

separation of 18-inches (wall to wall) shall be maintained. Where this minimum vertical separation is unattainable, a minimum vertical separation of 6 inches shall be maintained and the pipes are to be concrete encased. The sanitary manholes will be precast concrete and have a minimum inside diameter of 48 inches if the manhole is less than 10 feet deep and 60 inches if the manhole is greater than 10 feet deep.

c) Pipe Capacity Analysis

The proposed sanitary sewer gravity mains have been analyzed to ensure that proper pipe capacity has been provided. The flattest proposed pipe with the highest design flow was analyzed. The pipe condition will provide the least amount of capacity on the system and is considered the "worst case scenario".

The flattest proposed pipe with the highest design flow is located between SMH-5 and SMH-6. The pipe has an 8-inch diameter and is sloped at 0.75%. The peak flow rate through this section of pipe is 150 gpm, which is equivalent to 0.34 cfs. The design capacity of the pipe, flowing full, is as follows:

$$Q = A \times 1.486/n \times R^{2/3} \times S^{1/2}$$

Q = volumetric flow rate (cfs)

n = Manning's Roughness Coefficient (0.013 for PVC)

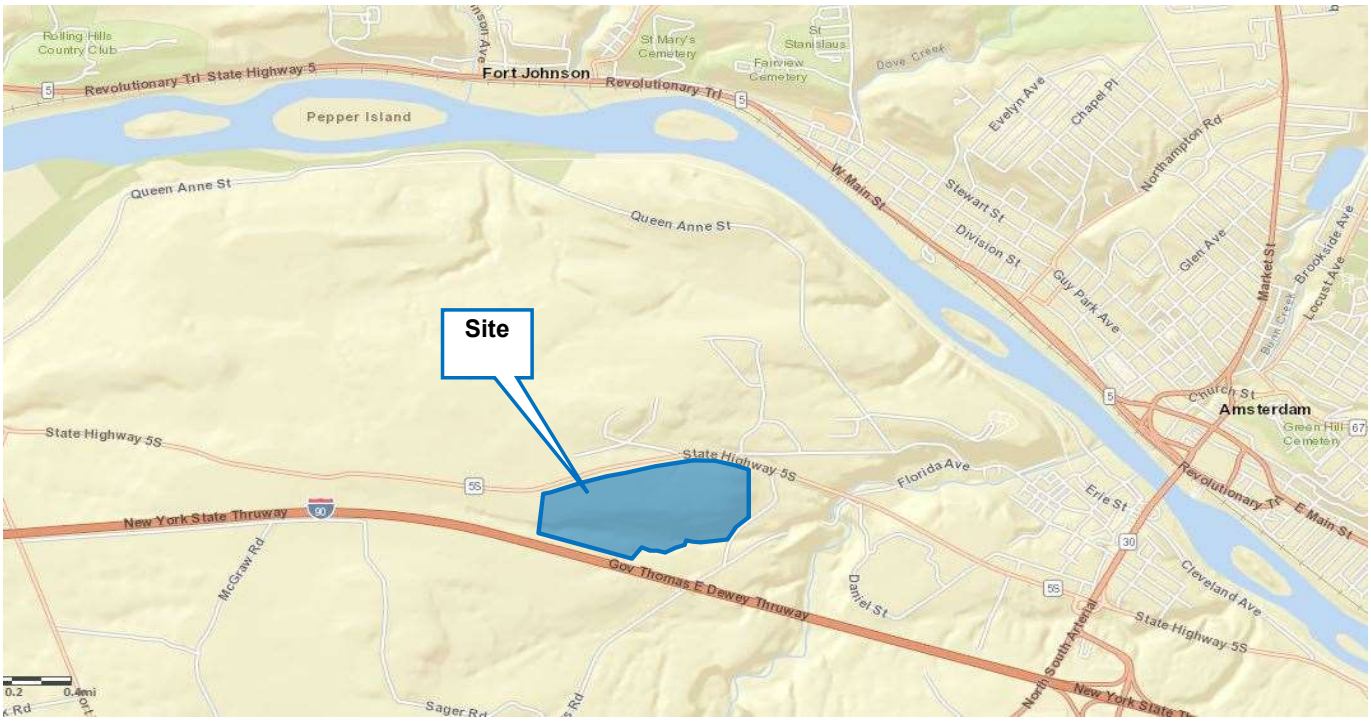
A = cross-sectional area (0.35 ft^2)

P = wetted perimeter (2.09 ft)

R = hydraulic radius (A/P) (0.17 ft)

S = slope of pipe (0.0075 ft/ft)

$$Q = (0.35\ ft^2) \times (1.486/0.013) \times 0.17\ ft^{2/3} \times 0.0075^{1/2} = \mathbf{1.06\ cfs}$$



The peak design flow is approximately 30% of the capacity of the proposed pipe. Given that this is the flattest sloping pipe with the highest design flow, it can be assumed that all other pipes within the project will be capable of conveying the anticipated peak flow rate as well.

4) TESTING

Prior to being placed into service, the sanitary sewer system shall be tested in accordance with the testing procedures set forth by the Town of Florida and New York State, as required. A certification letter shall be provided to the Town of Florida and NYSDEC once testing has been completed. Additionally, testing results shall be included in the Certificate of Construction Compliance to be sent to the New York State Department of Health prior to the issuance of a permit to operate.

Re: Request for Will Serve Letters
MSV1 – Amazon Warehouse/Distribution Facility
Route 5S and Mead Road, Town of Florida

Dear Mr. Anderson:

Our client, BMG Albany, LLC, proposes to construct build a new ±3.2 million square foot warehouse/distribution facility. The project consists of a ±652,000 SF footprint building with 5 stories, tractor/trailer parking and loading areas, automobile parking areas, three (3) driveways to Route 5S, stormwater management systems, lighting, landscaping, electric substation and water storage tank(s) as needed. We are writing to request verification that the Town will be able to provide water and sewer services to the site.

Water Usage
With an estimated employee count of 2,100 employees per day and average daily usage of 30 gpd (gallons per day), the estimated water demand for the proposed development is 34,800 gpd. Peak design flow is estimated at 340 gpm (gallons per minute).

Wastewater Generation
With an estimated employee count of 2,100 employees per day and average daily wastewater generation of 25 gpd (gallons per day), the estimated wastewater generation is 54,000 gpd. Peak design flow is estimated at 150 gpm (gallons per minute).

Attached please refer to the Utility Connection Exhibit, which provides proposed connection points for the water and sewer services.

Please advise if the water and sewer mains along Route 5S have the capacity to handle the project demands. Please also confirm the maximum capacity of the existing water and sewer mains. Further, please provide an estimate of any potential cost that may be associated with the water/sewer connections for the proposed development.

Should you have any questions or require any further information, please do not hesitate to contact our office at 518-461-8345 or at steven.wilson@bohlereng.com.

Sincerely,
BOHLER ENGINEERING NY, PLLC

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) completed a Phase I Environmental Site Assessment (ESA) of the MSV1 property located at State Highway 5S in Florida, Montgomery County, New York (the "subject property") under the written authorization of Amazon.com Services LLC (Amazon, "Client" and the "user").

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. Amazon has requested this ESA as part of their environmental due diligence in advance of their proposed lease or purchase of the subject property for use as a distribution facility.

Subject Property Layout

The approximately 137-acre subject property is currently vacant and consists of wooded land and former agricultural fields with unpaved access roads and several surface water features. The surface water features include two mapped freshwater ponds (one each in the northwestern and southeastern parts of the subject property) and an unnamed tributary of North Chuctanunda Creek (transects the southern part of the subject property in an approximate east-west orientation).

Subject Property Current Use

The subject property is currently vacant, undeveloped land. Miscellaneous waste (e.g., two 5-gallon propane tanks (metal), one 55-gallon polyethylene drum with unknown contents, a plow blade, polyvinyl chloride (PVC) pipes, refrigerators, bathtubs, sinks, metal framing, couches, automobile frames, mattress frames, tires, washing machines) were scattered and/or stockpiled at the subject property.

Subject Property History

The subject property was undeveloped and/or agricultural land since the 1890s and included residential structures in the northwestern part of the subject property in 1895 that were demolished by 1931. The northwestern part of the subject property was developed with two residential structures with basements, garages for parking, and sheds/lean-tos between 1989 and 1999 and a farm stand operated in the northern part of the subject property from 1999 to the mid-2000s. The residences were occupied until 2021 and the subject property buildings were demolished in January 2022. According to previous reports, Winstanley Enterprises purchased the subject property in 2021 and is the current owner.

Conclusions

Langan completed a Phase I ESA of the subject property using the scope guidelines and inherent limitations of ASTM E1527-21. Table ES-1 presents the conclusions of the Phase I ESA.

Table ES-1 Conclusions, Findings and Opinions

Recognized Environmental Conditions (REC)
Langan did not identify RECs.
Controlled Recognized Environmental Conditions (CREC)
Langan did not identify CRECs.

Historical Recognized Environmental Conditions (HREC)
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
Langan did not identify significant data gaps.

1. INTRODUCTION

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C (Langan) completed a Phase I Environmental Site Assessment (ESA) of the MSV1 property located at State Highway 5S (NY-5S) in Florida, Montgomery County, New York (the "subject property") under the written authorization of Amazon.com Services LLC (Amazon, the "Client" and the "user"). A Subject Property Location Map is provided in Appendix A (Figure 1).

The Phase I ESA was completed following the guidelines of ASTM International Standard Practice E1527-21 (ASTM E1527-21), the United States Environmental Protection Agency's (US EPA) All Appropriate Inquiries (AAI) Rule, and industry standard practice. Amazon has requested this ESA as part of their environmental due diligence in advance of their proposed lease or purchase of the subject property for use as a distribution facility.

1.1 Purpose

The purpose of this Phase I ESA is to identify recognized environmental conditions (REC) associated with the subject property. This purpose also includes identifying controlled recognized environmental conditions (CREC), historical recognized environmental conditions (HREC), de minimis conditions, and significant data gaps. The definitions of REC, CREC, HREC, de minimis condition and other select ASTM terms used in this report are in Section 8.

1.2 Scope of Services

Langan's scope of services consisted of the completion of a Phase I ESA following the guidelines of ASTM E1527-21. Langan's scope of services as it pertains to the elements of a Phase I ESA as specified in ASTM E1527-21 is described below.

On 8 July 2024, the US EPA final rule designating two per- and polyfluoroalkyl substances (PFAS) – perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) including their salts and structural isomers – as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) became effective. Because of the complex and varied historical use of PFAS in various industries; limited prior disclosures of PFAS content on product specification sheets, Material Safety Data Sheets, and Safety Data Sheets; the complex chemistry and chemical transformations associated with some PFAS; and the ever-growing and varied list of state regulations, it is not feasible to evaluate PFOA and PFOS without also considering other PFAS. As such, absent analytical data, Langan incorporated a review of PFAS as a general class into this Phase I ESA.

PFAS and other CERCLA hazardous substances and petroleum products have been detected in background environmental samples across the globe, including in areas removed from specific recognized sources. This Phase I ESA was not intended to evaluate background concentrations of CERCLA hazardous substances or petroleum products, regardless of whether the source is naturally occurring or anthropogenic. The objective of Langan's scope of services was to identify the presence, likely presence, and/or material threat of a release of CERCLA hazardous substances and petroleum products related to specific property uses that are generally recognized as known or potential sources of such substances and products.

1.2.1 Records Review and Local Government Interviews

Langan contracted a third-party provider to search environmental regulatory databases and provide historical records. The database search included select federal, state, local and tribal standard source environmental databases within the approximate search radii specified by ASTM E1527-21.

Langan submitted Freedom of Information Act (FOIA) requests to supplement environmental database listing information. The FOIA requests were submitted to the New York State Department of Health, the New York State Department of Environmental Conservation (NYSDEC), and Town of Florida. Langan also reviewed online records including the Federal Emergency Management Agency Flood Map database; United States Fish and Wildlife Services National Wetlands Inventory (NWI); United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey; United States Geological Survey (USGS) mapping; and US EPA databases. Agency FOIA-requested information, where received, is discussed in relevant sections of this report and referenced in Section 7. Pertinent documents are provided in Appendix E.

Langan supplemented the third-party-provided historical records with review of online historical record sources including Google Earth Pro.

1.2.2 Site Reconnaissance and Owner/Operator/Occupant Interviews

Shawn Martin of Langan completed the site reconnaissance on 9 December 2024. Sean Baggett (Bluewater Property Group; the "key site manager") arranged access for Mr. Martin, who was unaccompanied during the site reconnaissance. The site reconnaissance focused on the spatial extent of the subject property and associated structures and progressed to the adjoining and surrounding properties. The adjoining properties were observed from the subject property or from public rights-of-way. The weather at the time of the site reconnaissance was approximately 36°F and overcast. Limiting conditions encountered during the site reconnaissance, if any, are discussed in Section 8.3.

Langan interviewed Mr. Baggett via email on 4 and 19 December 2024.

1.2.3 Evaluation, Report and Parts Used in Concert

Langan evaluated the pieces of information obtained from the records reviews, site reconnaissance and interviews described above, and from the user as described in Section 1.3 in concert with each other. Langan's findings, opinions, and conclusions are discussed throughout this report. Significant assumptions, or deletions, deviations or exceptions to ASTM E1527-21 are noted in Section 8.3.

1.2.4 Non-ASTM Scope Services

The scope of services for the Phase I ESA included the following non-scope considerations: wetlands and floodplains (Section 2.10.1); naturally occurring radon (Section 2.10.2); and asbestos-containing material (ACM), lead-containing paint (LCP), polychlorinated biphenyls (PCB) and mold (Section 2.10.3).

1.3 User Responsibilities

Langan requested that the user provide the results of tasks the user is responsible for completing

to satisfy the requirements of AAI. The tasks include: searching for known environmental liens and activity and use limitations (AUL) filed or recorded against the subject property, and provision of information related to specialized knowledge or experience of the user or the degree of obviousness relative to conditions indicative of releases or threatened releases; actual knowledge of the user regarding environmental liens or AULs related to the subject property; specialized knowledge or experience of the user; reasons for significantly lower purchase prices, and commonly known or reasonably ascertainable information within the local community about the subject property. Langan also requested that the user state the reason the Phase I ESA was requested.

Unless specifically included in the scope of services, Langan did not complete a title search or a search for environmental liens or AULs, as that is the responsibility of the user. If the user requested that Langan complete such searches on the user's behalf, the information was supplied to Langan by a vendor, and to the vendor by government sources; therefore, neither Langan nor the vendor can verify the completeness or accuracy of the title search, or AUL searches.

Relevant information provided by the user is included in Appendix B and is discussed in applicable sections of this report. To date, a completed questionnaire has not been provided to Langan; however, Tracey Schwartz, Principal – EHS Due Diligence and Remediation of Amazon indicated that she does not have specialized knowledge of environmental conditions on the subject property.

2. SUBJECT PROPERTY DESCRIPTION AND CURRENT USE

The following sections describe the subject property location, ownership, physical setting, and current layout and operations.

2.1 Location, Legal Description, and Ownership

The approximately 137-acre subject property is located approximately 500 feet northwest of the intersection of Snooks Corners Road and Meade Road. The subject property is identified as Montgomery County Parcel 54.-1-36. The subject property was formerly comprised of the following Montgomery County Parcels and addresses:

Parcels	Address
54.-1-35.11	State Highway 5S
54.-1-35.121	State Highway 5S
54.-1-35.131	1711 State Highway 5S
54.-1-35.141	State Highway 5S
54.-1-35.151	1733 State Highway 5S
54.-1-35.161	State Highway 5S
54.-1-36	State Highway 5S
54.-1-37	State Highway 5S
55.-1-1.1 (portion)	176 Mead Road
55.-2-4.1 (portion)	State Highway 5S

Based on the Map Showing Overall Merged Parcel prepared by LRC Group, dated 22 April 2019 (Section 3.3), the above-listed parcels were merged into the current Parcel 54.-1-36 in 2021. A

legal description of the subject property was not reasonably ascertainable. The subject property is owned by Winstanley Enterprises.

2.2 Physical Setting

The physical setting that includes the geologic, hydrogeologic, hydrologic, and topographic characteristics of the subject property and surrounding area are discussed below.

2.2.1 Topography

The 2019 USGS 7.5-minute topographic quadrangle map for Amsterdam, New York depicts the subject property at elevations ranging from approximately 450 to 550 feet above mean seal level. Based on the Land Title Survey prepared by LRC Group, dated 15 July 2021 (Section 3.3), the subject property grade varies between elevation (el.) 450 in the southeastern part of the subject property and el. 556 in the central part of the subject property. Elevations are with respect to the North American Vertical Datum of 1988 (NAVD88). Based on subject property observations, the topographic quadrangle map, and previous reports, the northern and southern parts of the subject property slope downward to an unnamed tributary of North Chuctanunda Creek in the southern part of the subject property, and the northeastern part of the subject property slopes downward to the northeast.

2.2.2 Geology

According to the USDA NRCS Soil Survey Geographic data for Montgomery County, soils at the subject property are comprised of Appleton silt loam with 3 to 8 percent slopes, palatine silt loam with 15 to 25 percent slopes and palatine silt loam with 3 to 8 percent slopes. These soils are classified primarily as poorly-drained silty gravelly loams.

According to the "Geologic Map of New York, Hudson Mohawk Sheet (Fisher, Isachsen, Rickard, dated March 1970)", the subject property is underlain by bedrock within the Lorraine, Trenton, and Black River groups consisting of Middle Ordovician-aged Canajoharie shale. The Canajoharie Shale consists of black shale.

Based on previous investigations (Section 3.3), subsurface stratigraphy at the subject property consists of a surficial topsoil layer underlain by clay, silt, sand, and gravel overlying natural glacial till, which is underlain by shallow shale bedrock. An about 2-foot-thick fill layer was encountered in one soil boring in the western part of the subject property. The fill predominantly consists of clayey sand with gravel and anthropogenic materials (geotextile fabric). Weathered bedrock was encountered at depths between about 1 and 20 feet below grade surface (bgs) and bedrock was encountered between 1 and 12 feet bgs.

According to the Homeland Infrastructure Foundation Level Database, the subject property does not fall within an oil and gas field. The Environmental Data Resources (EDR) report did not identify any oil or gas wells within one mile of the subject property. No injection wells were identified within a quarter mile of the subject property.

2.2.3 Hydrogeology

The closest surface water body is an unnamed tributary of North Chuctanunda Creek, which runs in an approximate east-west orientation through the southern part of the subject property, and two mapped freshwater ponds, one each in the northwestern and southeastern parts of the

subject property (Figure 1). The unnamed tributary flows from west to east towards the North Chuctanunda, which is located about 1,000 feet east of the subject property.

Information regarding subject property-specific groundwater flow direction is unavailable. Groundwater flow can be influenced by several factors such as surface water bodies, wetlands, hydrogeologic and anthropogenic variables. Based on the local topography and proximity to nearby surface water features, the inferred regional groundwater flow direction at the subject property is to the east-southeast, towards North Chuctanunda Creek. Based on the local topography and proximity to nearby surface water features, the inferred groundwater flow direction at the subject property may be variable: inferred groundwater flow in the northern part of the subject property to the south-southeast; and inferred groundwater flow in the southern part of the subject property to the northeast. Based on previous investigations (Section 3.3), groundwater was encountered at depths ranging from about 1 to 14 feet bgs.

A review of the GeoCheck section of the EDR Regulatory Database Report (Appendix C) and site reconnaissance observations did not identify groundwater monitoring wells on the subject property. The EDR report identified six monitoring wells within one mile of the subject property. The available well logs indicated that regional groundwater depth within one mile of the subject property ranges from about 103 to 111 feet bgs.

2.3 Subject Property Description

The approximately 137-acre subject property is currently vacant and consists of wooded land and former agricultural fields with unpaved access roads and several surface water features. The surface water features include two mapped freshwater ponds (one each in the northwestern and southeastern parts of the subject property) and a tributary of North Chuctanunda Creek (transects the southern part of the subject property in an approximate east-west orientation).

A Subject Property Layout Map is provided in Figure 2 of Appendix A. Photographs of the subject property and a checklist documenting Langan's observations relative to the features, activities, uses and conditions outlined in Section 9.4 of ASTM E1527-21 are in Appendix D.

2.4 Current Subject Property Use

The subject property is vacant and consists of wooded land in the northern, western, and southern parts of the subject property, and former agricultural fields in the central and eastern parts of the subject property.

The northwestern part of the subject property was most recently developed with two residential structures with basements, garages for parking, sheds/lean-tos, and a farm stand, which were in use from 1999 to the mid-2000s. The residences were occupied until 2021 and the subject property buildings were demolished in January 2022.

The following table summarizes subject property utility providers.

Table 2-1 Utility Providers

Utility	Providers
Electricity (not active)	National Grid (provider to the area)
Natural gas (not active)	National Grid (provider to the area)
Water (not active)	Town of Florida Water District (provider to the area)

Utility	Providers
Sewer (not active)	Town of Florida Sewer District (provider to the area); the former residences were serviced by septic systems that included tanks and leach fields. According to previous reports (Section 3.3), the septic tanks were removed in January 2022; however, the leach fields were left in place (Section 3.1).

2.5 Hazardous Substances and Petroleum Products

Langan did not observe hazardous substances or petroleum product storage or use at the subject property. Langan did not observe evidence of leaks, spills, pools of liquid or releases such as staining, or sheens at the subject property.

2.5.1 Underground Storage Tanks (UST)

The EDR database report did not identify USTs at the subject property, and Langan did not observe evidence of USTs at the subject property.

2.5.2 Aboveground Storage Tanks (AST)

The NYSDEC Petroleum Bulk Storage (PBS) database listing for Site No. 4-600621 and the EDR database report identify the following closed-removed ASTs in connection with the subject property: one 3,000-gallon AST (Tank 1, diesel storage, steel, installed in 1998, closed/removed in 2001) and one 300-gallon AST (Tank 2, gasoline storage, steel, installation date not provided, closed/removed in 2001). Based on a review of previous reports (Section 3.3), the PBS database and EDR database report listings pertain to the south-adjoining property and are not associated with the subject property. The off-site database details are discussed below in the subject property regulatory database review (Section 3.2).

Based on a review of previous reports (Section 3.3) the former residences at 1711 and 1733 NY-5S in the northern part of the subject property each had one AST within their respective basements. According to previous reports, the ASTs were removed during building demolition in January 2022; however, tank removal documentation was not provided for review.

Because of the status of the tanks and lack of documented violations or releases, the PBS listing and historical petroleum bulk storage are not considered a REC.

2.5.3 Drums, Totes, and Intermediate Bulk Containers

Langan observed one 55-gallon polyethylene drum with no visible labels or markings and unknown contents in the western part of the subject property. Due to snow cover, Langan was unable to observe the surrounding ground surface for indications of staining or stressed vegetation.

2.5.4 Other Chemical Storage, Containers, or Equipment

Langan observed miscellaneous waste (e.g., two 5-gallon propane gas containers (metal), a plow blade, polyvinyl chloride [PVC] pipes, refrigerators, bathtubs, sinks, metal framing, couches, automobile frames, mattress frames, tires, washing machines) scattered and/or stockpiled in the western part of the subject property. The propane tanks did not have visible labels or markings and had visible signs of rusting and corrosion. The origin of these waste materials is unknown.

Due to snow cover, Langan was unable to observe the surrounding ground surface for indications of staining or stressed vegetation.

2.6 Air Emissions

Langan did not observe sources of air emissions at the subject property.

2.7 Waste Management

The following sections describe current hazardous and non-hazardous waste streams, and observations of fill areas or other solid waste throughout the subject property.

2.7.1 Hazardous Waste

According to EDR database records, hazardous waste is not being generated at the subject property. Langan did not observe hazardous waste at the subject property.

2.7.2 Non-Hazardous Waste

According to EDR database records, non-hazardous waste is not being generated at the subject property. Langan did not observe non-hazardous waste at the subject property.

2.7.3 Fill Areas or Solid Waste

Langan observed miscellaneous waste (e.g., a plow blade, PVC pipes, refrigerators, bathtubs, sinks, metal framing, couches, automobile frames, mattress frames, tires, washing machines) scattered and/or stockpiled at the subject property. The origin of these waste materials is unknown. No visible indications of filling, grading, or earthwork were observed at the subject property. According to the key site manager, no earthwork has occurred at the subject property since at least 2022.

2.8 Wastewater

Langan did not observe or identify evidence of septic systems or cesspools at the subject property.

2.9 Storm Water

Storm water at the subject property percolates through pervious areas or sheet flows to the adjoining roadways into the municipal storm sewer system.

Langan observed several municipal stormwater access manholes along the northern boundary of the subject property, adjacent to NY-5S.

2.10 Non-Scope Considerations

2.10.1 Wetlands and Floodplains

According to EDR Regulatory Database Report (Appendix C), the NWI, and prior report review (Section 3.3), there are 10 wetland areas at the subject property totaling approximately 12.5 acres. The wetland areas include two freshwater ponds, one each in the northwestern and southeastern parts of the subject property, and an unnamed tributary running in an approximate east-west orientation in the southern part of the subject property (unnamed tributary of North

Chuctanunda Creek). Wetland areas are shown on Figures 2A and 2B. The subject property is not located within a flood zone as shown on Figures 2A, 2B, and 3.

2.10.2 Naturally Occurring Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. Radon can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

According to Federal Area Radon information provided by EDR, Montgomery County is a Radon Zone 2 (indoor average greater than 2 picocuries per liter [pCi/L] and less than 4 pCi/L) and all of living areas of the 26 sites tested in Montgomery County had readings less than 4 pCi/L. Approximately 81 percent of basements tested had readings less than 4pCi/L and approximately 19 percent had readings between 4 and 20 pCi/L. The average result from 26 tests conducted within Montgomery County in Amsterdam was 0.820 pCi/L and 2.020 pCi/L for first floor living areas and basements, respectively. The US EPA recommends indoor air radon levels should be less than 4 pCi/L. Based on available information, there is the potential for elevated radon levels at the subject property.

2.10.3 ACM, LCP, PCBs and Mold

A formal survey to identify ACM, LCP, PCB-containing material, and/or mold was not conducted as part of this Phase I ESA. There are no buildings at the subject property. Based on the prior report review (Section 3.3), a hazardous building materials (HBM) survey report was prepared for the former subject property buildings. No ACM, LCP, or PCB-containing materials were identified based on a review of the HBM survey. A formal survey to identify mold was not conducted as part of this Phase I ESA. Because there are no buildings at the subject property, it is considered unlikely that mold is present.

3. SUBJECT PROPERTY HISTORY AND RECORDS REVIEW

The following sections provide summaries of the historical uses of the subject property, and available information regarding documented environmental conditions associated with the historical uses.

3.1 Historical Summary

Langan compiled the following summary of the subject property history based on a review of readily available and reasonably ascertainable sources and interviews. Historical resources are provided in Appendix F.

Table 3-1 Subject Property History

Time Period	Historical Discussion
1895 – 1930s	The subject property was undeveloped land with a road (South Amsterdam – Fort Hunter Road) that transected the northern part of the subject property, two structures, and a stream that transected the southern part of the subject property in an east-west orientation (USGS Topographic Maps). In the 1895 USGS Topographic Map, the apparent slope of the subject property sloped downward

Time Period	Historical Discussion
	from west to east, and by 1931, the northern part of the subject property is depicted as generally level (USGS Topographic Maps).
1940s – 2020s	In 1942, the subject property appears largely undeveloped with agricultural fields (Aerial Photographs). By 1947, the road in the northern part of the subject property was no longer present (USGS Topographic Maps). The freshwater pond in the southeastern part of the subject property first appears in the 1957 Aerial Photograph. A 10-inch natural gas transmission line was installed in the eastern part of the subject property in the 1970s (Section 3.3). Two residential structures with basements, septic systems, heating oil ASTs, garages for parking, and two sheds/lean-tos were developed in the northern part of the subject property between 1989 and 1999, and the remaining parts of the subject property were agricultural and wooded land (Section 3.3 and Aerial Photographs). A farm stand was developed in the northern part of the subject property and operated at the subject property from 1999 to the mid-2000s (Section 3.3). By 2006, a second pond was present in the northwestern part of the subject property (Google Earth Imagery). The subject property appears relatively unchanged through 2018 (Aerial Photographs and Google Earth Imagery). According to prior report review (Section 3.3), the structures, ASTs, septic tanks, and five water wells at the subject property were demolished/removed in January 2022; however, the leach fields were left in place (Section 3.3).
2022 – Present	According to prior report review (Section 3.3) and the Town of Florida Tax Assessors Office, Winstanley Enterprises owns the subject property. An easement for the American Telephone & Telegraph transects the southern part of the subject property in an approximate east-west direction and the subject property is subject to an easement granted to the Niagara Mohawk Power Corporation for the Niagara Mohawk natural gas pipeline in the western part of the subject property (Section 3.3). The subject property is in a C-2 commercial/light industrial zoning district designated for gas stations, dry cleaners, warehouses, printing, research and development centers, retail stores, carwashes, hotels, and restaurants (Town of Florida Zoning Map, 2016). Based on our review of the above historical references, the subject property has been used for agricultural purposes from at least 1942 to 2022. There is no reported, or known, utilization of municipal biosolids as fertilizer at the subject property. Based on prior reports review (Section 3.3), pesticides and herbicides were not detected in soil at elevated concentrations and historical agricultural use is not considered a REC. A natural gas transmission line with an easement runs through the eastern part of the subject property in an approximate north-south orientation. The former residences were served by water wells and an on-site septic system that included tanks and leach fields. According to the prior report review (Section 3.3), the water wells were decommissioned and the septic tanks at the subject property were removed in January 2022; however, the leach fields were left in place.

Environmental concerns related to historical operations are discussed further in Section 3.3.

3.2 Regulatory Database Review

The subject property is identified on the PBS AST database. The PBS AST listing is associated with PBS Site No. 4-600621 and details two closed and removed ASTs in connection with the

subject property. As detailed in Section 2.5.2, previous reports indicate that the PBS database and EDR database report listings pertain to the south-adjoining property and are not associated with the subject property.

3.3 Prior Report Review

Langan was provided with prior reports. The reports are referenced in Section 7, copies are provided in Appendix B and summarized below.

The following environmental reports were available for review and are provided in Appendix D:

- 11 December 2018 Land Title Survey, prepared by LRC Group
- 28 January 2019 Hazardous Materials Survey Report, prepared by Terracon Consultants, Inc. (Terracon)
- 1 April 2019 Phase I ESA, prepared by Tetra Tech, Inc. (Tetra Tech)
- 24 April 2019 Phase II ESA, prepared by Tetra Tech
- 26 August 2019 Report of Geotechnical Investigation, prepared by Whitestone Associates, Inc. (Whitestone)
- 30 August 2019 Expanded Full Environmental Assessment Form (FEAF), prepared by Bohler Engineering (Bohler)
- 27 April 2022 Phase I ESA, prepared by Langan

In addition to the reports listed above, the User provided the following relevant reports completed at a nearby property:

- 24 October 2019 Phase I ESA for DAB4 – 1785 State Highway 5S, Amsterdam, NY, prepared by Langan
- 26 November 2019 Phase II ESA Summary for DAB4 - 1785 State Highway 5S, Amsterdam, NY, prepared by Langan
- 17 June 2024 Environmental Site Investigation Summary for DAB4 – 1785 State Highway 5S, Amsterdam, NY, prepared by Langan

Relevant information based on our review of the above-listed reports is summarized below. Many of the historical subject property features discussed below are shown in Figure 2B.

<u>28 January 2019 Hazardous Materials Survey Report, prepared by Terracon</u>

Terracon prepared an HBM survey on behalf of Winstanley Enterprises, LLC for five residential structures at the subject property to identify the presence/absence of ACM, LCP, and other potentially hazardous materials such as mercury-containing and PCB-containing equipment. The HBM survey identified the following:

- Based on laboratory analysis pertaining to the samples collected during the survey, no materials sampled at the Site were identified to contain asbestos.
- None of the paint chip samples were identified to contain detectable levels of lead.
- No suspect hazardous and regulated materials were observed by Terracon.

No ACM, LCP, or PCB-containing materials were identified based on a review of the HBM survey.

1 April 2019 Phase I ESA, prepared by Tetra Tech

Tetra Tech completed a Phase I ESA on behalf of Winstanley Enterprises, LLC for the subject property and the remainder of Parcel 55.-2-4.1 (off-site). At the time of Tetra Tech's site reconnaissance in November 2018, the subject property was occupied by two residences, each with one AST in the basement, a farm stand, vacant fields and crop lands, and undeveloped land. Tetra Tech did not identify RECs at the subject property. Tetra Tech identified the following de minimis conditions associated with the subject property:

- The residential structures in the northern part of the subject property each contain a 250-gallon AST in their respective basements. Tetra Tech observed oil staining on the concrete surface beneath the AST at 1733 NY-5S; however, no cracks to the subsurface, odors, or evidence of a release were observed. Tetra Tech identified the presence of the former AST with residual stored oil and residual staining on the concrete beneath the AST as a de minimis condition.

Tetra Tech recommended that the unused AST at the residential structure be decommissioned and removed from the subject property and that the stockpile of tires be removed from the subject property. According to Kenneth Grant, Senior Vice-President of Winstanley Enterprises (subject property owner), the ASTs at the subject property were removed in January 2022. Tank removal documentation was not provided for review.

24 April 2019 Phase II ESA, prepared by Tetra Tech

Tetra Tech conducted a Phase II ESA at the subject property in March 2019 to evaluate the environmental condition of soil at the subject property. The Phase II ESA included advancing 18 soil borings to 6 feet bgs and collecting soil samples for laboratory analysis of volatile organic compounds (VOC), polycyclic aromatic hydrocarbons (PAH), pesticides, herbicides, and Resource Conservation and Recovery Act (RCRA) metals. The soil sample analytical results were evaluated using NYSDEC Title 6 New York Codes, Rules, and Regulations (6 NYCRR) Part 375 Unrestricted Use (UU) Soil Cleanup Objectives (SCO). The Phase II ESA findings are summarized below:

- Soil at the subject property consisting of brown to gray silty clay topsoil and clay with some sand and gravel, traces of shale (apparent bedrock) was encountered from 4 to 6 feet bgs.
- No staining, odors, or photoionization detector field screening results were observed.
- PAHs, pesticides, and herbicides were not detected in the soil samples.
- One VOC, toluene, was detected, but at a concentration below the UU SCO.
- Six metals, arsenic, barium, cadmium, chromium, lead, and mercury, were detected, but at concentrations below the UU SCOs.

Langan's review of the reports prepared by Tetra Tech did not identify RECs.

26 August 2019 Report of Geotechnical Investigation, prepared by Whitestone

Whitestone conducted a geotechnical investigation at the subject property in July 2019, consisting of 48 soil borings and 8 test pits. The subsurface soil consisted of about 17 inches of topsoil followed by glacial till, typically consisting of brown silty sand with gravel to clayey sand

with gravel, cobbles, and boulders. One boring in the western part of the subject property included a layer of fill consisting of clayey sand with gravel, and anthropogenic materials (geotextile fabric) to a depth of about 2 feet bgs. Underlying the glacial till was black shale bedrock. Groundwater was encountered during the geotechnical investigation at depths ranging from 1 to 14 feet bgs.

30 August 2019 FEAF, prepared by Bohler

Bohler prepared an Expanded FEAF on behalf of the Town of Florida Planning board. The FEAF included an Overall Existing Conditions survey prepared by LRC Group, dated 11 December 2018 that details the wetland areas at the subject property. According to the survey, there are 10 wetland areas ranging between 0.02 and 6.30 acres at the subject property, totaling approximately 12.5 acres of wetlands.

27 April 2022 Phase I ESA, prepared by Langan

The 2022 Phase I ESA did not identify RECs in connection with the subject property.

West-Adjoining Property – DAB4 Langan Phase I ESA and Phase II ESA Summary for DAB4 - 1785 State Highway 5S, Amsterdam, NY

24 October 2019 Phase I ESA, prepared by Langan

Langan performed a Phase I ESA at this west-adjoining property in October 2019. The 2019 Phase I ESA identified two RECs in connection with the site. A 2014 spill incident involving the release of about 30-gallons of diesel fuel at the site was identified as a REC; however, the spill incident was closed in 2015. A former septic system at the site was also identified as a REC.

26 November 2019 Phase II ESA Summary, prepared by Langan

Langan performed a Phase II ESA at this west-adjoining property in November 2019. The investigation consisted of five sub-slab soil gas sampling points within the building interior. Sub-slab soil gas (SSGS) samples were analyzed for VOCs via US EPA Method TO-15. The Phase II ESA findings are summarized below:

The SSSG results were screened against the US EPA Vapor Intrusion Screening Level (VISL) Residential and Commercial/Industrial Criteria using a Target Cancer Risk of 1x10-6 and a Target Hazard Quotient of 1 (May 2020) and the mitigation screening levels per New York State Department of Health (NYSDOH) Soil Vapor/Indoor Air Decision Matrices (Matrix A, Matrix B, and Matrix C) provided in the October 2006 NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (updated in May 2017). The NYSDOH Decision Matrices address tetrachloroethene, trichloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, cis-1,2-dichloroethene, vinyl chloride, methylene chloride, and carbon tetrachloride. The matrix evaluation requires sub-slab and indoor air data and are used here for comparison purposes. Indoor air samples were not collected as part of the investigation; however, the matrices provide recommendations for monitoring and/or mitigation based on sub-slab soil gas concentrations. The findings are summarized below:

- Sub-slab soil gas samples did not have exceedances of the US EPA Commercial/Industrial VISLs or NYSDOH mitigation screening levels.
- Exceedances in sub-slab soil gas of the US EPA Residential VISL included chloroform.

17 June 2024 Environmental Site Investigation Summary, prepared by Langan

Langan performed an environmental site investigation at this west-adjoining property in June 2024. The investigation consisted of six soil borings and soil sample collection for laboratory analysis. Soil samples were analyzed for PCBs by US EPA Method 8082A, RCRA-list VOCs, SVOCs, pesticides, herbicides, and metals using the Toxic Characteristic Leaching Procedure (TCLP) in accordance with 40 Code of Federal Regulations Part 261.24, pH, ignitability, and cyanide and sulfide reactivity, and/or paint filter. The environmental site investigations findings are summarized below:

- PCBs were not detected.
- Hazardous waste characteristics were not identified.

4. ADJOINING PROPERTIES AND SURROUNDING AREA

The following sections describe current and historical uses of and database listings for adjoining properties and the surrounding area.

4.1 Current Use of Adjoining Properties and Surrounding Area

The current use of adjoining and surrounding properties is summarized in Table 4-1.

Table 4-1 Current Use of Adjoining Properties and Surrounding Area

Direction	Adjoining Properties	Surrounding Area
North	NY-5S followed by a commercial warehouse and distribution facility (1800 NY-5S), undeveloped land (NY-5S, and Broadway Extended), and a residential property (103 Joann Way).	Agricultural, industrial, and residential properties
East	Agricultural property (Mead Road) and Mead Road followed by an agricultural property (Mead Road).	Agricultural and residential properties
Southeast	Agricultural and residential property (176 Mead Road)	Agricultural and residential properties
South	NYS Thruway (Interstate 90) followed by agricultural properties (Sager Road, Snooks Corners Road).	Agricultural and residential properties
West	DAB4 Amazon Delivery Distribution Warehouse (1785 NY-5S)	Commercial and industrial properties

Langan did not observe obvious conditions likely to represent environmental concerns for the subject property from current uses of adjoining or surrounding properties.

4.2 Adjoining Properties and Surrounding Area History

Langan compiled the following summaries of the adjoining properties and surrounding area history based on a review of historical resources and interviews. Historical resources are provided in Appendix F.

Table 4-2 Historical Use of Adjoining Properties

Direction	Adjoining Properties
North	The north-adjoining properties are depicted as undeveloped on 1895 USGS Topographic Maps. By 1942, NY-5S is depicted to the north of the subject property, and several buildings and agricultural land are shown to the north of NY-5S (Aerial Photographs). The north-adjoining properties appears relatively unchanged from 1942 to 2005 (Aerial Photographs, Google Earth Imagery). By 2006, the former buildings along NY-5S are no longer depicted, the north-adjoining commercial warehouse and distribution facility is shown, and the residential building at 103 Joann Way is shown in its current configuration (Aerial Photographs, Google Earth Imagery). By 2011, the commercial warehouse and distribution facility at 1800 NY-5S appears expanded to the east and is shown in its current configuration (Aerial Photographs, Google Earth Imagery). The configuration of the north-adjoining properties appears relatively unchanged from 2011 to present day. Database listings associated with the north-adjoining property are discussed in Section 4.3.
East	Mead Road is depicted to the east of the subject property as early as 1895. The east-adjoining properties are depicted as undeveloped on USGS Topographic Maps in the late 1800s. By 1966, the east-adjoining agricultural property at Mead Road is depicted in its current configuration (Aerial Photographs). The configuration of the east-adjoining properties appears relatively unchanged from 1966 to present day (Aerial Photographs and Google Earth Imagery). Langan does not consider the historical use of the east-adjoining properties an environmental concern for the subject property.
Southeast	The southeast-adjoining property is depicted as undeveloped on USGS Topographic Maps in the late 1800s. By 1942, the southeast-adjoining property appears developed as a farmstead (Aerial Photographs). The southeast-adjoining property remains relatively unchanged through 2019 (Aerial Photographs and Google Earth Imagery). Langan does not consider the historical use of the southeast-adjoining properties an environmental concern for the subject property.
South	The south-adjoining property is depicted as undeveloped or agricultural land on USGS Topographic Maps in the late 1800s. By 1954, the NYS Thruway (Interstate 90) is depicted to the south of the subject property (USGS Topographic Map). The south-adjoining property remains relatively unchanged through 2019 (Aerial Photographs and Google Earth Imagery). Database listings associated with the south-adjoining property are discussed in Section 4.3.
West	The west-adjoining property is depicted as undeveloped or agricultural land on USGS Topographic Maps in the late 1800s. By 1942, several structures are shown on the west-adjoining property (Aerial Photographs). The west-adjoining property remains relatively unchanged through 2005. In 2006 earthwork is apparent at the west-adjoining property, and by 2020 the west-adjoining property appears developed with its current commercial building configuration (Aerial Photographs and Google Earth Imagery). Database listings associated with the west-adjoining property are discussed in Section 4.3.

The adjoining properties and surrounded areas were undeveloped or consisted of agricultural land in the late 1890s to the early 1900s. By 1942, the adjoining and surrounding areas were predominantly developed as agricultural land and farmsteads. Construction of residential buildings in the surrounding areas to the north, east, and south of the subject property began in

the late 1980s and continued through to the early 2000s. Construction of commercial buildings in the adjoining and surrounding area to the north and west began in 1990s and continued through to the 2020s. The adjoining and surrounding areas to the south remained undeveloped and/or agricultural land to the present day.

Langan does not consider the historical uses of the surrounding area properties an environmental concern for the subject property.

4.3 Regulatory Database Review

Langan reviewed the environmental database report to evaluate if adjoining or surrounding area properties identified in the database report are suspected to represent an environmental concern for the subject property (see Section 8.2). Langan did not consider review of regulatory agency files necessary to evaluate potential RECs for the subject property unless discussed in Section 4.3.1 or 4.3.2 below.

4.3.1 Adjoining Properties

Database listings for adjoining properties are summarized as follows.

North-Adjoining – Target Distribution Center (1800 State Highway 5S – inferred upgradient)

This facility is not listed in the EDR radius report; however, Langan identified listings for the property during a review of the US EPA Enforcement and Compliance History Online (ECHO) and Envirofacts databases. According to these databases, this facility is listed as an active RCRA Large Quantity Generator under the US EPA ID NYR000133959 with associated waste codes D001 (ignitable waste), D002 (corrosive waste), D005 (barium), D006 (cadmium), D007 (chromium), D008 (lead), D011 (silver), D018 (benzene), D035 (methyl ethyl ketone), U002 (acetone), and U154 (methanol). According to the ECHO database two violations were identified on 28 August 2017. The violations fall under the Statute of RCRA and include 273.B: Universal Waste – Small Quality Handlers, and 262.C: Generators – Pre-transport. Both violations achieved compliance on 28 August 2017.

In addition to these federal database listings, Langan identified the north-adjoining facility on the NYSDEC PBS database under PBS No. 4-601039 as an active facility. Seven ASTs ranging in size from 500 to 1,000 gallons containing diesel are present at this facility.

Although not identified in the EDR Report or the NYSDEC Spill Incidents online database, based on previous reports (Section 3.3), 16 spills were reported for this facility between 2009 and 2016. The spills were addressed to the satisfaction of the NYSDEC and were subsequently closed.

Based on the absence of active violations and regulatory status of the documented releases, this facility is not considered a REC.

Western Adjoining – Last Mile Distribution (1785 NYS Route 5S – inferred upgradient)

This facility is listed in the State Pollutant Discharge Elimination System (SPDES) database. The SPDES class description is construction. No additional information is provided.

Although not identified in the database, based on previous reports (Section 3.3), this facility is listed in the NY SPILLS database under the Spill No. 1406532 due to a release of diesel fuel on September 19, 2014. The database listing indicates that a 5-gallon spill from a broken fuel line on a refrigeration truck was reported at the Site. The NYSDEC determined that the staining at this property indicated a larger release and required further investigation. A spill incident report

published after remediation of the property estimated that 30 gallons of diesel fuel was released. Impacted material was excavated and disposed off-site. A spill report indicated that no end point sampling was completed in conjunction with the excavation of impacted material. After receiving the disposal documentation, NYSDEC issued a No Further Action (NFA) letter for the case in 2015 and the spill was closed on February 18, 2015.

Based on the regulatory status (NFA), this facility is not considered a REC.

South-Adjoining - Floridale Farm (176 Mead Road – inferred downgradient)

The south-adjoining facility is listed in the PBS AST database under PBS No. 4-600621 as an unregulated/closed site with the name of Floridale Farm. The PBS database indicates a 3,000-gallon diesel UST was installed in 1998 and closed-removed in 2001 and a 300-gallon gasoline UST was removed in 2001. The PBS notes indicate the two tanks were aboveground; however, the base of both tanks were in contact with soil not allowing for visual inspection. No spills or violations were reported in association with the former tanks.

Based on the closed and removed status of the tanks and absence of spills and violations, this facility is not a REC.

4.3.2 Surrounding Area

Langan evaluated each of the database listings for surrounding area properties (see Section 8.2). The surrounding properties do not represent an environmental concern for the subject property at this time.

5. CONCLUSIONS, FINDINGS, AND OPINIONS

Langan completed a Phase I ESA consistent with the scope and limitations of ASTM E1527-21 for the MSV1 property at NY-5S in Florida, Montgomery County, New York. Exceptions to, or deletions from, ASTM E1527-21 are described in Section 8 of this report. Table 5-1 presents the conclusions of the Phase I ESA.

Table 5-1 Conclusions, Findings, and Opinions

RECs
Langan did not identify RECs.
CRECs
Langan did not identify CRECs.
HRECs
Langan did not identify HRECs.
De Minimis Conditions
Langan did not identify de minimis conditions.
Significant Data Gaps
Langan did not identify significant data gaps.

6. ENVIRONMENTAL PROFESSIONAL STATEMENT

Résumés outlining the qualifications of the project team are included in Appendix G.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and I have the specific qualifications based on my education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Anna Statkiewicz
Senior Project Scientist

8. LIMITATIONS AND DEFINITIONS

This Phase I ESA report was prepared for Client and is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. The Client is the sole intended beneficiary of the report. The user requested no special terms or conditions regarding this Phase I ESA.

Langan's scope of services, which is described in Section 1.2 and in the contract executed between Langan and the Client, was limited to that agreed to with the Client/user and no other services beyond those explicitly stated are implied. To the extent possible, the services performed and agreed upon for this Phase I ESA are consistent with the guidelines of ASTM E1527-21.

This report is not intended to be an exhaustive assessment of the subject property. The purpose of the Phase I ESA is to reduce uncertainty about unknown conditions at the subject property. No environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a subject property. Therefore, Langan cannot "verify", "insure", "certify", or "guarantee" that the subject property is free of environmental concerns.

No expressed or implied representation or warranty is included or intended in this report, except that our services were completed using the care and skill ordinarily followed by professionals providing similar services under similar circumstances in similar locations at the same point in time.

The conclusions provided in this report are based solely on information obtained through completing the standard activities required by ASTM E1527-21 and are intended exclusively for the purpose stated herein, at the specified subject property, as it existed at the point in time the assessment was completed. The conclusions provided in this report do not apply to conditions and features of which Langan was not made aware of through good faith efforts to complete the activities required by ASTM E1527-21 and did not have the opportunity to evaluate.

8.1 ASTM Definitions

The following definitions are provided in ASTM E1527-21 and presented below for reference. This section is not a comprehensive list of definitions provided in ASTM E1527-21 and is intended to summarize those pertinent to this Phase I ESA report.

Activity and use limitations (AUL): legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effective-ness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

Adjoining properties: any real property or properties the border of which is contiguous partially contiguous with that of the subject property, or that would be contiguous or partially contiguous with that of the subject property but for a street, road, or other public thoroughfare separating them.

All Appropriate Inquiries: that inquiry constituting all appropriate inquiries into the previous ownership and uses of the subject property consistent with good commercial and customary practice as defined in CERCLA, 42 U.S.C.§ 9601(35)(B) and 40 C.F.R. Part 312, that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the LLPs to CERCLA liability (42U.S.C. §§ 9601(35)(A) & (B), § 9607(b)(3), § 9607(q), and§ 9607(r)), assuming compliance with other elements of the defense.

Approximate minimum search distance: the area for which records must be obtained and reviewed pursuant to ASTM E1527-21 Section 8 subject to the limitations provided in that section. This may include areas outside the subject property and shall be measured from the nearest subject property boundary. This term is used in lieu of radius to include irregularly shaped properties.

Controlled recognized environmental condition (CREC): recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

Data gap: a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to, site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

De minimis condition: a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be a de minimis condition is not a recognized environmental condition nor a controlled recognized environmental condition.

Engineering controls: physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on a property. Engineering controls are a type of activity and use limitation (AUL).

Environment: environment shall have the same meaning as the definition of environment in CERCLA 42 U.S.C. § 9601(8).

Historical recognized environmental condition (HREC): previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).A historical recognized environmental condition is not a recognized environmental condition.

Institutional controls (IC): a legal or administrative mechanism (for example, "deed restrictions," restrictive covenants, easements, or zoning) on the use of, or access to, a site or facility to (1) reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. An institutional control is a type of activity and use limitation (AUL).

Key site manager: the person identified by the owner or operator of a subject property as having good knowledge of the uses and physical characteristics of the subject property.

Material threat: obvious threat which is likely to lead to a release and that, in the opinion of the environmental professional, would likely result in impact to public health or the environment.

Obvious: that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer.

Property use limitation: limitation or restriction on current or future use of a property in connection with a response to a release, in accordance with the applicable regulatory authority or authorities

that allows hazardous sub-stances or petroleum products to remain in place at concentrations exceeding unrestricted use criteria.

Reasonably ascertainable: information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.

Recognized environmental conditions: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. For the purposes of this definition, "likely" is that which is neither certain nor proved, but can be expected or believed by a reasonable observer based on the logic and/or experience of the environmental professional, and/or available evidence, as stated in the report to support the opinions given therein.

Release: a release of any hazardous substance or petroleum product shall have the same meaning as the definition of "release" in CERCLA 42 U.S.C. § 9601(22). There are a number of statutory exclusions from the definition of release that may impact the environmental professional's opinions and conclusions, such as the normal application of fertilizer.

Significant data gap: a data gap that affects the ability of the environmental professional to identify a recognized environmental condition.

Site reconnaissance: that part that is contained in Section 9 of ASTM E1527-21 and addresses what should be done in connection with the site visit. The site reconnaissance includes, but is not limited to, the site visit done in connection with such a Phase I Environmental Site Assessment.

Site visit: the visit of the subject property during which observations are made constituting the site reconnaissance section of this practice.

Subject property: the property that is the subject of the environmental site assessment described in this practice.

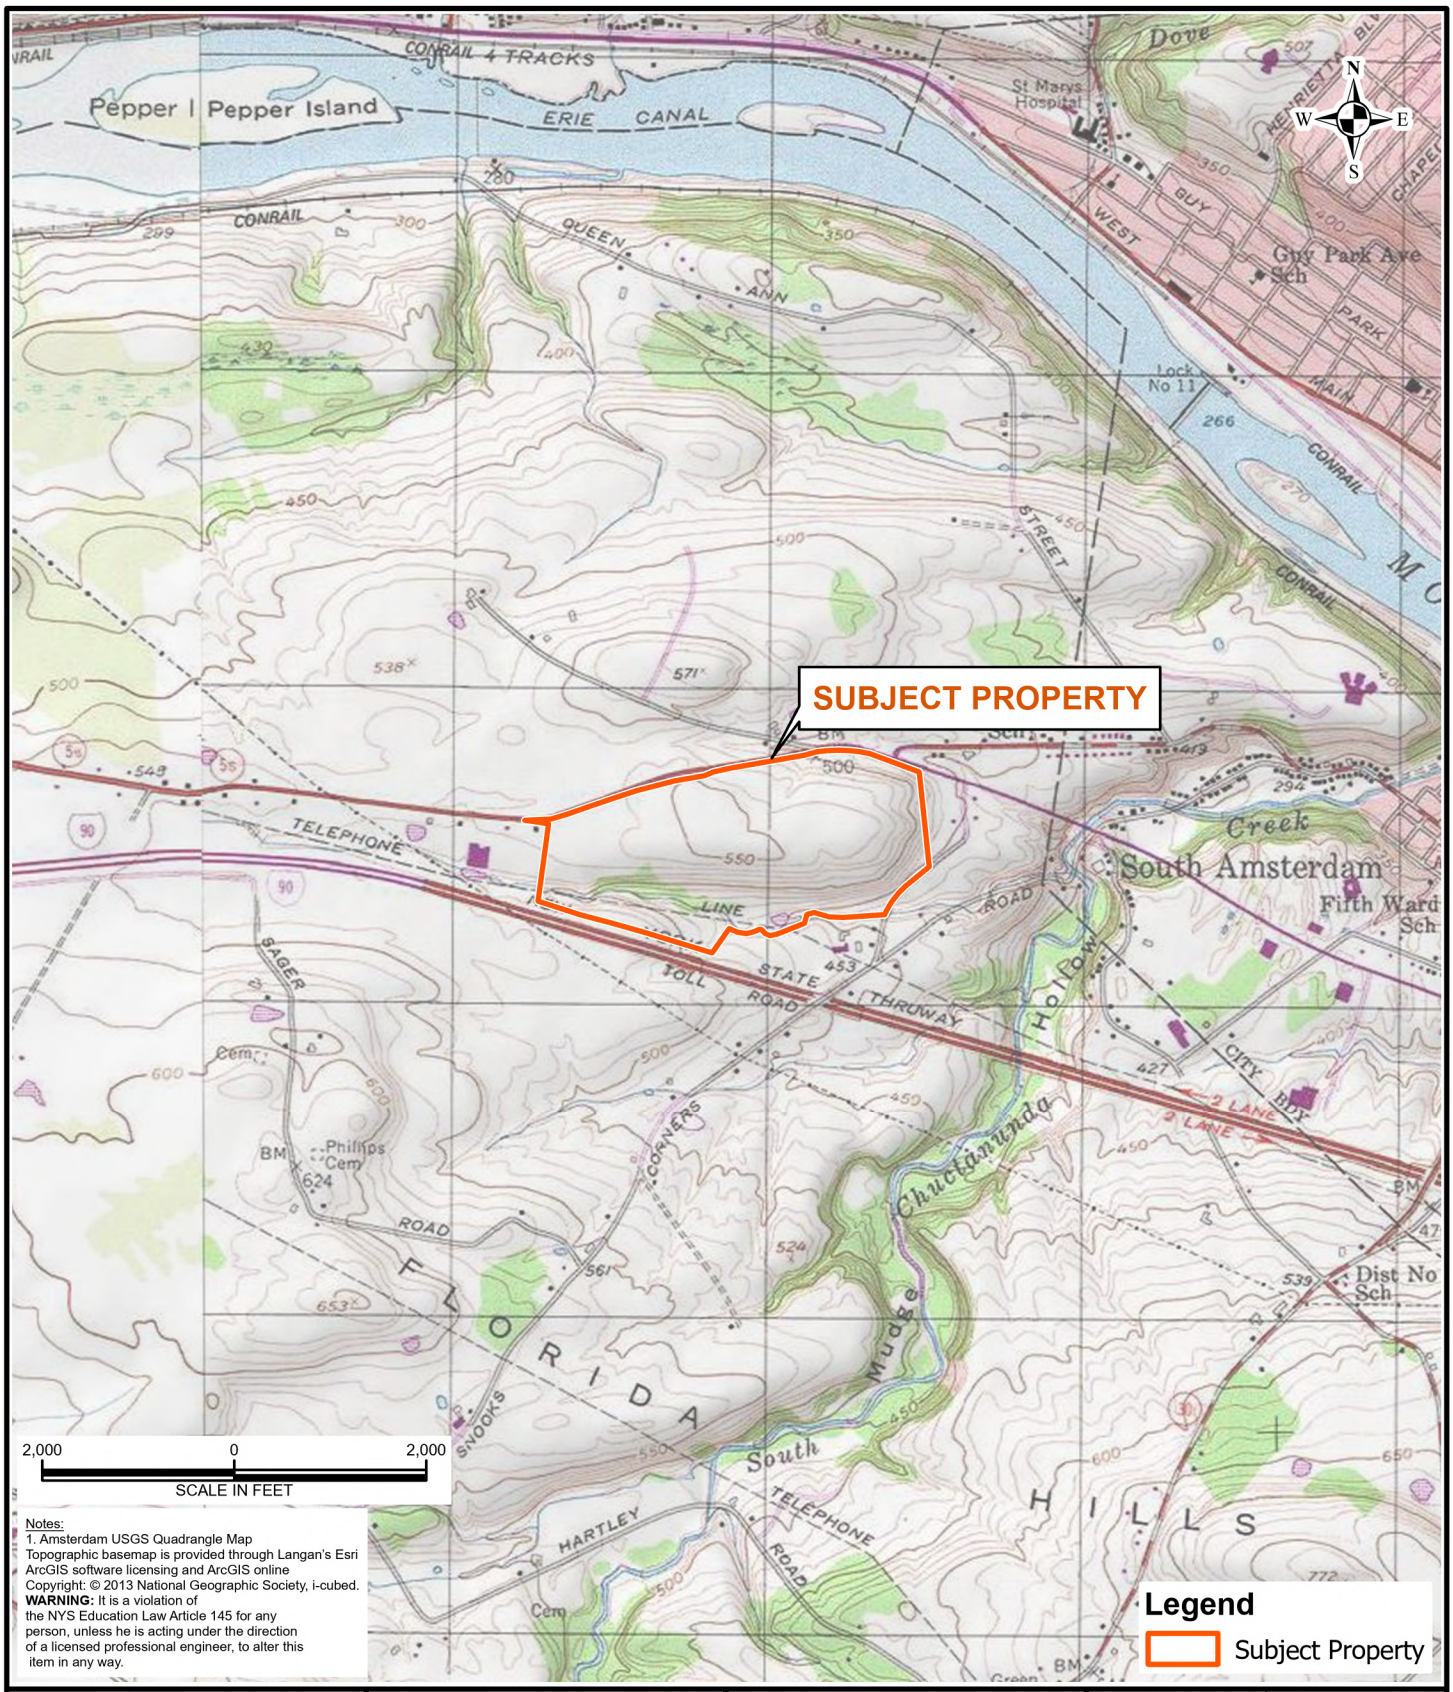
User: the party seeking to use ASTM E1527-21 to complete an environmental site assessment of the subject property.

8.2 Standard Environmental Record Sources

Langan reviewed an environmental database search report prepared by an environmental database search provider for the subject property and surrounding area. The database search report includes a listing of properties identified on select federal, state, local and tribal standard source environmental databases within the approximate minimum search radii outlined in ASTM E1527-21. This information was supplied to Langan by the environmental database search provider, and to the environmental database search provider by government sources; therefore, neither Langan nor the environmental database search provider can verify the completeness and accuracy of the database information. Appendix C contains a copy of the report, with specific source and property descriptions, and the dates of the last update for each database searched. Langan reviewed the database search report on a record-by-record basis to evaluate if certain properties identified in the database report are likely to represent an environmental concern for the subject property. The evaluation criteria included factors such as distance, groundwater

gradient, nature of the listing, and regulatory status. Unless specifically discussed in the body of this report, the facilities listed on the database do not appear to represent an environmental concern to the subject property.

8.3 Limiting Conditions/Deviations



Langan was unable to observe the ground surface throughout the subject property due to snow cover. This limiting condition did not impact Langan's conclusions based on review of aerial photographs.

Langan did not delete or deviate from the ASTM E1527-21 guidelines during this Phase I ESA.

8.4 Data Gaps

Langan did not identify significant data gaps.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LF ---------- Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 07/30/2024 has revealed that there are 2 NY Spills sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
POLE TOP NAT GRID RT	1767 ST HIGHWAY 5S	WNW 0 - 1/8 (0.024 mi.)	2	11
Spill Number/Closed Date: 1110405 / 2012-03-06				
Site ID: 458240				
Spill Date: 2011-11-22				

Lower Elevation	Address	Direction / Distance	Map ID	Page
NYS TWY MP 175.3 TRU	NYS TWY MP 175.3 I-9	SSW 0 - 1/8 (0.043 mi.)	3	13

EXECUTIVE SUMMARY

Spill Number/Closed Date: 9203815 / 1992-08-03
Site ID: 220982
Spill Date: 1992-07-01

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MONTGOMERY CO - FORM EPA ID:: NYR000092726	***250 HIRSHFIELD RD***	***NNW 0 - 1/8 (0.068 mi.)***	***4***	***14***

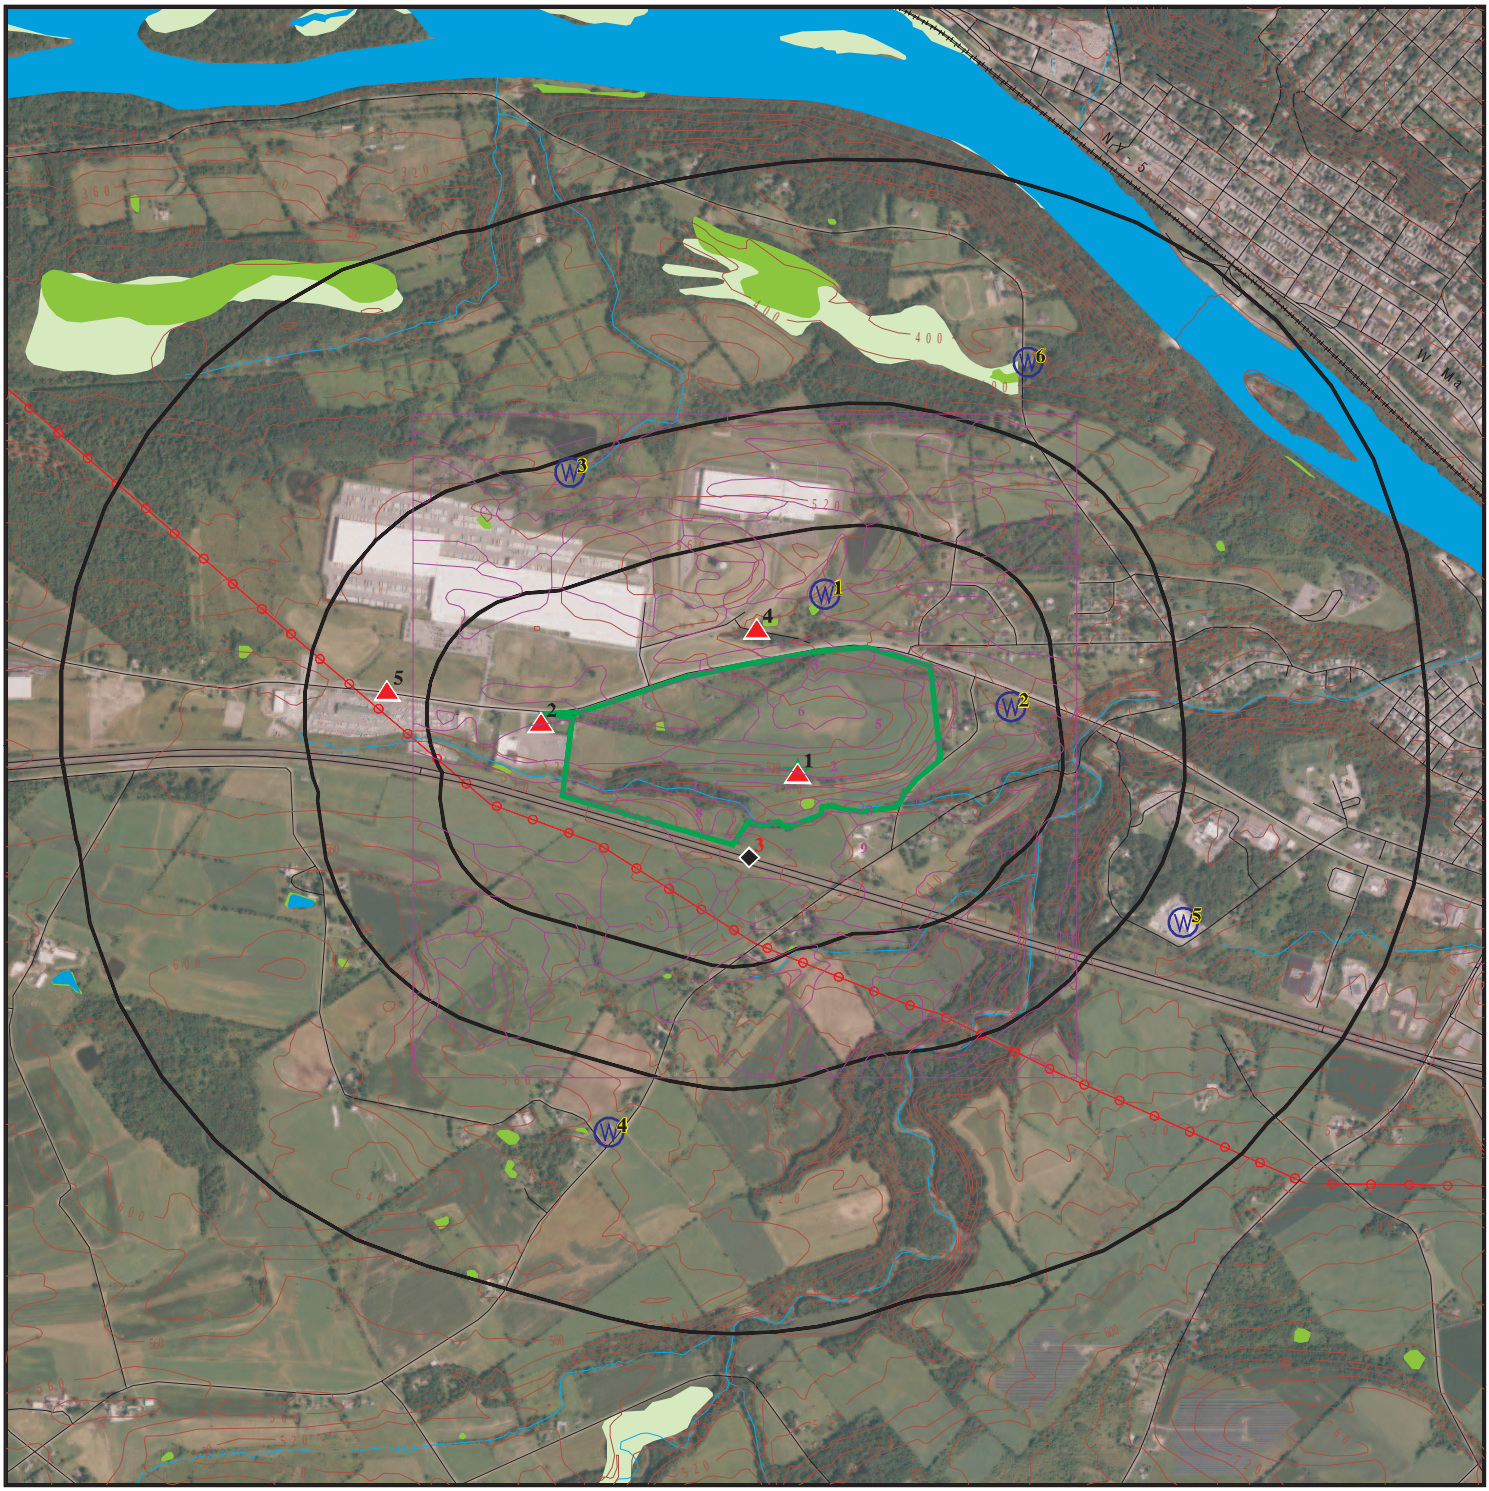
HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 HSWDS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AMSTERDAM TERMINAL	RT. 5S	WNW 1/4 - 1/2 (0.334 mi.)	5	18

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the MANIFEST list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 MANIFEST site within approximately 0.25 miles of the target property.



Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MONTGOMERY CO - FORM EPA ID: NYR000092726	***250 HIRSHFIELD RD***	***NNW 0 - 1/8 (0.068 mi.)***	***4***	***14***

DEC Memo:	11/23/11 - Large 15 kva box transformer located outside abandoned warehouse building on south side of Rt 5S. Property recently purchased and being renovated. NG planned to re-energize transformer, upon inspection found it to be leaking non-PCB oil to the ground following underground conduits. Removed transformer, will be installing new today or Friday. EPS called to clean up. Vac truck on site to dewater excavation that resulted from the removal of the transformer and foundation. EPS then removed approximately 5 yards of impacted soil and stockpiled/covered on the property for later disposal. Remaining excavation filled with water, no sheen noticed this morning. No further action anticipated other than disposal of stockpiled soil. Area now served with muni water and sanitary sewer. BB 3/6/12 - Disposal complete, closed. BB
Remarks:	soil and roadway/unknown if PCB, clean up underway

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

SPILLS 80: SPILLS80 data from FirstSearch

Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database
EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City?s Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

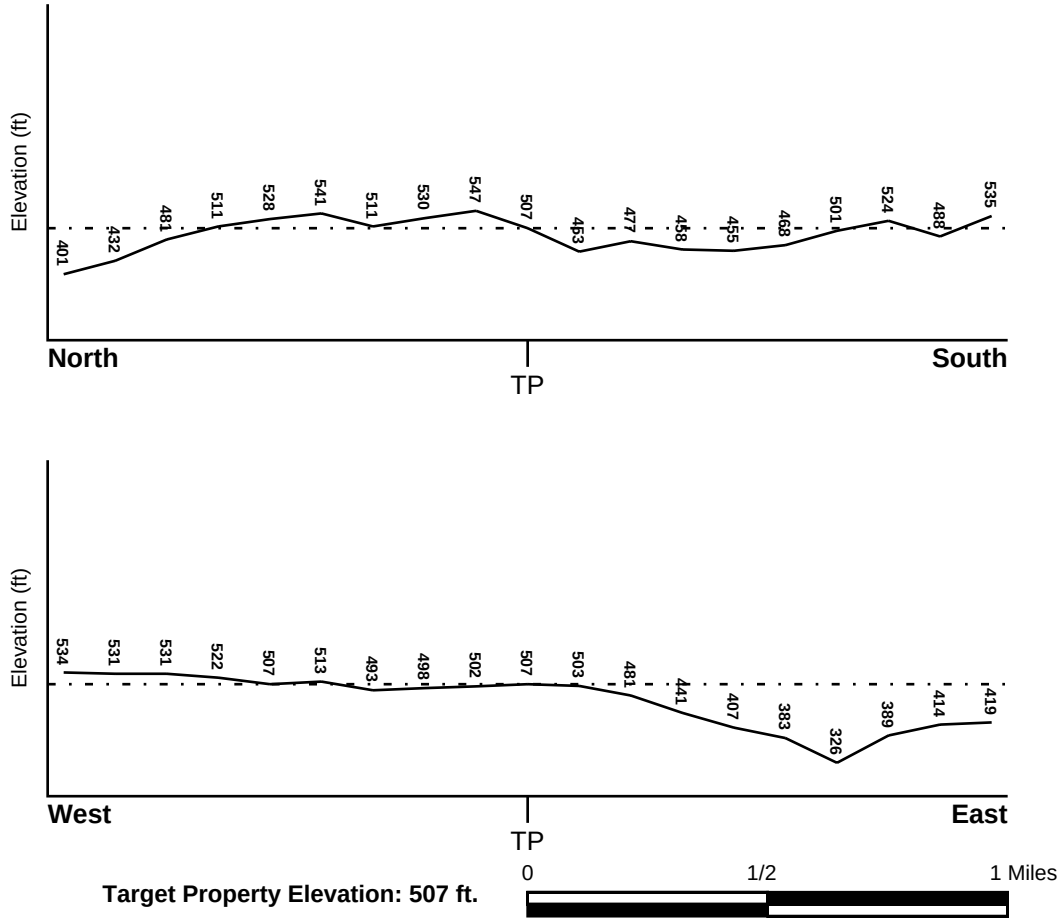
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Palatine

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Subject: FOIL - 176 Mead Road

Dear Sir or Madam:

Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et seq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions on the above property, such as environmental permits, notices of violations, spill/discharge incidents, storage or disposal of hazardous substances, Underground Storage Tanks (UST), Leaking Underground Storage Tanks (LTANK), asbestos abatement, and any other environmental reports that your department may have.

The Subject Property is located at **176 Mead Road** in **Florida, New York**. The Subject Property is identified as Parcels 54.-1-36, 54.-1-37, 55.-1-1.1, 55.-2-4.1, 54.-1-35.11, 54.-1-35.121, 54.-1-35.131, 54.-1-35.141, 54.-1-35.151, and 54.-1-35.161. The Subject Property is bound to the north by NY-5S; to the east by Mead Road and agricultural land; to the south by a dairy farm, agricultural land, residential properties, and New York State Thruway (NYS Thruway); and to the west by a warehouse (DAB4 - 1785 State Highway 5S, Amsterdam, New York).

Please contact me at 914-323-7432 with any questions or send your response to my attention at lgrose@langan.com or at the below address:

Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.
1 North Broadway
Suite 910
White Plains, New York 10601

Thank you in advance for your cooperation.

Sincerely,

Laura Grose

Re: Phase I Environmental Site Assessment
10 Parcels Along State Highway 5S and Mead Road
Florida, New York 12010

Dear Mr. Grant:

Tetra Tech is pleased to submit this Phase I Environmental Site Assessment for the ten properties located along State Highway 5S and Mead Road in Florida, New York (the Site). This investigation included a review of the Site history, a Site reconnaissance visit, interviews, and a review of local and regulatory files pertaining to the Site and surrounding area. This report consists of two parts: a summary which presents a narrative of our findings and recommendations, followed by a detailed description of the research conducted.

We appreciate the opportunity to provide these services to you. Please contact us if you have any questions regarding this project.

Very truly yours,

Ian S. Cannan, CHMM

1.0 SUMMARY OF FINDINGS

Tetra Tech, Inc. evaluated the ten properties located along State Highway 5S and Mead Road in Florida, New York (the Site) for evidence of Recognized Environmental Conditions (RECs), which are defined by ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The objective of the Phase I study was to render an opinion as to whether there is evidence of RECs in connection with the property.

SITE DESCRIPTION

The Site is comprised of ten individual parcels of land located in the Town of Florida, New York. Three of the parcels (Assessor Parcels 54.-1-35-11, -121, and -161) are undeveloped vacant rural land. Assessor Parcel 54.-1-36 is undeveloped vacant industrial land. Two parcels are single family residences (Assessor Parcels 54.-1-35-131 and -151). An active dairy farm is located at Assessor Parcel 55.-1-1.1. Assessor Parcels 54.-1-37 and 55.-2-4.1 are currently used for the cultivation of crops. Finally, Assessor Parcel 54.-1-35.141 is a vacant former farm stand or garden center.

SITE HISTORY

The Site history was established back to approximately 1890, when a residence was constructed at 176 Mead Road (Assessor Parcel 55-1-1.1). The Site and surrounding lands were likely associated with agricultural or similar low intensity use from the late 1800s to the late 1980s. In the late 1980s and early 1990s residences were constructed at 1733 and 1711 State Highway 5S. Subsequently a farm stand was established Assessor Parcel 54.-1-35.141 in approximately 1999 and was active for a few years and is believed to have ceased operations in the mid-2000s. In the late 1990s or early 2000s municipal water and sewerage were made available during development of the surrounding area for commercial use.

REVIEW OF REGULATORY RECORDS

A review of standard state and federal environmental record sources pertaining to the Site and surrounding area was conducted using the Environmental Database Resources (EDR) database service. The EDR report was issued on November 2, 2018, using the minimum search distances recommended in the ASTM Standard. The local regulatory review included a New York Freedom of Information Law request to review files at the County of Montgomery and Town of Florida offices. As of the date of this report no response from the Town of Florida has been provided. The County of Montgomery responded that they do not have relevant records and that the Town of Florida is the Records Access Officer for the subject properties.

The Site was not identified in the federal or state databases reviewed.

Several properties were identified in the surrounding area in the state spills database involving the releases of relatively small quantities of oil.

The property identified as 176 Mead Road (Assessor Parcel 55.-1-1.1), also identified as the Floridale Farm, is associated with the NYDEC Petroleum Bulk Storage (PBS) program for three above-ground

petroleum storage tanks. Based on the Site visit the portion of 176 Mead Road that was subject to the PBS program abuts the Site to the South. The PBS listing indicates that this facility included one 3,000-gallon diesel AST and one 300-gallon gasoline AST. Both of these petroleum AST were closed in March 2001. There are no records of spills or releases or petroleum associated with this facility. Therefore, this incident does not represent at REC or HREC at the Site.

This property is identified as RD#1 in Amsterdam, NY, and is located approximately 2,000 feet west of and potentially upgradient from the Site. This facility is found on the list of known or suspected hazardous substance waste disposal sites, which also includes delisted Inactive Hazardous Waste Disposal Sites and non-registry sites where EPA Preliminary Assessment or Site Investigation Reports were prepared. This site is eligible to be but will not automatically become a NY State Superfund site. This listing is associated with Prelco Reality & Development Corp. and EPA ID NYD037373024. This listing does not represent a REC or HREC at the Site.

SITE RECONNAISSANCE

A Site visit was conducted on November 5, 2018 by Ian Cannan of Tetra Tech. At the time of the Site visit the skies were overcast with cool temperatures (40-50º F) and intermittent rain showers. Mr. Ernest J. Daviero (owner of 1711 State Highway 5S) and Mr. John Frasier (owner of 1733 State Highway 5S) accompanied Mr. Cannan during the portions of the Site visit on their respective properties. The unoccupied portions of the Site were visually inspected by Mr. Cannan via available access points and public roadways. The Site visit was limited by overgrown vegetation and scrub brush along the borders of developed properties and covering much of the undeveloped properties. Where accessible, crop lands (or cleared and mowed fields) were observed from public access points and interior roadways. The interior portions of crop lands (or vacant fields) were viewed from a distance due to limited accessibility. We note that Assessor Parcel 55.-1-1.1 includes fields/crops and an associated dairy farm. However, for the purpose of this report the “Site” was limited to the portion of this property that lies north of the tributary to South Chuctanunda Creek that flows easterly through this parcel. Therefore, a detailed inspection of the dairy farm operations and associated buildings was not performed as part of this Site visit.

FINDINGS AND OPINIONS

The following summarizes known or suspect environmental conditions associated with the property, including recognized environmental conditions (RECs), historical RECs, and *de minimis* conditions.

- At Assessor Parcel 54.-1-35.131 (1711 State Highway 5S) home heating oil is stored in a 250-gallon above-ground storage tank (AST) in the basement of the residence. The AST was observed to be in average condition and no visible defects or active leaks of oil were observed. This AST is not considered a REC, historical REC, or *de minimis* condition.

- The property identified as Assessor Parcel 54.-1-35-151 (1733 State Highway 5S) also has a 250-gallon home heating oil AST in the basement of the residence. The AST was observed to be in average condition and no visible defects or active leaks of oil were observed. The heating oil AST was not connected to the furnace and the connection point was capped at the bottom of the AST. During the interview Mr. Frasier indicated that the heating oil AST contains some residual oil, and at the time of the Site visit the tank was observed to be less than ¼ full. Also, during the Site reconnaissance visible oil staining was observed upon the concrete surface at the bottom of the AST. There were no strong or pungent odors from the staining and no evidence that a release had occurred from the tank. Also, the concrete floor in the area of the stain did not display

evidence of obvious cracks or conveyances to the subsurface. During the interview Mr. Frasier indicated that the staining was attributable to minor drips during replacement of the oil filter at the bottom of the AST. This AST is not considered a REC or historical REC, based on the available information and observations as documented in this report. The presence of the unused former AST with residual stored oil and residual oil staining of the concrete surface is considered a *de minimis* condition.

- A small accumulation of used tires was observed at Assessor Parcel 55.-2-4.1 at the central-eastern boundary of the property. The accumulation did not suggest the on-site disposal of solid waste or dumping. The small accumulation of tires was consistent with practices that are typical of this type of rural property. The accumulation of tires is not considered a REC, historical REC, or *de minimis* condition.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of the Site. Any exceptions to, or deletions from, this practice are described in Section 2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property**.**

RECOMMENDATIONS

There are no requirements to take response actions at the Site. The following recommendations are made:

- We recommend that the unused AST at 1733 State Highway 5S be decommissioned and removed from the property.

- We recommend that accumulated pile of apparent used tires (solid waste) be removed from Assessor Parcel 55.-2-4.1.

2.0 PURPOSE AND LIMITATIONS

PURPOSE

Tetra Tech conducted this investigation in general conformance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The purpose of the protocol is to provide a standard investigative approach that would be sufficient to provide "all appropriate inquiries into the previous ownership and uses of the property consistent with good commercial or customary practice under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)."

Tetra Tech, Inc. evaluated the ten properties located along State Highway 5S and Mead Road in Florida, New York (the Site) for evidence of Recognized Environmental Conditions (RECs), which are defined by ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on or at a property (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The objective of the Phase I study was to render an opinion as to whether there is evidence of RECs in connection with the property.

LIMITATIONS

This report is subject to the limitations outlined in Appendix A. This study and report have been prepared on behalf of and for the exclusive use of WE Acquisitions LLC solely for use in an environmental evaluation of the Site. This report and the findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without the prior written consent of Tetra Tech. However, Tetra Tech acknowledges and agrees that, subject to the Terms and Conditions of our contract dated October 31, 2018, and the Limitations provided in Appendix A, the report may be conveyed to the client's attorney, lender, title insurer, regulatory agencies, and potential purchasers associated with the proximate purchase or refinancing of the Site by our client. Tetra Tech would be pleased to discuss the conditions of dissemination of the report to additional parties associated with the transaction. The report has been prepared in accordance with the Terms and Conditions set forth in our contract dated October 31, 2018. All uses of this report are subject to, and deemed acceptance of, the conditions and restrictions contained therein. No other warranty, express or implied, is made.

EXCEPTIONS TO THE ASTM STANDARD

There were no exceptions to the ASTM standard with the exception of the following:

- At the property identified by Assessor Parcel 54.-1-35.141 a vacant building was present which was locked and inaccessible. At the time of the Site visit a representative of the owner of this property was not present to interview or obtain entry into the building. There were no strong odors, unknown pipes/vents, or other evidence of oil or hazardous substance storage or use associated with the structure. A subsequent written interview with the owner of this property was conducted and documented on a questionnaire prepared by Lori Monge. No additional information suggesting the use or storage of oil or hazardous substance was provided.

- At the property identified by Assessor Parcel 55.-2-4.1 a vacant pole barn building was present which was locked and inaccessible. At the time of the Site visit a representative of the owner of this property was not present to interview or obtain entry into the building. There were no strong odors, unknown pipes/vents, or other evidence of oil or hazardous substance storage or use associated with the structure. A subsequent written interview with the owner of this property was requested; however, at this time no response to the written questionnaire has been provided.

- For the following parcels: 54.-1-36; 55.-1-1.1; and 55.-2-4.1. interviews with the property owners were not performed. During the Site visit representatives of these owners were not available to answer questions or accompany Tetra Tech personnel. Questionnaires were provided; however, responses to the questions listed in ASTM E1527-13, Sections 10.8 and 10.9 were not provided.

- The parcel identified as 55.-1-1.1 (176 Mead Rd.) includes an apparent active working dairy farm. The limits of the Site as defined by the User of this report do not include the portion of this parcel which is the active dairy farm; however, according to current assessor records, this parcel is not sub-divided. The dairy farm portion of the 176 Mead Rd. parcel was not evaluated pursuant to ASTM E1527-13.

3.0 SITE DESCRIPTION

The Site is comprised of ten individual parcels of land located in the Town of Florida, New York. Three of the parcels (Assessor Parcels 54.-1-35-11, -121, and -161) are undeveloped vacant rural land. Assessor Parcel 54.-1-36 is undeveloped vacant industrial land. Two parcels are single family residences (Assessor Parcels 54.-1-35-131 and -151). An active dairy farm is located at Assessor Parcel 55.-1-1.1. Assessor Parcels 54.-1-37 and 55.-2-4.1 are currently used for the cultivation of crops. Finally, Assessor Parcel 54.-1-35.141 is a vacant former farm stand or garden center.

The following summarizes the parcels that comprise the Site, their current zoning designation, property size and current ownership information:

Site Address	Assessor Parcel ID	Zoning Designation	Total Size (acres)	Property Owner	Property Owner Address
St. Hwy 5S Florida, NY 12010	54.-1-35-161	314 – Rural vac <10	3.40	Vincent J. Montagnino and Pamela J. Montagnino	129 Waterstreet Rd. Amsterdam, NY12010
St. Hwy 5S Florida, NY 12010	54.-1-35.121	314 – Rural vac <10	2.50	Mark and Gina M. Johnson	140 Bieniek Dr. Fort Johnson, NY 12070
St. Hwy 5S Florida, NY 12010	54.-1-35.11	314 – Rural vac <10	2.80	Dominick J. and Mary S. Megna	16 Pershing Rd. Amsterdam, NY 12010
St. Hwy 5S Florida, NY 12010	54.-1-36	340 – Vacant Industrial	16.50	Lott Holdings, Corp.	PO Box 651 St. Hwy 5S Amsterdam, NY 12010
St. Hwy 5S Florida, NY 12010	54.-1-35.141	312 – Vac w/imprv	5.10	Miguel and Lori T. Monge	34 Kimball St. Amsterdam, NY 12010
1733 St. Hwy 5S Florida, NY 12010	54.-1-35-151	210 – 1 Family Residential	2.70	John M. Fraiser	1733 St. Hwy 5S Amsterdam, NY 12010
1711 St. Hwy 5S Florida, NY 12010	54.-1-35.131	210 – 1 Family Residential	4.60	Ernest J. and Loreen Daviero	1711 St. Hwy 5S Amsterdam, NY 12010
176 Mead Rd. Florida, NY 12010	55.-1-1.1	112 – Dairy Farm	131	Mead Brothers Properties	322 Snooks Corners Rd. Amsterdam, NY 12010

St. Hwy 5S Florida, NY 12010	54.-1-37	120 – Field Crops	10.60	Lott Holdings, Corp.	PO Box 651 St. Hwy 5S Amsterdam, NY 12010

4.0 INFORMATION PROVIDED BY USER, OWNER, KEY SITE MANAGER AND OCCUPANTS

USER

"User's Responsibilities. The purpose of this section is to describe tasks that will help identify the possibility of recognized environmental conditions in connection with the property. These tasks do not require the technical expertise of an environmental professional and are generally not performed by environmental professionals performing a Phase I Environmental Site Assessments." ASTM 1527-13

The User of the report is WE Acquisitions LLC. The User of the report was sent a questionnaire regarding their knowledge of the topics discussed in ASTM E 1527-13 Section 6.0. A copy of the completed questionnaire is in Appendix D.

The User has informed Tetra Tech of the User's knowledge of environmental cleanup liens or activity or use limitations, specialized knowledge of recognized environmental conditions, knowledge that the price of the property is significantly less than the price of comparable properties, any commonly known information within the local community regarding recognized environmental conditions at the property, or any obvious indicators that point to the presence or likely presence of contamination at the property.

The User of the study has informed us that the purpose of the ASTM environmental site assessment is for purchase of the Site.

OWNER AND KEY SITE MANAGER QUESTIONNAIRE

"The property owner and key Site manager (if any is identified) shall be asked these questions prior to the Site visit." (ASTM Standard E 1527-13).

The Property Owners were individually sent questionnaires regarding their knowledge of the topics discussed in ASTM E 1527-13 Sections 10.8 and 10.9. Section 10.8 refers to the availability of existing environmental reports or documents relating to the Site. Section 10.9 queries knowledge of regulatory, administrative or legal notices or proceedings relating to hazardous substances or petroleum products at the property. A Key Site Manager was not identified as each parcel is individually owned.

The completed questionnaires are presented in Appendix D.

INTERVIEWS WITH OWNER, KEY SITE MANAGER AND OCCUPANTS

The objective of interviews is to obtain information indicating recognized environmental conditions in connection with the property. The property owner and key Site manager shall be interviewed, as well as a reasonable number of the occupants of the property. Interviews with past owners, operators, and occupants of the property who are likely to have material information regarding the potential for contamination at the property shall be conducted to the extent that they have been identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Questions may be asked in person, by telephone, or in writing at the discretion of the environmental professional. (ASTM Standard E 1527-13)

Sources Interviewed

Owners: Mr. Ernest J. Daviero – 1711 State Highway 5S (Assessor Parcel 54.-1-35.131)

Mr. John Frasier – 1733 State Highway 5S (Assessor Parcel 54.-1-35-151)

Key Site Manager: there were no key site managers identified for the properties

Occupant(s): Mr. Ernest J. Daviero – 1711 State Highway 5S (Assessor Parcel 54.-1-35.131)

Mr. John Frasier – 1733 State Highway 5S (Assessor Parcel 54.-1-35-151)

On November 5, 2018, Mr. Ernest Daviero, the owner of the residential property located at 1711 State Highway 5S, was interviewed during the Site visit. Mr. Daviero has owned the property since approximately 1992 when it was built as a modular home. During the Site visit Mr. Daviero answered questions regarding his knowledge of the history of the property and information on the use/storage of oil or hazardous substances.

On November 5, 2018, Mr. John Frasier, the owner of the residential property located at 1733 State Highway 5S, was interviewed during the Site visit. Mr. Frasier indicated that he has owned the property for about 14 years. During the Site visit Mr. Frasier answered questions regarding his knowledge of the history of the property and information on the use/storage of oil or hazardous substances.

5.0 PHYSICAL SETTING

A current USGS 7.5 minute topographic map showing the area on which the property is located shall be reviewed, provided it is reasonably ascertainable. It is the only standard physical setting source and the only physical setting source that is required to be obtained. One or more additional sources may be obtained in the discretion of the environmental professional. (ASTM Standard E 1527-13)

TOPOGRAPHY

General Topography: The general location of the Site on a topographic map is shown on Figure 1. The majority of the Site is located near the point of a regional hill with moderate slopes downward to the north and east and steep slopes downward to the south and southeast.

Elevation: 500 to 550 feet above sea level

Nearest Surface Water Feature: The nearest surface water is a tributary to the South Chuctanunda Creek, which flows easterly along the southerly boundary of the Site. This tributary is a regulated stream per 6 NYCRR Chapter X, Subchapter B, Article 11, Part 876 – Mohawk River Drainage Basin, Item 162. The main branch of the South Chuctanunda Creek is located approximately 1,300 feet east of the Site. The South Chuctanunda Creek flows to the northeast into the Mohawk River approximately 6,000 feet east-northeast of the Site.

GEOLOGY

Bedrock Geology: According to the United States Geologic Survey Bedrock Geology map of the area, bedrock at the Site is mapped as Utica Shale from the Paleozoic era, Ordovician system of the Middle Ordovician Series. This rock is described as brownish-dark gray weathering, black, platey shale and argillite, sporadically with pyrite. During the Site visit visible rock outcrops were observed proximate to the intersection of State Highway 5S and Mead Road.

GROUNDWATER

Expected Depth to Groundwater: based on topography and nearby surface water features groundwater is estimated to occur at approximately 50 to 100 feet below the ground surface (bgs). However, localized areas of standing/perched water and ponds were observed at the Site.

Expected Groundwater Flow Direction: Based on observations during the Site visit, surrounding topography and nearby hydrogeologic features groundwater is anticipated to flow to the easterly toward Chuctanunda Creek and the Mohawk River.

6.0 SITE VISIT OBSERVATIONS
